Zollikofer (tsŏl′ĭ-kō′fĕr), Georg Joachim. Swiss pulpit orator.....1730—1788.
Zorilla (thō-rēl′yä), Manuel Ruiz. Spanish statesman.....1834—1895.
Zoroaster (zō′rō-ăs′tĕr), *or* **Zarathustra** (zä′rä-thōōs′trä). Founder of the ancient Persian religion.....fl. about 1000 B. C.
Zorrilla y Moral (thōr-rēl′yä ē mō-räl′), José. Spanish dramatist and poet.1817—1893.
Zrinyi (zrĭ′nyĭ), Niklas, Count. Hungarian general.....1508—1566.
Zschokke (tshŏk′kē), Johann Heinrich Daniel. German author.....1771—1848.
Zuccaro (tsōōk′kä-rō), *or* **Zucchero** (tsōōk′kā-rō), Federigo. Ital. painter..1543—1609.
Zuccaro, *or* **Zucchero**, Taddeo. *Bro. of Federigo.* Italian painter.....1529—1566.
Zukertort (tsōō′kĕr-tȯrt), Johannes Hermann. Polish chess player.....1842—1888.
Zuloaga (sōō-lō-ä′gä ; 268), Félix. Mexican soldier and president.....1814—1876.
Zumbusch, von (fŏn tsōōm′bōōsh), Kaspar. German sculptor.....1830 ——.
Zumpt (tsōōmpt), August Wilhelm. *Nephew of K. G.* German Latinist....1815—1877.
Zumpt, Karl Gottlob. German philologist. [*Latin Grammar.*].....1792—1849.
Zúñiga (thōōn′yē-gä). See ERCILLA Y ZÚÑIGA.
Zurbarán, de (dā thōōr′bä-rän′), Francisco. Spanish painter.....1598—1662.
Zurita (thōō-rē′tä), Jerónimo. Spanish historian.....1512—1580.
Zwinger (tsvĭng′ĕr), Theodore. *The Elder.* Swiss physician.....1533—1588.
Zwingli (*Ger. pron.* tsvĭng′lē), Ulrich *or* Huldereich. (*Lat.* **Zuin′glius.**) Swiss Protestant reformer and patriot.....1484—1531.

ARBITRARY SIGNS

USED IN

WRITING AND PRINTING.

I. ASTRONOMICAL.

1. SUN, GREATER PLANETS, ETC.

☉ *or* 🌞	The Sun; Sunday.	⊕, ⊖, *or* ♁	The Earth.
☾ *or* ☽	The Moon; Monday.	♂	Mars; Tuesday.
●	New Moon.	♃	Jupiter; Thursday.
◑, *or* ☽	First Quarter.	♄	Saturn; Saturday.
○, *or* 🌝	Full Moon.	♅, *or* ⛢	Uranus.
◐, *or* ☾	Last Quarter.	♆, *or* Ψ	Neptune.
☿	Mercury; Wednesday.	☄	Comet.
♀	Venus; Friday.	✶, *or* *	Fixed Star.

☞ Of these signs, the following sufficiently explain themselves; *viz.*: ☉, ●, ☽, ○, 🌝, ☾, ☄, and ✶. The sign ☉ represents a buckler with its boss, a natural and appropriate emblem of the sun; ☿, the caduceus of Mercury, or, according to some, his head and winged cap; ♀, a looking-glass, an attribute of Venus; ⊖, the earth and its equator; ⊕, the same, with the addition of a meridian line, or, as some think, the four quarters of the globe; ♁, the globe and cross placed in the hands of sovereigns as a symbol of power or dominion; ♂, the head, helmet, and nodding plume of a warrior, or, more probably, a shield and spear, the two chief instruments of ancient warfare; ♃, a rude and hieroglyphical representation of an eagle, — the "bird of Jove," — with expanded wings, or the initial letter of Ζευς, the Greek name of Jupiter, with a line drawn through it as a mark of abbreviation; ♄, an ancient scythe or sickle, the emblem of Saturn, the god of time; ♅, the initial letter of *Herschel*, the discoverer of Uranus, with a planet suspended from the crossbar; ♆, a sign[1] made up of that for the sun [☉], and a part of that for Mars [♂]; Ψ, a trident, the emblem of Neptune, the god of the sea.

[1] Among the old chemists, gold was symbolically represented by the sign ☉, and iron by ♂. When Uranus was discovered, the German astronomers invented the sign ♁ to denote not only the new planet, but also the then recently discovered metal platinum, which was at that time called *white gold*, and which, in its native state, is almost always combined with *iron*.

2. ASTEROIDS, OR MINOR PLANETS.

☿, *or* ⚳ Ceres; ⚴, *or* ⚵ Pallas; ♁, *or* ⚷ Juno; ⚶, *or* ⚶ Vesta.

☞ These four signs are still occasionally employed; signs devised for the other asteroids have never been much used. All are now commonly designated by numbers indicating the order of their discovery, and their symbol is a small circle or oval inclosing this number; as, ①, Ceres; ②, Pallas; ③, Juno; ④, Vesta; and the like.

3. SIGNS OF THE ZODIAC.

Spring Signs.	1. ♈ Aries, *the Ram.*	Autumn Signs.	7. ♎ Libra, *the Balance.*
	2. ♉ Taurus, *the Bull.*		8. ♏ Scorpio, *the Scorpion.*
	3. ♊ Gemini, *the Twins.*		9. ♐ Sagittarius, *the Archer.*
Summer Signs.	4. ♋ Cancer, *the Crab.*	Winter Signs.	10. ♑ Capricornus, *the Goat.*
	5. ♌ Leo, *the Lion.*		11. ♒ Aquarius, *the Water Bearer.*
	6. ♍ Virgo, *the Virgin.*		12. ♓ Pisces, *the Fishes.*

☞ The sign ♈ represents the horns of a ram; ♉, the head and horns of a bull; ♊, the ancient statues of Castor and Pollux, which consisted of two pieces of wood joined together by two crosspieces; ♋, the claws of a crab; ♌, a corruption of the Greek letter Λ, the initial of Λεων, a lion, or, less probably, a representation of a lion's tail; ♍, a corruption of παρ for παρθένος, the Greek word for *virgin*; ♎, a rude picture of a balance; ♏, the legs and tail of a scorpion, or, according to some, the tail only, including the sting and two or three of the joints nearest to it; ♐, an arrow just leaving the bow, of which a small portion is to be seen at the bottom of the character; ♑, a ligature combining the letters τρ of the Greek word τράγος, a goat; ♒, waves of water; ♓, two fishes tied together with a string.

4. ASPECTS AND NODES.

☌ Conjunction; — indicating that the bodies have the same longitude, or right ascension; as, ☿ ☌ ☉; that is, Mercury is in conjunction with the sun.

✶ Sextile; — indicating a difference of 60° in longitude, or right ascension.

⚺, *or* ☉ Quintile; — indicating a difference of 72° in longitude, or right ascension. *Rare.*

□ Quadrature; — indicating a difference of 90° in longitude, or right ascension.

△ Trine; — indicating a difference of 120° in longitude, or right ascension.

☍ Opposition; — indicating a difference of 180° in longitude, or right ascension; as, ☉ ☍ ☽; that is, the sun is in opposition to the moon.

☊ Ascending Node; — called also *dragon's head.* See DRAGON'S HEAD, 2, in *Vocab.*

☋ Descending Node; — called also *dragon's tail.* See DRAGON'S TAIL, 1, in *Vocab.*

☞ In the sign ♁, the circle represents the zodiac, or the heavens, and the little mark at the top the meeting of two bodies in the same point or place; in the sign ☍, the circles touch at points opposite to each other, or 180 degrees apart; the signs ✶, □, △, are symbolical of the derivation of the words *sextile*, *quadrature*, *trine*, from the Latin words *sex*, six, *quattuor*, four, *tres*, three, being figures composed of six, of four, and of three lines respectively; the signs ☊ and ☋ represent a dragon, and originated in the fancy of the ancient astronomers, who saw in the deviation from the ecliptic made by a planet in passing from one node to another a figure like that of a dragon, the belly being where the planet has the greatest latitude, and the head and tail the points of intersection with the ecliptic.

5. SIGNS AND ABBREVIATIONS USED IN NOTATION.

a, *or* *a* Mean distance.
α, *or* A. R. Right ascension.
β Celestial latitude.
D. Diameter.
δ Declination.
△ Distance.
E. East.
e Eccentricity.
h., *or* ʰ Hours; as, 6h., or 6ʰ.
i Inclination; especially, inclination to the ecliptic.
L, *l*, *or* *ε* Mean longitude in orbit.
λ Longitude.
M. Mass.
m., *or* ᵐ Minutes of time; as, 6m., or 6ᵐ.
μ, *or* *n* Mean angular motion in unit of time.
+, *or* N. North.
N. P. D. North polar distance.
ν, *Ω*, *or* L. Longitude of ascending node.
π *or* *ω* Longitude of perihelion.
q. Perihelion distance.
ρ, *or* R. Radius, or radius vector.
—, *or* S. South.
s, *or* ˢ Seconds of time; as, 10s., or 10ˢ.
T. Time; periodic time.
W. West.
φ (*a*) Angle of eccentricity, or the angle whose sine is equal to *e*; (*b*) Geographical latitude.
° Degrees.
′ Minutes of arc.
″ Seconds of arc.
☉ Sun's longitude.
☽ Moon's longitude.

II. BOTANICAL.

①, ☉, ○, *or* ① An annual plant.
♂, ☉☉, ②, *or* ② A biennial plant.
♃ A perennial herb.
△ An evergreen plant. [*R.*]
☉ A monocarpous plant; that is, a plant, whether annual or biennial, that flowers but once.
♄ An undershrub, or suffruticose plant.
♅ A shrub.
♆ A large shrub, almost a tree.
♇ A tree.
○ A monocarpous perennial plant.
☃, *or* ♂ A staminate or male flower; also, a plant bearing such flowers.
♀ A pistillate, fertile, or female flower; also, a plant bearing such flowers.
☿ A perfect or hermaphrodite flower; also, a plant bearing such flowers.
☃ ♀ Unisexual; that is, having the male and female flowers separate.
☃ — ♀ Monœcious; that is, having male and female flowers on the same plant.
☃ : ♀ Dicœcious; that is, having male and female flowers on different plants.
☿ ☃ ♀ Polygamous; that is, having hermaphrodite, or perfect, and unisexual flowers on the same or different plants.
⌒ A climbing plant.
) Turning or winding to the left.
(Turning or winding to the right.
②= Having the cotyledons accumbent, and the radicle lateral.
○ || Having the cotyledons incumbent, and the radicle dorsal.
○ » Having the cotyledons conduplicate, and the radicle dorsal.
○|| || Having the cotyledons folded twice, and the radicle dorsal.
○|| || || Having the cotyledons folded thrice, and the radicle dorsal.
∞, *or* 00 An indefinite number; when applied to stamens, more than twenty.
0 Wanting; none; indicating the absence of a part.
○ Feet.
′ Inches. ″ Lines. ☞ With European writers, the usual signs for feet, inches, and lines are respectively ′, ″, and ‴.
? indicates doubt or uncertainty respecting that to which it is affixed or prefixed; — applied to the names of genera or species, of localities, of authors cited, and the like.
! indicates certainty; — used as a mark of affirmation or authentication, as of a genus or species, and the opposite or counterpart of ?. When appended to the name of an author, it indicates that the writer has examined an authentic specimen of the plant referred to, and when appended to the name of a locality, that the writer has seen or collected specimens from that locality.
* indicates, when appended to a reference, that a good description is to be found at the place referred to. *Rare.*
† indicates doubt or uncertainty; the same as ?. *Rare.*

III. CHEMICAL.

. One equivalent of oxygen; — written above a symbol representing an element, and repeated to indicate two, three, or more atoms or equivalents; thus, F̈e denotes a compound of one atom or equivalent of oxygen with one of iron; S̈, a compound of three atoms or equivalents of oxygen with one of sulphur.

' One atom or equivalent of sulphur; — used in the same manner as the preceding; thus, F̈e denotes a compound of two atoms or equivalents of sulphur and one of iron.

☞ A dash drawn across a symbol having either of the foregoing signs above it, denotes that two atoms or equivalents of the substance represented by the symbol are joined with the number of atoms or equivalents of oxygen or sulphur indicated by the dots or commas; thus, F̈e represents a compound of two atoms or equivalents of iron and three of oxygen, forming sesquioxide of iron. All the above symbols are now practically obsolete.

+ signifies "and," "together with," and is used between the symbols of substances brought together for a reaction or produced by such reaction. Placed above a symbol or to its right above the line, it signifies a unit charge of positive electricity. Thus, Ca^{++} denotes the ion of calcium, which carries two positive charges. It is sometimes used to indicate, in organic chemistry, a base or alkaloid, when placed above the initial letter of the name of the substance; as, $\dot{M}$, morphine; $\dot{Q}$, quinine.

— signifies a single "bond," or unit of attractive force or affinity, and is used between the symbols of elements or groups which unite to form a compound; thus, H—Cl for HCl; H—O—H for H_2O; Ca=O for CaO; Al≡(OH)$_3$ for Al(OH)$_3$. Placed above a symbol, or to its right above the line, it signifies a unit charge of negative electricity; thus, SO_4^{--} denotes an ion of sulphuric acid, carrying two negative charges. It also indicates, in organic chemistry, an acid, when placed above the initial letter of the name of the acid; as, C̄, citric acid; T̄, tartaric acid. It is also sometimes used as a simple sign of subtraction to indicate the removal of a part from a compound.

′ is frequently used to indicate valence; thus, Fe″ denotes bivalent iron; Fe‴, trivalent iron.

· is sometimes used instead of — to indicate a bond; as, H·Cl for H—Cl, CH_2:CH_2 for CH_2=CH_2, etc.

⬡ in organic chemistry, denotes the benzene nucleus.

ψ Pseudo-.

☞ Every elementary substance is represented, in chemical notation, by a symbol consisting of the initial or abbreviation of its Latin or New Latin name: as, H for hydrogen, O for oxygen, Ag (from *Argentum*) for silver, and the like, each symbol when used singly always indicating a single atom of the substance represented by it; thus, O stands for one atom of oxygen, C for a single atom of carbon, and the others in like manner. See ELEMENT, *n.*, 3, in the *Vocab.* A compound body made up of single atoms of its constituents is represented by the two symbols of the respective constituents written side by side: as, HCl, a compound of one atom or equivalent of hydrogen with one of chlorine, forming hydrogen chloride. To express more than one atom or equivalent of a substance, a number is used, either prefixed to the symbol, or, more commonly, written after it, below the line; as, 2O, or O_2, two atoms of oxygen (O_2 signifies that the two atoms are united, forming a molecule, 2O does not).

A compound, as a salt, etc., is indicated by writing the symbols of its constituents one after another; as H_2O, two atoms of hydrogen united to one of oxygen to form water; $CaCO_3$, calcium carbonate; H_2SO_4, sulphuric acid. Sometimes these are written with a comma or a period between the symbols of the original compounds from which they are supposed to be derived; as, CaO,CO_2, calcium carbonate. See also FORMULA, 5, in the *Vocab.*

IV. MATHEMATICAL.

1. NUMERALS, OR NOTATION.

Arabic.	*Greek.*	*Roman.*	
0			Naught.
1	α'	I	One.
2	β'	II	Two.
3	γ'	III	Three.
4	δ'	IV *or* IIII	Four.
5	ϵ'	V	Five.
6	ς'	VI	Six.
7	ζ'	VII	Seven.
8	η'	VIII *or* IIX	Eight.
9	θ'	IX *or* VIIII	Nine.
10	ι'	X	Ten.
11	$\iota\alpha'$	XI	Eleven.
12	$\iota\beta'$	XII	Twelve.
13	$\iota\gamma'$	XIII *or* XIIV	Thirteen.
14	$\iota\delta'$	XIV *or* XIIII	Fourteen.
15	$\iota\epsilon'$	XV	Fifteen.
16	$\iota\varsigma'$	XVI	Sixteen.
17	$\iota\zeta'$	XVII	Seventeen.
18	$\iota\eta'$	XVIII *or* XIIX	Eighteen.
19	$\iota\theta'$	XIX *or* XVIIII	Nineteen.
20	κ'	XX	Twenty.
30	λ'	XXX	Thirty.
40	μ'	XL *or* XXXX	Forty.
50	ν'	L	Fifty.
60	ξ'	LX	Sixty.
70	o'	LXX	Seventy.
80	π'	LXXX *or* XXC	Eighty.
90	ϱ'	XC *or* LXXXX	Ninety.
100	ρ'	C	One hundred.
200	σ'	CC	Two hundred.
300	τ'	CCC	Three hundred.
400	υ'	CCCC	Four hundred.
500	ϕ'	D *or* IↃ	Five hundred.
600	χ'	DC *or* IↃC	Six hundred.
700	ψ'	DCC *or* IↃCC	Seven hundred.
800	ω'	DCCC *or* IↃCCC	Eight hundred.
900	$\varrho\chi'$	CM, DCCCC, *or* IↃCCCC	Nine hundred.
1,000	$\rho\alpha$	M *or* CIↃ	One thousand.
2,000	$\rho\beta$	MM *or* CIↃCIↃ	Two thousand.
1,000,000			One million.
1,000,000,000			One billion.
1909		MCMIX *or* MDCCCCIX	One thousand nine hundred and nine.

☞ The Arabic numerals are so called because first introduced into Europe by the Arabs. They were not, however, invented by that people, but were derived by them from Hindustan. The characters were originally the initial letters of the Sanskrit names for the nine digits, *one*, *two*, *three*, etc., but have undergone considerable changes of form. The cipher was originally a dot, used as a mere arbitrary sign to mark place or local value.

In the Roman notation, when any character is placed at the right hand of a larger numeral, its value is added to that of such numeral, as, VI, that is, V + I; XV, that is, X + V; MD, that is, M + D; and the like. I, X, and sometimes C, are also placed at the left hand of other and larger numerals, and when so situated their value is subtracted from that of such numerals, as, IV, that is, V − I, XC, that is C − X; and the like. Formerly the smaller figure was sometimes repeated in such a position, twice its value being in such cases subtracted from the larger; as, IIX, that is, X − II; XXC, that is, C − XX; and the like. Sometimes after the sign IↃ for D, the character Ↄ (called the *apostrophus*) was repeated one or more times, each repetition having the effect to multiply IↃ by ten; as, IↃↃ, 5,000; IↃↃↃ, 50,000; and the like. To represent numbers twice as great as these, C was repeated as many times before the stroke I, as the Ↄ was after it; as, CCIↃↃ, 10,000; CCCIↃↃↃ, 100,000; and the like. A horizontal line over a letter increases its value a thousand times; as, $\overline{\text{D}} = 500{,}000$. The origin of the Roman numeral characters is uncertain, and various explanations of them have been given. It is generally supposed that they were originally arbitrary signs, for which the letters most nearly resembling them were afterward substituted. They are now chiefly employed in dates, headings of chapters, upon the dials of timepieces, and the like. The most usual forms in the above list stand first, those that stand after these being rare forms, or such as are only occasionally used.

2. THE RELATIONS OF QUANTITIES.

\+ Plus; and; more; indicating addition; as, $a + b = c$; that is, a added to b makes a sum equal to c; $6 + 4 = 10$; used also to indicate that figures have been omitted from the end of a number, or that the latter is approximately exact; as, the square root of 2 is 1.4142135+.

− Minus, less; indicating subtraction; as, $a - b = c$; that is, a less or diminished by b is equal to c; $6 - 4 = 2$; used also to indicate that figures have been omitted from the end of a number, and that the last retained figure has been increased by unity; as, the square root of 2 is 1.414214−.

±, *or* ∓ Plus or minus; ambiguous; indicating that the number or quantity to which it is prefixed may have either of the signs + or −; as, the square root of $4a^2$ is $\pm 2a$.

× Multiplied by; times, into; as, $a \times b = ab$; $6 \times 4 = 24$.

☞ Multiplication is also often indicated by placing a dot between the factors, or by writing the latter, when not numerals, one after another without any sign; as, $a \times b \times c = a \,.\, b \,.\, c = abc$; $2 \times 3 \times 4 = 2 \,.\, 3 \,.\, 4 = 24$.

÷, or : Divided by; as, $a \div b$; that is, a divided by b; $6 \div 3 = 2$.

☞ Division is also very often indicated by writing the divisor under the dividend, with a line between them, or by writing the divisor after the dividend, with an oblique line between them; as, $\frac{a}{b}$; that is, a divided by b; $\frac{3}{8} = 2 \,.\, 3 \,/\, 8$ = three eighths.

⊥ Divided by; as, $a \perp b$; that is, a divided by b; $6 \perp 3 = 6 \div 3 = 2$. *Rare.*

= Is equal to, equals; as, $(a + b) \times c = ac + bc$; $6 \div 2 = 8$.

≒ Is approximately equal to; as, $\pi \fallingdotseq 3\frac{1}{7}$.

≠ Is not equal to; the contradictory of =; as $a \neq b$.

> Is greater than; as, $a > b$; that is, a is greater than b; $6 > 5$.

< Is less than; as, $a < b$; that is, a is less than b; $3 < 4$.

≮ *or* ≦ Is not less than; the contradictory of <; as, $a \not< b$; that is, a is not less than b, or, a may be equal to, or greater than, b, but cannot be less than it.

≯ *or* ≧ Is not greater than; the contradictory of >; as, $a \not> b$; that is, a is not greater than b, or, a may be equal to, or less than, b, but cannot be greater than it.

≒ Is equivalent to; applied to magnitudes or quantities which are equal in area or volume, but are not of the same form, or capable of superposition; as, $a^2 \fallingdotseq b\,c$; that is, the square whose side is a is equal to the rectangle whose sides are b and c. *Rare.*

≅ Is congruent to; as, $38 \cong 59$ (modulus 7).

⋔ Of the form of; as, $a \pitchfork (2n + 1)$; that is, the term a is of the form $2n + 1$; $17 \pitchfork (2 \times 8 + 1)$; that is, the odd number 17 is of the form $2 \times 8 + 1$. *Rare.*

⫞ Is divisible by; as, $a \fdash b$; that is, b is an exact factor of a; $8 \fdash 2$. *Rare.*

~ The difference between; used to indicate the difference between two quantities without designating which is the greater; as, $a \sim b$; that is, the difference between a and b.

−: The difference between; the same as ~. *Rare.*

∝ Varies as; is proportional to; as, $a \propto b$; that is, a varies as b, or is dependent for its value upon b.

∴ Geometrical proportion; as, $a : b :: c : d$; that is, the geometrical proportion $a : b :: c : d$. *Rare.*

∶ Is to; the ratio of;
∷ As; equals;
} used to indicate geometrical proportion; as, $a : b :: c : d$; that is, a is to b as c is to d; or, the ratio of a to b equals the ratio of c to d.

∸ Minus, the arithmetical ratio of;
∺ Equals, is equal to,
} used to indicate arithmetical proportion, as, $a \dot{-} b :: c \dot{-} d$; that is, $a - b = c - d$. *Rare.*

∞ Indefinitely great, infinite; infinity; used to denote a quantity greater than any finite or assignable quantity.

0 Indefinitely small, infinitesimal, used to denote a quantity less than any assignable quantity, also, as a numeral, naught; nothing; zero.

⌊ *or* ⌊. The continued product of numbers from one upward; the factorial; as, $4\lfloor = 4 \times 3 \times 2 \times 1 = \lfloor 4$.

∴ Therefore.

∵ Since, or because.

.... And so on.

≡ (*a*) Is identical with; as $(a + b)^2 \equiv a^2 + 2ab + b^2$. (*b*) Is congruent with. Cf. ≅ above.

⊃ Is a part of.

≂ *or* ∾ Is similar to.

∠ Angle, the angle; as, ∠ ABC = ∠ DEF, that is, the angle ABC is equal to the angle DEF; less frequently written > or >.

☞ By some geometers, the angle between two lines, as a and b, is also indicated by placing one of the letters denoting the inclosing lines over the other; as, $\frac{a}{b}$; that is, the angle between the lines a and b; $\sin \frac{a}{b}$, that is, the sine of the angle between the lines a and b.

∟ Right angle, the right angle; as, ∟ ABC; that is, the right angle ABC.

⊥ The perpendicular; perpendicular to, is perpendicular to; as, draw AB ⊥ CD, that is, draw AB perpendicular to CD.

⫽ Parallel; parallel to; is parallel to; as, AB ⫽ CD, that is, AB is parallel to CD.

≌ Equiangular; is equiangular to; as, ABCD ≌ EFGH, that is, the figure ABCD is equiangular to the figure EFGH. *Rare.*

⏤ Equilateral; is equilateral to, as, ABC ⏤ DEF; that is, the figure ABC is equilateral to the figure DEF. *Rare.*

○ Circle; circumference, 360°.

⌒ Arc of a circle; arc.

△ Triangle; the triangle, as, △ ABC = △ DEF, that is, the triangle ABC is equal to the triangle DEF.

□ Square; the square, as, □ ABCD; that is, the square ABCD.

▭ Rectangle; the rectangle; as, □ ABCD = □ EFGH, that is, the rectangle ABCD equals the rectangle EFGH.

√, *or* √‾ Root, indicating, when used without a figure placed above it, the square root; as, $\sqrt{4} = 2$; $\sqrt{4a^2} = 2a$. This symbol is called the *radical sign*. To denote any other than the square root, a figure (called the *index*) expressing the degree of the required root, is placed above the sign; as, $\sqrt[3]{a}$, $\sqrt[5]{a}$, $\sqrt[10]{a}$, etc.; that is, the cube root, fifth root, tenth root, etc., of a.

☞ This sign is merely a cursive modification of the letter *r*, which was used as an abbreviation of the Latin word *radix*, root. The root of a quantity is also denoted by a fractional index at the right-hand side of the quantity and above it, the denominator of the index expressing the degree of the root; as, $a^{\frac{1}{2}}$, $a^{\frac{1}{3}}$, $a^{\frac{1}{5}}$; that is, the square, cube, and fifth roots of a, respectively.

——— Vinculum, *or* ( ) Parentheses,
[ ] Brackets, *or* { } Braces,
} indicate that the quantities to which they are applied, or which are inclosed by them, are to be taken together; as, $x + y^2 \;\; 2\,(a + b)$, $a \times (b + c[e + d])$.

f, *or* F Function, function of; as, $y = f(x)$; that is, y is, or equals, a function of x; or as, $y = f(x, z)$, that is, y is or equals a function of x and z.

☞ Various other letters or signs are frequently used by mathematicians to indicate functions; as, ϕ, ϕ', ψ, π, Γ, [ ], and the like. Some of these are used also without the parenthesis, as, $\phi\, x$, function of x

d Differential, as, dx, that is, the differential of x.

δ Variation, as, δx; that is, the variation of x.

Δ Finite difference.

D Differential coefficient; derivative. The variable, with respect to which the differential coefficient is taken, is indicated by writing the letter designating it at the right hand below; as $\mathrm{D}_t\phi$; that is, the differential coefficient of ϕ with respect to t.

☞ The letters *d*, δ, Δ, D, and sometimes others, prefixed to quantities, are variously employed, by different mathematicians, to denote that the differentials, variations, finite differences, or differential coefficients of these quantities are to be taken; but the ordinary significations are those given above. An index is often placed at the right hand of *d*, to indicate the result of one or more repetitions of the process denoted by that sign; as, d^2x, d^3x, etc.; that is, the second, third, etc., differential of x, or the result of differentiating x two, three, etc., times.

. Fluxion; differential; as, $\dot{x}$; that is, in modern notation, dx; and also equivalent to $\frac{dx}{dt}$, where t represents time.

∫ Integral; integral of; indicating that the expression before which it is placed is to be integrated; as, $\int 2x dx = x^2$; that is, the integral of $2x dx$ is x^2. See INTEGRATION, 2.

☞ This sign is merely a modified form of S, which is itself the abbreviation of the Latin word *summa*, sum, the integral being the sum of the differentials. It is repeated to indicate that the operation of integration is to be performed twice, or three or more times, as $\iint$, $\iiint$, etc. For a number of times greater than three, an index is commonly written at the right hand above; as, $\int^m x dx^m$; that is, the mth integral, or the result of m integrations of $x dx^m$. The variable, with respect to which the integral is taken, is sometimes indicated by writing the letter designating it at the right hand below; as, $\int_\phi$, that is, the integral of ϕ with respect to x.

$\int^a$ denotes that the integral is to be taken between the value b of the variable and its value a. $\int_b^a$ denotes that the integral ends at the value a of the variable, and $\int_b$ that it begins at the value b. These forms must not be confounded with the similar one indicating repeated integration, or with that indicating the integral with respect to a particular variable.

Σ Sum; algebraic sum; the sum of all terms such as, thus, when three quantities, a, b, and c, are spoken of, $\Sigma\, ab = ab + ac + bc$; that is, $\Sigma\, ab$ is the sum of all the terms that can be formed of a, b, and c of the same kind as ab: when Σ is used to indicate the sum or summation of finite differences, it has a sense somewhat like that of the symbol $\int$.

Π Product; the continued product of all terms such as; as when three quantities a, b, and c are spoken of, $\Pi\,(a + b) = (a + b)\,(b + c)\,(c + a)$; that is, $\Pi\,(a + b)$ is the product of all the terms formed of the same kind as $a + b$. The limits of the products to be taken are indicated as in the symbol $\int$ by figures or letters placed near the top or bottom of the symbol; as, $\prod_{\frac{1}{2}}^{4} \left(1 + \frac{1}{n}\right) = \left(1 + \frac{1}{2}\right)\left(1 + \frac{1}{3}\right)\left(1 + \frac{1}{4}\right)$.

(Σ) A symbol used in abbreviations of quantics whose terms have the same numerical coefficients as a corresponding expression formed by involution; as, $(a,b,c,d \;\overline{\Sigma}\; x,y)^3$, which denotes the quantic $ax^3 + 3\,bx^2y + 3\,cxy^2 + dy^3$, the numerical coefficients of which are the same as those obtained by expanding $(x + y)^3$.

(Σ) A symbol for a quantic which has no numerical coefficients; as, $(a,b,c,d \;\overline{\Sigma}\; x,y)^3$, which denotes the quantic $ax^3 + bx^2y + cxy^2 + dy^3$.

π The number 3.14159265+; the ratio of the circumference of a circle to its diameter, of a semicircle to its radius, and of the area of a circle to the square of its radius. In a circle whose radius is unity, it is equal to the semicircumference, and hence is used to designate an arc of 180°. In a circle whose diameter is unity, it is equal to the circumference, or an arc of 360°.

e, *or* ε The number 2.7182818+; the base of the Napierian system of logarithms.

ε The eccentricity of a conic section.

M The modulus of a system of logarithms; used especially for the modulus of the common system of logarithms, the base of which is 10. In this system it is equal to 0.4342944819+.

g The force of gravity. Its value for any latitude is expressed by the formula $g =$

$32.17076\ (1 - 0.00259 \cos 2\lambda)$, in which λ is the latitude given, and 32.17076 (that is, 32.17076 feet per second) the value of g at the latitude of 45°.

° Degrees; as, 60°; that is, sixty degrees.
′ Minutes of arc; as, 30′; that is, thirty minutes.
″ Seconds of arc; as, 20″; that is, twenty seconds.
h Hours.
m Minutes.
s Seconds.
R° Radius of a circle in degrees of arc, equal to 57°.29578. *Rare.*
R′ Radius in minutes of arc, equal to 3437′.7468. *Rare.*
R″ Radius in seconds of arc, equal to 206264″.8. *Rare.*

′, ″, ‴, etc. Accents used to mark quantities of the same kind which are to be distinguished; as, a', a'', a''', a^{iv}, a^{v}, a^{vi}, etc. The accents are often written below also; as, $a_{'}$, $a_{''}$, $a_{'''}$, a_{iv}, a_{v}, etc. Figures, and also letters, are sometimes used for the same purpose; as, a^{1}, a^{2}, a^{m}, a^{n}, a_{0}, a_{2}, a_{3}, a_{m}, a_{x}, and the like.

☞ When the number of the accents would be greater than three, the corresponding Roman numerals are used instead of them; as, a^{i}, a^{ii}, a^{iii}, a^{iv}, a^{v}, a^{vi}, etc. The accents are often written below also; as, a_{i}, a_{ii}, a_{iii}, a_{iv}, a_{v}, etc. Figures, and also letters, are sometimes used for the same purpose; as, a^{1}, a^{2}, a^{m}, a^{n}, a_{0}, a_{2}, a_{3}, a_{m}, a_{x}, and the like.

^{1}, ^{2}, ^{3}, etc. Indices placed above and at the right hand of quantities to denote that they are raised to powers whose degree is indicated by the figure; as, a^{1}; that is, the first power of a; a^{2}, the square, or second power, of a; a^{3}, the cube, or third power, of a; and the like.

☞ These signs are also often used to indicate the repetition of an operation; as, $d^{2}x$, $d^{3}x$, $d^{4}x$, etc., indicating that the operation of differentiation has been performed upon x two, three, four, etc., times. As used to indicate powers, they are often preceded by the negative sign to indicate the reciprocal of the corresponding power, or an inverse operation; as, a^{-1}, a^{-2}, a^{-3}, a^{-4}, etc., which are respectively equivalent to $\frac{1}{a^{1}}$, $\frac{1}{a^{2}}$, $\frac{1}{a^{3}}$, $\frac{1}{a^{4}}$, etc.

sin x. The sine of x; that is, of the arc represented by x. In the same manner cos x, tan x, cot x, sec x, cosec x, versin x, and covers x, denote respectively the cosine, tangent, cotangent, secant, cosecant, versed sine, and coversed sine of the arc represented by x.

sin ^{-1}x. The arc whose sine is x. In the same manner cos ^{-1}x, tan ^{-1}x, cot ^{-1}x, sec ^{-1}x, cosec ^{-1}x, versin ^{-1}x, and covers ^{-1}x, are used to denote respectively the arc whose cosine, tangent, cotangent, secant, cosecant, versed sine, or coversed sine is x.

☞ This sign must not be confounded with the negative index designating the reciprocal of a quantity, which would be applied to parentheses inclosing one of these expressions; as, $(\sin x)^{-1}$, which is equivalent to $\frac{1}{\sin x}$.

sinh x. The hyperbolic sine of x.
cosh x. The hyperbolic cosine of x.

V. MEDICAL.

ā ā ā (Gr. *ἀνά*.) Of each.
℞ (L. *Recipe.*) Take.
☞ This character is reputed to have been originally the same as ♃, the symbol of Jupiter, which was placed at the top of a formula to propitiate the king of the gods, that the compound might act favorably.
S. (L. *Signa.*) Mark; used in a prescription to indicate directions to be put on the medicine package.

APOTHECARIES' WEIGHTS.

℔ Pound.
ʒ Ounce; as, ʒi, or ʒj, one ounce; ʒss, half an ounce; ʒiss or ʒjss, one ounce and a half; ʒij, two ounces, etc.
ʒ Drachm; as, ʒi, one drachm; ʒss, half a drachm; ʒiss, one drachm and a half; ʒij, two drachms, etc.
℈ Scruple; as, ℈i, one scruple; ℈ss, half a scruple; ℈iss, one scruple and a half; ℈ij, two scruples, etc.

APOTHECARIES' MEASURES.

C (L. *Congius.*) Gallon.
O, or 0 (L. *Octarius.*) Pint.
ʒ Ounce. *f*ʒ Fluid ounce.
ʒ Drachm. *f*ʒ Fluid drachm.
♏ *or* ℿ Minim, *or* drop.

VI. METEOROLOGICAL.

Rain.
Snow.
Snow on ground.
Drifting snow.
Floating ice crystals.
Hail.
Sleet.
Frostwork.
Glazed frost.
Silver thaw.
Ice storm.
Hoarfrost.
Dew.
Fog.
Damp fog, mist.
Ground fog.
Haze, dust haze.
Thunderstorm.
Thunder.
Sheet lightning.
Strong wind.
Solar corona.
Solar halo.
Lunar corona.
Lunar halo.
Rainbow.
Aurora.
Zodiacal light.

VII. MISCELLANEOUS.

&, &c, & And.
&c. (*Et cætera.*) And the rest; and so forth; and so on; and the like.

☞ The character & is a ligature combining the letters which compose the Latin word *Et*, and. In the "Old Style" ☞, these letters are distinctly visible; in the common Roman and Italic forms, they are much corrupted, but may still be recognized.

℟ Response; — used in Roman Catholic and some other service books.
℣ Versicle; — used in Roman Catholic and other service books to denote the part recited or sung by the priest, or person who presides at the office or prayers.
✳ A character used in Roman Catholic service books to divide each verse of a psalm into two parts, and show where the response begins.
✠ *or* + A sign of the cross used by the Pope, and by Roman Catholic bishops and archbishops, immediately before the subscription of their names. In Roman Catholic and some other service books, it is used in those places of the prayers and benediction where the sign of the cross is to be made.
℣ See LABARUM, also X P.
➧ Broad Arrow; a British government mark, stamped, cut, or otherwise fixed, on solid materials used in the royal ships or dockyards, in order to prevent embezzlement of naval stores; also used by British customs officers.
×, *or* + A character customarily made by persons unable to write, when they are required to execute instruments of any kind, as deeds, affidavits, etc. The name of the party is added by some one who can write; as *his mark.* *John × Smith*

Bχ_a The acute bisectrix. *Opt. Min.*
Bχ_o The obtuse bisectrix. *Opt. Min.*
μ Micron; magnetic permeability.
μμ Thousandth of a micron.
Φ Farad. *Elec.*
4to, *or* 4°. Quarto; four leaves, or eight pages, to a sheet.
8vo, *or* 8°. Octavo; eight leaves, or sixteen pages, to a sheet.
12mo, *or* 12°. Duodecimo; twelve leaves, or twenty-four pages, to a sheet.
16mo, *or* 16°. Sextodecimo; sixteen leaves, or thirty-two pages, to a sheet.
18mo, *or* 18°. Octodecimo; eighteen leaves, or thirty-six pages, to a sheet.

☞ Other sizes are 24mo, *or* 24° (Vigesimo-quarto), 32mo, *or* 32° (Trigesimo-secundo), 36mo, *or* 36° (Trigesimo-sexto), 48mo, *or* 48° (Quadrigesimo-octavo), 64mo, *or* 64° (Sexagesimo-quarto), 72mo, *or* 72° (Septuagesimo-secundo), 96mo, *or* 96° (Nonagesimo-sexto), 128mo, *or* 128° (Centesimo et vigesimo-octavo). These sizes are of rare occurrence, and are not commonly known by their Latin names, but are colloquially called twenty-four-mo, thirty-two-mo, etc., or twenty-fours, thirty-twos, etc.

7ber, September; 8ber, October; 9ber, November; 10ber, December.
♂ ♀ Male; — used in zoölogy.
Female; — used in zoölogy.
< Derived from; — used in giving etymologies.
> Whence is derived; — used in giving etymologies.
÷ And; — used in giving etymologies.
✳ Assumed or supposed, but not found or verified; — used in giving etymologies.
+ Died; — used in genealogies, etc.
— Moves to; as, Q — KB4. *Chess.*
× Takes; as, Kt × B. *Chess.*
○—○ Castles with king's rook. *Chess.*
○—○—○ Castles with queen's rook. *Chess.*
✠ Check. *Chess.*
⚅ Takes and checks. *Chess.*

VIII. MONETARY AND COMMERCIAL.

$ Dollar, *or* Dollars; as, $1; $200.
¢ Cent, *or* Cents; as, 12 ¢; 33 ¢.
₱ Peso, *or* Pesos. *Philippines.*
/ Shilling, *or* Shillings; as, 1/6 = 1s. 6d.; 2/3 = 2s. 3d.
£ Pound, *or* Pounds (sterling); as, £1; £45.
£E Egyptian pound or pounds.
R Rupee, *or* Rupees. *India.*
℔ Pound, *or* Pounds (in weight); as, 1 ℔; 24 ℔.
@ At, *or* to; as, silk @ $2 per yd.; flour per bar. $8 @ $10.50.
℔ Per; as, sheep $4 ℔ head.
% a Per cent; as, discount 6% = $10.21. b Order of.
$^{a}/_{c}$ Account; as, J. Smith in $^{a}/_{c}$ with J. Jones.
$^{B}/_{L}$ Bill of Lading.
$^{c}/_{o}$ Care of.
$^{L}/_{C}$ Letter of Credit.
$^{c}/_{f}$, *or* $^{c}/_{f}$ Carried forward.
$^{c}/_{d}$, *or* $^{c}/_{D}$ Carried down.
′ Foot, *or* Feet; as, a 40′ spar.
″ Inch, *or* Inches; as, a 10″ pipe.
× By, in dimensions; as, a room 10′ × 14′.
Number, *or* Numbered; as, # 60 thread.
✳ Used on stock tickers to denote that the quotation it follows is correct.
A 1 The designation of a first-class vessel in Lloyd's Register of British and Foreign Shipping; the letter denoting that the hull is well built and seaworthy, and the figure the efficient state of her rigging, anchors, cables, stores, etc. The figure 2 would imply that these were insufficient in quantity, or of an inferior quality. When a vessel has passed the age for the character A (four to fifteen years), it is registered A in red.
Æ The designation of a vessel of the third class, fit to convey perishable goods on short voyages only.
E The designation of a vessel fit for carrying on a voyage of any length such goods only as are not liable to sea damage.
I The designation of a vessel fit for carrying goods of the same sort on shorter voyages only.
M C Letters used to indicate that the boilers and machinery of a steam vessel have been inspected, and found to be in good order and safe working condition.
XX Ale of double strength.
XXX Ale of triple strength.

☞ The origin of the sign $ has been variously accounted for; but it is probably a modified figure 8, denoting a "piece of eight," *i. e.*, eight reals, — an old Spanish coin of the value of a dollar. It was in use long before the adoption of the Federal currency. The sign / is thought to have been originally a capital S (written thus, ſ), standing for the word *Shillings.* The character £, for Pounds sterling, is merely a capital *L* with a mark drawn across it, and represents the corresponding Latin word *Libræ*; while ℔, or pound weight, is formed from the first and third letters of the same word, connected by a similar mark. The sign @ is a graphic modification of the Latin word *ad*, meaning *at*, or *to*, or perhaps of its first letter only. ℔ is another form of *p*, the initial letter of the Latin word *per*, by. % is a cursive variation of ÷, the sign of division; thus, six per cent may be expressed by $\frac{6}{100}$, or 6 ÷ 100, or, without indicating the denominator, 6 ÷, whence, in rapid writing, 6%, or 6°/. The other characters need no explanation.

IX. MUSICAL.

Staff; the five lines with the four spaces between them, used to indicate the relative pitch of notes.

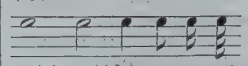
☞ When it is desired to indicate pitch higher or lower than that indicated by the staff, other lines, called *ledger lines*, are added above or below it. See LEDGER, in *Vocab.*

Bar. Double Bars.

Bar; — the line drawn perpendicularly across the staff to separate the notes into measures.

Double bar; — used to mark the larger divisions of a piece; especially, in psalm or hymn tunes, songs, and the like, to mark the end of a verse or sentence.

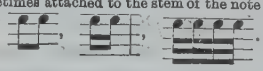
Close; — used to indicate the end of a composition.



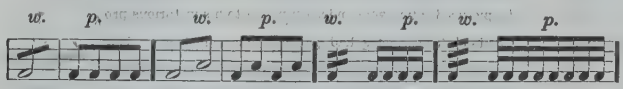
Notes characters placed upon the lines or spaces of the staff, indicating, by their form and position, the length and pitch of the tones which they represent. The notes here given are called, respectively, *semibreve*, *minim*, *crotchet*, *quaver*, *semiquaver*, and *demisemiquaver* (or *whole note*, *half note*, *quarter*, *eighth*, *sixteenth*, etc.), each figure after the first indicating a tone of one half the length of that represented by the figure immediately preceding it. A dot after a note adds to it one half of the length of the same note without the dot; thus, is equal to ; and is equal to

The stems of the notes are turned either upward or downward, as is most convenient in placing them on the staff; thus, 
Breve. Long. Large.

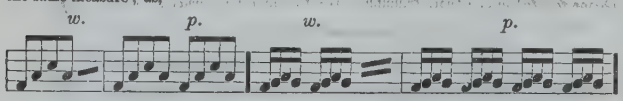
☞ Besides these, the *breve* was formerly used, it being twice the length of the semibreve. It still occurs in chorals, chants, etc. Two other characters, the *long*, equal to two breves, and the *large*, equal to two longs or four breves, and the longest note ever used, were employed in medieval music. More than three strokes are sometimes attached to the stem of the note in very minute divisions. When two or more tailed notes come together, they are often connected by the tails or strokes; as,



☞ When many notes of the same denomination are to be used in immediate repetition, a single note of larger denomination is sometimes employed, with strokes placed over it, or written across its stem, to signify that it is to be divided into quavers, semiquavers, demisemiquavers, etc., respectively, as in the following examples, where *w.* signifies *written*, and *p.*, *performed*.



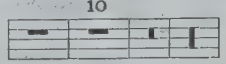
These marks are also used to direct the repetition of groups of notes preceding them in the same measure; as,

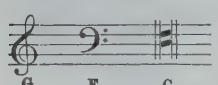


3, 5, 7, etc., are marks placed over groups of notes, and used to indicate that 3, 5, 7, etc., notes (all equal) are to be performed in the time of 2, 4, 6, etc., notes of the same kind respectively; as, and , which are performed in the same time as and respectively.

Rests; — characters indicating silence, or a pause in the performance, the length of the pause being indicated by the form of the character. Thus, the characters here given, taken in their order, indicate pauses of the same length as the following notes respectively.

☞ More than three hooks or strokes may be attached to the stems of the rests, to indicate shorter pauses corresponding to the shorter notes. Rests may be lengthened in the same manner as notes, by placing a dot or two dots after them. A rest, or pause, of a whole measure, is indicated by the mark ▬ placed upon the fourth line, the figure 1 often being written above; and to express a rest of a number of measures, the same mark is used, over it being written the number of measures included in the rest or pause. Two old long rests still sometimes occur; a short, and a longer heavy vertical mark, indicating rests respectively of two and of four measures. The following are examples:





G Clef. F Clef. C Clef.

Clefs; — characters placed upon the staff to determine the pitch indicated by its lines and spaces. They were originally written smaller, and placed upon a line or space, and they respectively designate the second line as indicating *g'*; the fourth line as indicating *f*; and the line or space inclosed as indicating *c'*. See CLEF and PITCH in *Vocab.*

♭ Flat; — used to indicate that the note before which it is placed is to be sounded lower by a half step than the same note without the sign. When placed on a line or space at the beginning of a piece, it signifies that every note on such line or space is to be sounded lower by a half step than in the natural scale.

♭♭ Double flat; — used to lower a note, already flatted, a half step.

♭♮ Single flat, as used after a double flat.

♯ Sharp; — used to indicate that the note before which it is placed is to be sounded higher by a half step than the same note without it. It is applied in the same way as the flat.

☞ The sharps or flats placed at the beginning of a piece to determine its key or tonality are called the *signature* of the piece. See SIGNATURE, in *Vocab.*

𝄪 Double sharp; — used to raise a note, already sharped, a half step.

♯♮ Single sharp, as used after a double sharp.

♮ Natural; — used to contradict, or counteract the effect of, a previous ♯ or ♭, either expressed or implied.

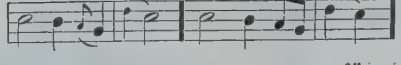
, *or*

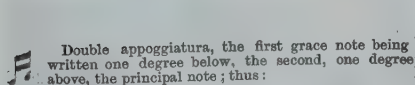
Repeat; — placed at the end of a passage to denote that it is to be performed a second time. Sometimes the dots are placed also at the beginning of the passage.

𝄴, *or* 𝄵 Characters marking common time, the former indicating two minims, the latter four crotchets in a bar. 𝄵 also marks *alla breve* time, which is a little faster.

𝄋 Sign; — used to mark the point to which reference is made, or from which the repetition of a passage is to begin.

, *or*
Long appoggiatura, or leaning note; an embellishment consisting of a grace note placed before a principal note, one step or half step either above or below the latter, and taking its time value from that of the principal note; as,



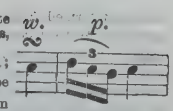


Double appoggiatura, the first grace note being written one degree below, the second, one degree above, the principal note; thus:

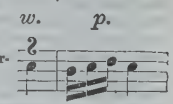
Acciaccatura, or short appoggiatura, written with a stroke across it, and performed very quickly, being, as it were, driven into the following note.

Pralltriller, or inverted mordent. See PRALLTRILLER, in *Vocab.*

∾ Turn; — indicating an embellishment consisting of the note over which the character is placed, with two auxiliary tones, performed generally as a triplet; as,

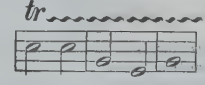


☞ When the note above is flatted, the character is written ; when the note below is sharped, it is written . It may also be written with the natural sign [♮] in place of either of these, when the corresponding note should have that sign placed before it.



Inverted turn, consisting of the same notes as the turn, performed in reverse order; as,

tr Trill; shake; — indicating that the note to which it belongs is to be rapidly alternated with the note above or below. A waving line (~~~~~) or line of dots (.....) is often added after it, indicating how far the shake is to be extended; as,



See SHAKE, *n.*, 4 a, in *Vocab.*

Arpeggio; — used in piano music, to denote that the notes of the chord before which it is written are not to be struck simultaneously, but in quick succession upward.

Pause, or hold; — indicating that the note or rest over or under which it is placed is to be prolonged at the pleasure of the performer. It is sometimes placed over the *close*, to denote that the strain which it ends forms the conclusion of the piece; as,

Crescendo; — indicating that the volume of sound is to be gradually increased.

Decrescendo; diminuendo; — indicating that the volume of sound is to be gradually diminished.

Swell; — indicating a gradual increase, or crescendo, followed by a gradual decrease, or decrescendo.

indicates a gradual decrease followed by a gradual increase of sound.

Sforzando, *or* Forzando; — indicating that the note or chord over or under which it is placed is to be struck with force and then immediately diminished in loudness; — written also ∧, *or* ∨, or indicated by the abbreviation *fz*, *sf*, *rf*, or *rfz*.

Pressure tone; — indicating that a sound begun soft is to be instantly increased to a loud tone.

Staccato; — placed over or under a note, to indicate that it is to be struck with force, and performed in a short, sharp, emphatic manner.

indicates that the note is to be performed in a manner similar to the staccato, but not so emphatically and sharply.

☞ To indicate a still lower degree of emphasis and distinctness the slur is sometimes written over the dots; as,

, *or* Slur; — the sign of legato, indicating that the notes over or under which it is placed are to be performed in a smooth, connected manner. It is also used as the tie to connect two or more notes of the same pitch which are to be sung to one syllable, or to be united into one long note.

{ Brace; — used to connect those staffs of a composition or score which are to be performed together.

Direct; — formerly placed on that line or space at the end of a staff which is occupied by the first note of the following staff, to indicate the position of the latter to the performer.

♩=80, 𝅗𝅥=60, etc. A notation used in indicating the proper tempo of a piece. Thus, ♩=80, 𝅗𝅥=60, etc., denote respectively that 80 crotchets or quarter notes, and 60 minims or half notes, are to be performed in one minute; or that each note of the kind indicated is performed in the time of one vibration of the pendulum of a metronome when the nut is set at 80, 60, etc., respectively.

✱, ⏀, *or* 𝄢 Characters used in music for the piano, directing the use of the pedals. The last two are now rare.

⁎, *or* ✕ A mark used after the preceding, and directing a discontinuance of the use of the pedals.

□, *or* ⋀ Characters sometimes used in music for the violin, the former to indicate a *down* bow, the latter an *up* bow.

△ Indicates a phrase, or incomplete musical idea.

⊐ Indicates a section, or complete but not independent idea.

○ Indicates a period, or complete and independent musical sentence.

f Forte; with a loud sound.

ff Fortissimo; with a sound louder than *forte*.

☞ *fff* indicates the loudest the voice or instrument is capable of producing.

fp Forte, piano. Same as *fz*.

fz Forzando. Same as >, ∧, ∨, or *sf*.

m Mezzo; with a sound of medium strength or loudness.

mf Mezzo forte; with a moderately loud sound.

p Piano; with a soft or low sound.

pp Pianissimo; with a sound softer than *piano*, but firm and audible.

☞ *ppp* is sometimes used to denote the extreme of softness in sound.

rf, or *rfz* Rinforzando. Same as >, *fz*, or *sf*.

sf Sforzando. See > and *fs*.

6 4 7 / 5 3 ♯ etc., etc. Figures beneath or above the notes in a bass part, indicating the harmony in the higher parts; — called variously *figured bass*, *thorough bass*, and *basso continuo*. See THOROUGH-BASS, in *Vocab.*

X. TYPOGRAPHICAL.

§ Section.
‖ Parallels.
¶ Paragraph.
☞ Index.
⁂, *or* ⁂ Asterism.

☞ For an explanation of the various purposes for which these marks or points are used, see their names in the *Vocab.* The note of interrogation is said by Bilderdijk to

have been formed from the first and last letters of the Latin word *Quæstio*, question, placed one over the other; thus, $\frac{Q}{?}$. According to the same authority, the note of exclamation was formed from the Latin word *Io*, joy, written vertically; thus, $\frac{I}{!}$. The circumflex accent (ˆ, ⌢, *or* ~) is formed by joining the grave and the acute. The cedilla (¸) was originally the same as the letter *z*, and was written, in Spanish and French, between the letter *c* and a following *a*, *o*, or *u*, to preserve the *c* in its soft sound. Afterward it was placed under the *c*, and acquired the character of a mere diacritical point. The section mark (§) is said by some to have been formed from the initial letters (*ſſ*) of the Latin words *signum sectionis*, meaning *sign of the section;* but others assert that it is a corruption of a Greek π, the first letter of the word παράγραφος, which means *a marginal line* or *stroke*. The character ¶ is a modification of a capital P (the initial of *paragraph*); the letter being reversed, and the black part being made white, and the white part black, for the sake of distinctiveness. The other characters are all purely arbitrary.

2. PROOF READERS' MARKS.

δ, *or* ℑ (*L. dele.*) Dele, *or* Delete; take out, or expunge.
ϙ *or* ϙ Turn a reversed letter.
A space, or more space, as between words, letters, or lines.
⁀ *or* ⁀ Less space, or no space, between words or letters.
⌊ *or* ⌋ Carry a word farther to the left or to the right.
□ Em quad space; also, indent.
⊓ Elevate a letter, word, or character that is sunk below the proper level.
⊔ Sink or depress a letter, word, or character that is raised above the proper level.
| Shows that a portion of a paragraph projects laterally beyond the rest.
⊥ Directs attention to a quadrat or space which improperly appears.
×, *or* + Directs attention to a broken or imperfect type.
[Bring a word or words to the beginning of a line; also, make a new paragraph.
〓 *or* /// *or* ⟍⟍⟍ Straighten (a crooked line or lines).
⁀ Print as a diphthong, ligature, or single character; thus, æ, fl (*i. e.*, print æ, fl).
¶ Make a new paragraph.
— Put in Italic; also, change according to the mark in the margin, as from Italic to Roman, or from Roman to Italic.
〓 Put in small capitals.
〓 Put in capitals.
...,Restore or retain words which have been crossed out; *stet* being usually written in the margin.

☞ The other marks are self-explanatory; but the following *abbreviations*, used in correcting proof sheets, require explanation:—

wf Wrong font; — used when a character is of a wrong size or style.
tr. Transpose.
l. c. Lower case; that is, put in small, or common, letters a word or letter that has been printed in capitals or small capitals.
s. caps., or *sm. c.* Put in small capitals.
Qu., *Qy.*, or ? Query; Is this right?
out, s. o. Words are omitted, or are wanting, see copy.

SPECIMEN OF A CORRECTED PROOF-SHEET.

THE CROWNING OF PETRARCH.

Nothing can be conceived more affecting or noble than that ceremony. The superb palaces and ~~and~~ porticos by which had rolled the ivory chariots of Marius and Caesar had long mouldered into dust. The laureled fasces, the golden eagles, the shouting Legions, the captives, and the [pictured cities were indeed wanting to his victorious procession. The sceptre had passed away from Rome. But she still retained the influence mightier of an intellectual empire, and was now to confer the ~~proudes~~ reward of an intellectual triumph. To the man who had extended the dominion of her ancient language — who had erected the trophies of philosophy and ____ imagination in the haunts of ignorance and ferocity, whose captives were the hearts of admiring nations enchained by the influence of his song — whose spoils were the *treasures* of ancient genius — the Eternal City offered the glorious and just tribute of her gratitude.

Amid the ruined monuments of ancient, and the infant erections of modern art, he who had restored the broken link between the two ages of human civilization was crowned with the wreath which he had deserved from the moderns who owed to him their refinement, — from the ancients who owed to him their fame.

Never was a coronation so august witnessed by westminster or Rheims.

MACAULAY.

PUBLISHED BY G. & C. MERRIAM COMPANY

PREFACE.

THE Reference History of the World was the work of distinguished scholars. John Clark Ridpath and Horace Elisha Scudder, both widely known and eminent as historians and men of letters, were editors in chief. Dr. Ridpath treated the history of the world in general. The section on Ancient History was the joint work of Professors Thomas D. Seymour, Edward P. Morris, Edward L. Curtis, and Frederick Wells Williams; the introductions to India, China, and Japan were also by Professor Williams, and parts of the introductions to the German Empire and Spanish America were by Professor Edward G. Bourne, — all of Yale University. Dr. Scudder wrote the matter relating to the United States. The panoramic view, which they presented of the march of mankind for almost eight thousand years, was clear, unique, and remarkably comprehensive.

But even the short space of time which has elapsed since the work first appeared renders thorough revision imperative if the presentation of the growing wealth of historical information is to be kept abreast of the other departments of the Dictionary. Bringing to date the chronological narration of events is not enough. In many nations internal political and social conditions have been almost transformed. In all nations minor changes have occurred, of varying consequence to the world at large, but of moment to the peoples involved. New nations have arisen. Colonial dependencies have been transferred. Immemorial national landmarks have disappeared. The international outlook has become larger and embraces more. All over the world colonial and provincial interests and problems have taken the center of the stage. Every war during the last decade has had as its cause some matter concerned with a colony, a province, or a protectorate.

The chronicles in ancient and medieval history, most of the chronicles in modern history, and some of the biographies in "The Presidents of the United States" and of descriptions in "States of the Union" have been left almost untouched. Practically all the rest of the work has been rewritten. Also much new matter has been introduced. All existing nations and their several colonies or possessions have been treated in detail, especially the United States and the British Empire. To make the history more easy of consultation, the arrangement of the section of Modern History has been changed so that the leading countries of the world are now given in alphabetic order. Colonies, protectorates, and other dependencies follow the country with which they are connected. Thus after Great Britain come British Possessions in Europe, then in Asia, Africa, etc. The independent states of Central America have been treated together under the heading Central America. Maps showing the political divisions of the world at various significant periods have been inserted. These will be found helpful in making clear the history of these times and in picturing the changes that have taken place in the partition of the world among the nations. A very full Index renders all this varied information easily accessible.

A CHRONOLOGICAL HISTORY

FROM 6000 B. C. TO THE PRESENT TIME

AND

A HISTORICAL GAZETTEER

OF ALL EXISTING NATIONS AND THEIR DEPENDENCIES

BY

JOHN CLARK RIDPATH AND HORACE E. SCUDDER

THOROUGHLY RËEDITED AND GREATLY ENLARGED BY

EDWIN A. GROSVENOR, LL. D.

PART I. — ANCIENT HISTORY.

FROM 6000 B. C. TO 476 A. D.

THE rudimentary forms of human society appeared on the earth about the time when the great diluvial rivers of the northern hemisphere subsided into their present channels. The date of this subsidence, according to the best calculations deduced from geology, archæology, anthropology, and tradition, can hardly be less than twenty-five thousand years ago; it is probably much more than twenty-five thousand years.

The subsidence of the diluvial streams within the banks which they now occupy left exposed a situation along the rivers, and in particular on the low-lying plains about the estuaries of the great streams where their waters spread out to the sea, especially favorable for the foundation of the first orderly and successful communities of men.

In accordance with these suggestions of nature, we find the earliest civilizing races and peoples in the situations here described. Traces of such peoples may be discovered at a time much more remote than any of the authentic, or approximately authentic, dates of ancient history. It is not to be doubted that in the valleys of the Nile, the Euphrates, the Indus, the Ganges, and the Hoang-ho, the oldest progressive human settlements on the earth were planted.

The **first races of men** — the first peoples becoming national — with whom we have any acquaintance were accordingly the Egyptians, the Assyrians, the Later Babylonians, the old Hindus, the Chinese, and a few other races in like situations to those described.

A little later we find the first upland peoples passing into a civilized state. These peoples were the Medes, the Persians; then the Greeks, the Macedonians, and the great Roman race.

These primitive nations developed, sometimes contemporaneously, sometimes successively, into the great powers called the Ancient Monarchies. It is with these and the course of events in them that we have to deal in the formation of a chronological history of the nations of antiquity.

Each of these nations pursued a long course of development, extending over centuries of time, before it became, or could become, a historic nation. Each had a long prehistoric period of existence of which we know nothing except from vague tradition and a few uncertain monumental records.

To give an exact chronology of ancient history from the earliest times is quite impossible. The reason for this is obvious. Such a chronology requires not only contemporaneous and continuous historical records, or writings embodying them, which are frequently wanting, but also a fixed method of reckoning years: an era or some other similar device must have been adopted. The need, however, of this is felt only after a long period of civilization. The Egyptians, with all their care to preserve records of events, had no historical era. If they dated at all, with very few exceptions they dated only by the years of their sovereigns. From this fact, with the fragmentary character of their monuments and literature, and with the possible synchronism of dynasties, arises the great difficulty of determining the Egyptian chronology. The Assyrians during the latter part of their history had an exact method of reckoning years. They named each year after an officer, usually called an **eponym.** Lists of these eponyms have been discovered within the past forty years in several copies, all of which closely agree, covering the period from about 950 to 650 B. C. From the record of a total eclipse, 763 B. C., is determined the dates of all these years. This **Assyrian canon,** from the mention of Ahab, Jehu, Uzziah, and a few other kings of Israel and Judah in the Assyrian annals, has fixed the periods of these monarchs and compelled a modification of the previous understanding of Old Testament chronology. The Hebrews seem to have preserved but few records of their early history, and the lapses of time given in the Old Testament from the period of creation down to the fall of Jerusalem are in a large degree conjectural. In addition to the Assyrian canon for determining dates of partially the same period, there is the **canon of Ptolemy,** a chronological compilation, with astronomical notes of Babylonian, Persian, Greek, and Roman kings, commencing 747 B. C., and extending to 137 A. D. This so far as tested has proved an accurate and reliable document, and has been of the greatest service in determining ancient chronology. For the periods of Assyrian and Babylonian history earlier than these canons there are lists of monarchs with the length of their reigns going back to 2400 B. C. These lists have not been preserved or discovered entirely without breaks. The period of Sargon I., 3800 B. C., is determined by an inscription of Nabonidus, king of Babylon (556–539 B. C.) stating that a temple which he had restored had been founded by Naram-Sin, a son of Sargon, 3200 years before. (Additional records of even an earlier period have recently been found which probably carry Babylonian civilization back to 6000–8000 B. C.)

The Chinese appear to have had a better sense of true chronology than other Asiatics, though, as is the case with all primitive peoples, their earliest dates are only approximate. There is an entire lack of monumental data or remains in Eastern Asia, from which, as in Babylonia and ancient Egypt, the dynastic lists can be verified by contemporary inscriptions, nor is there any attention paid to dates in the classical literature of the Far East. On the other hand, the methodical and orderly temperament of Chinese writers of all periods disposes the critic to accept those statements upon which a majority of the native historians agree, — a confidence which some recent investigations have shown not to be misplaced. The "Cycle of Cathay" (of sixty years) was not adopted until the first century B. C., though its application is extended by annalists back to the 27th century. Professor Legge of Oxford, the foremost European student of Chinese history, considers the year 775 B. C. "**the earliest date** which can be said to be determined with certainty;" while Sze-ma Tsien, the first of Chinese historians (90 B. C.), called 841 B. C. the earliest reliable date. A strong proof of the approximate correctness of the native chronology which places Yao the Great in the 24th century B. C. has been found in the mathematical calculation which shows certain constellations to have been visible in Eastern Asia at that time about the hour and season at which he locates them. There is much less confusion and uncertainty respecting the whole list of 239 acknowledged sovereigns of China, beginning with its first dynasty, than is the case with any other really ancient nation. This degree of exactitude cannot be assumed for the Japanese annals, which are first recorded in the **Kojiki,** or "Records," and the **Nihongi,** or "Chronicles," at the very recent period of the eighth century after Christ. Here every date which precedes the end of the fourth century A. D., when writing was introduced from China, may be considered as dubious.

In respect to India the materials for constructing a reliable chronology are perhaps still harder to find, for the Hindus, though always a literary people, have never interested themselves in compiling historical or biographical records. Buddhism is the only creed native to that land associated with exact dates, and this cult was extirpated in India a thousand years ago. The absence of data in Hindustan is the more remarkable as both Tibet and Ceylon, countries greatly dependent upon India for their culture, have histories of considerable merit going back two millenniums.

Lists of magistrates or priests preserved in temples or in archives of state were the basis of the ordinary Greek chronology. Thucydides designates the year of the outbreak of the Peloponnesian war as the forty-eighth year of the

priestess Chrysis at Argos, when Ænesias was ephor at Sparta, and Pythodorus was archon at Athens. This method of reckoning by local magistrates or priests was never wholly abandoned, but in later times Greek historians reckoned chiefly from the **Olympic games,** which were held in 776 B. C., and once in four years thereafter for more than a millennium. Thus the invasion of Greece by Xerxes fell in the first year of the seventy-fifth Olympiad, or 480 B. C. The **era of the Seleucids** in Syria, beginning in 312 B. C., attained considerable importance in Asia Minor.

The Romans dated an event by giving the name of the two men in whose consulship the event occurred, or occasionally and less formally by giving the name of one consul. Formal lists of the consuls were kept as a part of the public record. Some copies of these lists, in Latin and in Greek, have been preserved and may be found in the "Corpus Inscriptionum Latinarum," Vol. I.; they form the basis of Roman chronology. But it is probable that the public records were destroyed when Rome was captured by the Gauls, B. C. 390, and that the lists for the years 509–390 were made up from priestly records or from tradition. For the earlier years, before the expulsion of the kings, the dates rest upon tradition or legend, and have little value. The date of the founding of the city, 753 B. C., however, was universally accepted by the Romans and was occasionally used as a date to reckon from, especially when the period of time that had elapsed was regarded as significant. The system of reckoning **ab urbe condita** is modern and conventional.

In this chronological history the dates of the early Egyptian dynasties I.–XVIII. are from the Chronology of W. M. Flinders Petrie; in connection with these are given also the approximate or minimum dates of Eduard Meyer, which are always the latest which can be given for Egyptian eras. These two systems illustrate the uncertainty which still prevails in respect to early Egyptian chronology. Many writers refuse to give a chronology for these periods.

The following dates must also be received as only approximate: Assyrian and Babylonian dates before the ninth century B. C., Biblical dates before the middle of the seventh century B. C., Greek dates before the middle of the sixth century B. C., Roman dates before the beginning of the sixth century B. C., Chinese dates before the eighth century B. C., Indian dates before the sixth or fifth centuries B. C., Japanese dates before the third century of our era.

Many dates subsequent to these periods cannot be exactly fixed, and hence they are given differently by historical authorities. Sometimes differences arise from different modes of reckoning. Some writers, for example, count the first year of a ruler from the year of his accession, others from the first calendar year of his reign.

6000 B. C. Cities are already founded and the industries of civilized life carried on in **Babylonia.**

4777–4514. First (Thinite) Egyptian dynasty, beginning with **Menes** the reputed founder of **Memphis.** (Minimum date for Menes, 3200.)

4514–4212. Second (Thinite) Egyptian dynasty.

4500–4000. Erech, Lagash, Eridu, Isin, Larsa, and Nippur are important cities in Babylonia; the last is a religious center. Lugal-Zaggisi, king of Erech, reigns over a great empire. Lugal-kigub-nidudu also reigns.

4212–3998. Third (Memphite) Egyptian dynasty.

4000. Semitic settlements already in Assyria. Era of independent states or cities in Babylonia, continuing about 1800 years.

4000–1500. Assyria subject to Babylonian dynasties.

3998–3721. Fourth (Memphite) Egyptian dynasty. Era of **Sneferu,** with whom monumental history in Egypt begins, and who worked mines in the Sinaitic peninsula. Era also of Khufu (Cheops), the builder of the **great pyramid of Gizeh,** and of Khafra, the builder of the second pyramid. (Minimum dates, 2830–2700.)

3800. Sargon I., "king of Akkad" (Agade), reigns in Babylonia over a wide territory; a patron of learning; the "Charlemagne of early Babylonia."

3750. Naram-Sin, "king of Akkad," builder of the temple of the sun in Sippar, reigns in Babylonia.

3721–3503. Fifth (Elephantine) Egyptian dynasty. Copper and malachite mines are worked in the Sinaitic peninsula; the proverbs of Ptah-hetep are composed [*Petrie*]. (Minimum dates, 2700–2560.)

3503–3322. Sixth (Memphite) Egyptian dynasty. Era of **Pepi I.,** the most active and vigorous of all the early monarchs, who has left many monuments. Era of Queen **Nitocris.** (Minimum dates, 2560–2400.) (Dynasties I.–VI. are called the Old Empire.)

3322. Accession of **Fu-hi,** reputed **inventor of writing and founder of Chinese polity,** with whom begins their period of "highest antiquity."

3322–2778. Seventh and eighth (Memphite), ninth and tenth (Heracleopite), eleventh (Theban) Egyptian dynasties. The first four dynasties are an obscure period of civil wars and foreign invasion; of these there are also few remains. The Theban dynasty of the Antef kings is an era of restored prosperity. (Minimum dates, 2400–2130.)

3227. Shin-nung, second legendary monarch of China, called the **father of agriculture.**

3102. Hindu era called **Kali Yug,** supposed first arrival of **Aryans** in the **Indus valley.** (Purely traditional and untrustworthy.)

3100. Sumerian dynasty of Lagash (Telloh) in S. Babylonia. Era of **Urbau** and **Gudea;** a highly advanced civilization of which there are many remains; commerce extends into Syria and Arabia.

3000. Nineveh, a trading city and site of a temple of Nina.

2900. First dynasty of Ur. Urbau consolidates city kingdoms of Babylonia.

2778–2565. Twelfth (Diospolite) Egyptian dynasty. An era of great prosperity under Amenemhat I.–III. Usertesen I.–III. Ethiopia is conquered. Trade is extended through Syria and Arabia. The reservoir lake Moeris is excavated and **great monuments at Karnak,** Beni Hassan, and elsewhere are erected. (Minimum dates, 2130–1930.)

2700. The dynasty of Isin and the second dynasty of Ur in S. Babylonia.

2697. Hwang-ti, the "Yellow Emperor" of China, begins his century reign.

2637. Beginning of the Chinese sexagenary cycle.

2565–1587. Thirteenth (Theban), fourteenth (Xoite), fifteenth and sixteenth (Hyksos), seventeenth (Theban) Egyptian dynasties; a period of decline and the domination of the foreign Hyksos or **shepherd kings** (probably **Asiatic** Bedouins). (Minimum dates, 1780–1530.)

2400–2300. The dynasty of Larsa in N. Babylon.

2400–2100. The **first (Hammurabi) Babylonian dynasty.**

2357. Accession of **Yao the Great** of China, who died 2258 B. C.

2280. The Elamites under Ku-dur-Mabuk conquer Lower Babylonia.

2278. Deluge of Yao (inundation of Yellow river) controlled by Yu.

2255. Reign of Shun, last of the "Five Rulers" of ancient China.

30 (or 31). **He is crucified** by order of the Roman procurator.
35. Conversion of **Saul of Tarsus.**
37. Caius Cæsar (*Caligula*) succeeds Tiberius.
Josephus is born.
40. **Kanishka,** Scythian king of N. W. India, convenes fourth Buddhist council; **origin of Northern Buddhism.**
41. Claudius is made emperor by the Prætorian Guard.
41–44. **Herod Agrippa** king of Judea.
43. Aulus Plautius occupies parts of Britain.
44–66. Judea under Roman procurators.
47. The **Romans subdue South Britain.**
48. Claudius orders the taking of a census.
49. He banishes the Jews from Rome; he constructs a camp on the site of London.
50. Ostorius overcomes Caractacus, king of the Britons.
51. Caractacus, king of Britain, is carried in chains to Rome.
54–68. **Nero** emperor.
61. **Boadicea,** queen of the Iceni, defeats the Romans, but is finally herself defeated.
St. Paul is brought a prisoner to Rome.
64. **Rome is burned,** as alleged, by the secret orders of Nero.
Nero begins a persecution of the Christians.
65. **Buddhism introduced** into **China** from **India.**
Seneca, the philosopher, and Lucan, the poet, are put to death.
66. Nero in Greece; the Jews in Palestine rebel against the **Romans.**
67. **St. Paul** perishes by **martyrdom.**
68. Galba, Otho, and Vitellius become emperors in succession.
69. Vespasian is proclaimed emperor by the legions in Syria.
70. **Titus** captures and **partially destroys Jerusalem.**
75. Vespasian begins the building of the Coliseum.
78. Shaka, or Shalivahana, **Scythian era** of Southern India.
79. Titus succeeds Vespasian.
Destruction of Herculaneum and Pompeii by an eruption of Vesuvius.
Agricola defeats the Caledonians under Galgacus and completes the conquest of Britain for the Romans.
Death of the elder Pliny.
81. Domitian becomes emperor, succeeding his elder brother Titus.
93. Domitian persecutes the Jews, Christians, and philosophers.
96. Domitian is assassinated, and is succeeded by **Nerva,** the **first** of the **"five good emperors."**
100. Sah dynasty of Guzerat.
103. Pliny the younger is proconsul in Bithynia.
105. **Paper** is **invented** by Tsai Lun in **China.**
106. Trajan persecutes the Christians; he creates the province of Dacia.
110. Martyrdom at Rome of Ignatius, bishop of Antioch.
113. Trajan's column is reared in Rome.
115. Trajan annexes Parthia; the **Roman Empire** reaches its **greatest extent;** the **Silver Age** of **Roman literature** (Tacitus, Pliny, Quintilian, Juvenal) falls chiefly within Trajan's reign.
117–138. Hadrian emperor in Rome.
121. Hadrian builds the wall from the Solway to the Tyne.

THE MATTHEWS-NORTHRUP WORKS, BUFFALO, N. Y.

122. Hadrian visits Egypt and Greece.
132. Bar-cocheba captures Jerusalem.
135. The **Romans subdue a revolt** in **Judea; half a million Jews perish.**
138–161. Antoninus Pius emperor in Rome.
139. Wall built by the Romans between the Forth and the Clyde.
156. Martyrdom of Polycarp, a pupil of the apostle John.
161–180. Marcus Aurelius emperor in Rome.
162. The Parthians invade Syria.
166. Persecution of the Christians throughout the Roman Empire.
A patriarch or high priest of the Taoist sect in China is appointed with the title of Heaven's Teacher. The office is still in existence.
193. Julian buys the empire from the Prætorian Guard.
196. Byzantium is taken by the emperor **Severus;** he protects the Jews.
197. He defeats Albinus, governor of Britain, in a great battle at Lyons.
200. Japanese conquest of Korea by the empress Jingo (legendary).
204. South Britain is divided into two Roman provinces.
208. Severus establishes his court at Eboracum (York), and dies there in 211.
215. The emperor Caracalla causes massacres in Alexandria.
221–264. Epoch of the Three Kingdoms (Shuh, Wei, and Wu) in China.
226. Ardshir (Artaxerxes), having come to the Persian throne in 211 or 212, overthrows the Parthian empire and founds the Persian monarchy of the **Sassanidæ** (Sassanian Empire).
248. Celebration of the secular games; **one thousandth anniversary of the founding of Rome.**
250. The **Goths invade** the **Roman Empire.**
A persecution of the Christians is begun by Decius.
252. The Roman Empire is stricken with a pestilence.
252–260. Sapor I. wages war against the Romans; he occupies **Armenia,** invades Syria, and captures the emperor Valerian.
253. The **Franks invade Gaul, Spain,** and **Africa.**
255. The Goths overrun Thrace.
267. Athens is taken by the **Goths.**
265–317. The Western Tsin dynasty in China.
269. Claudius II. (Gothicus) is triumphant over the **Goths.**
270. Aurelian abandons Dacia to the Goths.
272. Zenobia, queen of Palmyra, **conquers Egypt.**
The emperor Aurelian reëstablishes the Roman sway in Egypt.
273. Hormizd (Hormisdas) I. reigns one year in Persia.
Zenobia is brought as prisoner to Rome after the capture of Palmyra by Aurelian.
Longinus is put to death.
274–276. Bahram (Varanes) I., king of Persia, persecutes the Manichees and the Christians.
276–293. Bahram (Varanes) II. reigns in Persia; is defeated (276–282) by the emperor Probus; he consents to peace.
277. The emperor Probus drives the Germans out of Gaul.
283. Carus invades Persia and conquers Seleucia and Ctesiphon.
284–305. Diocletian emperor in Rome.
286. Carausius destroys the Roman supremacy in Britain.
Tiridates II. ascends the Armenian throne.
293. Bahram (Varanes) III. holds the throne of Persia about a year.
294. Allectus slays Carausius and seizes the British dominion.
294–303. Narseh, gaining the mastery over Bahram, reigns.
296. Constantius recovers Britain.
297. Narseh occupies Armenia and defeats Galerius.
298. Galerius defeats Narseh and restores Tiridates to the Armenian throne. Persia makes peace with Diocletian.
303–310. Hormizd (Hormisdas) II. reigns in Persia.
303. The emperor Diocletian begins the so-called "tenth" persecution by an edict against the Christians.
306. Constantius dies at York, July 25.
308. Six emperors, three Augusti and three Cæsars, **divide** the dominion of the **Roman Empire.**
310. Sapor (Shapur) II., a babe, receives the Persian crown.
311. Galerius, in the name of Constantine, issues an edict of toleration of the Christians.
312. Constantine is converted to **Christianity.**
314. Bishops of the British church are present at the council at Arles.
317–419. The Eastern Tsin dynasty in China.
321(?). The **principal seat** of the **Roman Empire** is transferred to **Byzantium (Constantinople).**
323. Constantine defeats Licinius at Chrysopolis and rules alone.
324. Constantine issues a general edict of **toleration and commendation** of **Christianity.**
325. Constantine convokes the **first general council** of the Christian church at Nicæa; it formulates the **Nicene Creed;** Arian controversy.
330. Constantine dedicates the new capital of Constantinople (Byzantium), giving it his name; he commands the heathen temples to be destroyed.
334. The Sarmatians are allowed to settle in Thrace.
337. Constantine dies, May 22.
Sapor wages war for some twenty-five years against the **Romans.**
339. Terrible **persecution of Christians in Persia.**
348. Ulfilas bishop to the Goths.
360. Britain is invaded by the **Scots** and the **Picts.**
Julian is proclaimed emperor of the West by the Roman army in **Gaul.**
361. He **abjures Christianity** and reopens the pagan temples.
363. He is slain in battle in Persia, near the Tigris, June 26.
Jovian, making peace with Sapor, yields up the Persian provinces; he restores Christianity.
364. First division of the empire; Valentinian takes the western division, Valens the eastern.
365. Sapor annexes Armenia to Persia; is soon again at war with the Romans.
368. Theodosius repels the Scots and the Picts.
371. Cessation of war between Persians and Romans.
374. St. Ambrose elected Bishop of Milan; he champions the cause of the Catholics against the Arians and Pagans: he excommunicates the emperor Theodosius for his cruelty in the massacre of Thessalonica (390).
379–384. Ardshir (Artaxerxes) II. reigns in Persia.
381. Second ecumenical council, at Constantinople; the Apollinarian controversy.
382. Hieronymus, known as **St. Jerome,** one of the Fathers of the Latin church, removes from Antioch to Rome: here he begins and completes the Latin version of the Bible known as the **Vulgate.**
384–389. Sapor (Shapur) III. reigns in Persia.
387. St. Augustine of Hippo is baptized by **St. Ambrose.**
389. The worship of Serapis in Egypt is abolished and his temple destroyed.
389–399. Varanes IV. is king of Persia.
390. Armenia is divided by treaty between Persia and Rome.
394. Olympian games abolished.
395. The **Roman Empire** is finally divided into **Eastern** and **Western.**
St. Augustine is made Bishop of Hippo. He becomes the champion of the Orthodox faith against the Donatists and the Pelagians.
396. Alaric invades **Greece.**
399–420. Yezdegerd I. reigns in Persia; he is tolerant towards the Christians.
400. Visit of the Chinese Buddhist pilgrim, Fa Hian, to India.
400–800. Puranic epoch in India; ascendency of Kanauj and Ujain.
402. Honorius, the Western emperor, fixes his residence at Ravenna.
404. St. Chrysostom of Antioch is exiled to Cappadocia, where he composes his principal works.
405. The art of writing is introduced into Japan from China, and taught at court by a Korean named Wangin.
409. The **Vandals** invade **Spain.**
410. Honorius renounces the sovereignty of Britain.
Alaric and the **Goths** capture and **sack Rome,** August 24.
420–479. The Sung dynasty in China; epoch of division bet. North and South.
420. Bahram (Varanes) V., a favorite hero of Persian tradition, becomes king of Persia.
422. Romans (Eastern Empire) and Persians make peace; **religious freedom** granted the **Christians in Persia** and **Zoroastrians in the Roman Empire.**
424–454. Reign of Wên Ti, emperor of China, under whom Confucian literature was cultivated, Buddhism persecuted, Cochin China conquered, and the empire invaded and overrun by the Wei from the north.
425. University of Constantinople organized.
Vortigern reigns in Britain.
426. St. Augustine of Hippo publishes the De Civitate Dei, **"The City of God."**
429. Armenia is united to Persia.
The Vandals under Genseric invade **Africa.**
430. The Persian wars with the Tatars and Huns begin.
431. Third ecumenical council, at Ephesus; Nestorian controversy.
439–457. Yezdegerd II. reigns in Persia.
440–461. Leo I., surnamed the **Great,** is pope.
442. Attila invades Thrace.
449. Hengist and Horsa, Saxon invaders, land in England.
450–500. Saxons and Jutes make conquests and settlements in **England;** era of the legendary **heptarchy.**
450. Buddhism established in Burma.
451. Attila invades Gaul and besieges Orleans; battle of Chalons.
Fourth ecumenical council, at Chalcedon; the **Eutychian controversy.**
455. Genseric and the Vandals capture Rome, July 15.
459–489. Peroz, after a few years' contest with his brother, reigns in Persia.
473. The Japanese Ki no Tsuno no Sukune writes a description of Korea; probably the first book of its kind produced in Japan.
476. Barbarian mercenaries demand a third of the land of Italy, and on refusal revolt, **overthrow the remnant of Roman imperial power,** dethroning Romulus Augustulus and proclaiming the Herulian **Odoacer,** their leader, king. This ends the western Roman Empire and **closes** what **is** conventionally called (in Europe) **Ancient History.**

PART II.—MEDIEVAL HISTORY

FROM 476 A. D. TO 1648.

THE overthrow of the Roman Empire of the West by the Teutonic invaders, at the beginning of the last quarter of the fifth century of our era, is the event which by the consensus of historians should be taken as the crisis by which Ancient History is separated in time from the History of the Dark Ages.

The expression "Dark Ages" is somewhat indeterminate, but may be accepted in general as definitive of that period in European annals extending from the fifth to the tenth century. The term "Middle Ages" is of wider extent, and is still less clearly defined.

The word "medieval" is sometimes used of the whole period reaching from the extinction of the Roman Empire in Western Europe to the close of the wars of the Reformation. By some writers the Middle Ages are more narrowly defined as extending from the tenth to the middle of the fifteenth century, or, more definitely, to the discovery of the New World. We may perhaps with propriety apply the expression "MEDIEVAL HISTORY" to all the series of European events and transformations which occurred between the establishment of the first barbarian kingdom in Italy and the general pacification of Europe at the close of the Thirty Years' War.

Whatever may be the historical phraseology, the old forces of civilization in Europe seemed to decline and expire coincidently with the decadence and extinction of the western division of the Roman Empire. The Eastern Empire maintained a precarious existence for nine hundred and seventy-seven years after the final overthrow of the Cæsarean dominion in the West. But meanwhile, all Western Europe was transformed into a condition so dissimilar to that which had existed during the long Roman ascendency as to mark a new era in human history. It was a chaotic era in which civil society was broken up and new races and new institutions were forcibly superimposed on the ruins of ancient civilization. Only in the towns and cities of the south of Europe, and in certain other favored localities, sheltered by nature from the oncoming barbarism, were the remains of the old urban activities of the Romans any longer discoverable.

The causes of this great crisis and transmutation of Europe are to be found in two general classes of facts. The first class relates to the internal decay of the Roman race and of the institutions which it had created. The second class relates to the upheaval and progressive westward movement of the barbarian nations from the northeast of Europe across the line of the Danube and the Rhine.

The causes of this movement of the Teutonic nations are occult and most difficult to define. The *fact* of the barbarian invasions was sufficiently tangible, but not the causes of the fact. The German nations, after having been held at bay for several centuries, at last broke over the borders which Rome had set as the demarcation of her power, and pouring through the passes of the Alps, defeated the armies of the degenerate Cæsar, took the capital, obliterated the unreal government of Romulus Augustulus, and instituted a barbarian kingdom in its stead.

This was the kingdom of the **Herulians;** and with this event the chronological outline of **Medieval History may properly begin.** This history will include the progress of events during the epoch in which the several barbarian kingdoms were established in different parts of Western Europe. It will include also the half-settled state of society which ensued. It will include the origin and development of feudalism which became the prevailing order throughout a large part of what had been the Roman Empire. It will include the rise of a new Semitic religion in the East, originating in the enthusiasm of Mohammed the Prophet and propagated by the warlike zeal of his followers. It will include the long struggle of the Christian Church to maintain itself in a contest, first with the new barbarian conditions, then with the aggressive policy and fierce assaults of Islam, and finally to readjust itself to the roused-up intellect and conscience of its own adherents. It will include the story of the Crusades and of the institutions of chivalry which came afterwards. It will include the revelation of a new world hitherto unknown except vaguely in the story of Atlantis, the sagas of Icelandic bards, and the tradition repeated by Mandeville. It will include the revival of art and learning, the reformation of religion, the division of Europe into powers Catholic and powers Protestant, the contest of these through a hundred and twenty-five years of hostility and battle, and the final adjustment of this conflict and the establishment of peace on a basis from which have sprung most of the existing governments of modern times. Such an outline of human history, covering a period of eleven hundred and seventy-two years, here follows, beginning with the crisis which separates the Europe of old Rome from the Europe of Barbarism.

---

1. THE BARBARIAN ASCENDENCY IN EUROPE.

477 A. D. Odoacer, the Herulian king, confirms his authority in Italy and institutes the **kingdom of the Heruli.** From his capital of Ravenna he maintains his authority in Italy for fourteen years.

486. Clovis, or Khlodvig, king of the Franks, invades Gaul, defeats the Roman Governor Syagrius in a decisive battle at Soissons; by this victory he destroys the Roman ascendency north of the Alps.

493. Theodoric the Great, king of the East Goths, lays siege to Ravenna and compels Odoacer to surrender the city. Theodoric establishes the **Ostrogothic kingdom** in Italy, and Odoacer is put to death.

496. Clovis is converted to Christianity and is baptized.

507. He engages in a war with the Visigoths, whom he signally defeats in a battle at **Poitiers,** and obtains the mastery of Aquitania.

511. He dies and his territory is divided among his four sons, Theodoric, Childebert, Clodomir, and Clotaire.

525. Boëthius, the philosopher, author of the "Consolation of Philosophy," after filling the highest offices under Theodoric the Great, is falsely accused of treason by his enemies; he is imprisoned and executed by the order of Theodoric, who dies in the following year.

527–565. Justinian reigns over the Eastern Roman or Byzantine Empire.

529. Justinian publishes his **Code and Pandects** of the Roman law, which becomes the **basis of the civil law** in nearly all the civilized nations.

531. Chosroës I., greatest of the Sassanid dynasty, ascends the **Persian throne;** he divides the empire into four districts, encourages learning, and introduces many reforms.

534–5. Justinian's general, **Belisarius,** leads an army against the Ostrogoths, and **regains Sicily.**

536. Belisarius continues a successful warfare against the Ostrogoths and enters Rome in triumph.

537. Justinian consecrates the cathedral of Aghia Sophia.

538. Vitiges, king of the Ostrogoths, besieges Belisarius in Rome, but is repulsed.

539. Belisarius attacks Vitiges in Ravenna and takes the city.

541. He is recalled from Italy and carries on a war in Syria against the Persian invasion of Chosroës I., whom he successfully withstands.

552. Narses, who succeeds Belisarius in the command of the Italian army, vanquishes and slays Totila (*Baduila*), king of the Ostrogoths. In the following year the **Ostrogothic kingdom** is **finally destroyed** by Narses, and Italy is restored to the dominion of the Emperor; Narses is appointed the first *exarch* (governor), with Ravenna as his capital.

554. The Alemanni and Franks invade Italy; they are routed by Narses.

558. Clotaire I. succeeds in **uniting the Franks** into a kingdom.

561. On his death the nation is again divided into petty states.

566. The kingdom of the Gepidæ in Pannonia is destroyed by the Lombards and Avars under Alboin, who marries Rosamunda, daughter of the king of the Gepidæ.

570 or **571. Mohammed** is born.

572. Alboin, after many conflicts, succeeds in forming a **kingdom of the Lombards** in Italy, though it relapses into independent duchies after his death, in 574.

597. St. Augustine, the **Apostle of the English,** begins his missionary works among the Anglo-Saxons under the direction of Pope Gregory the Great, and Kent is converted.

611. Chosroës II. of **Persia** makes **successful wars** against the Byzantine empire, in which he conquers Egypt, Syria, and Asia Minor.

613. The empire of the Franks is united for a short time under the sway of Clotaire II.

622. Heraclius, the Byzantine emperor, begins a victorious campaign against the Persians.

2. THE MOHAMMEDAN ASCENDENCY.

622. Mohammed ibn Abdallah, the Arabian Prophet, flees from Mecca to Medina, this **"Hegira"** marking the **epoch of Mohammedan chronology.**

627. Heraclius wins a decisive victory over Chosroës II. at Nineveh.

629. Mohammed forces Mecca to acknowledge his sway; he makes an **invasion of Palestine.**

632. The Prophet dies and Abubekr, his father-in-law, succeeds to the primacy of Islam as **first of the caliphs;** he undertakes the conquest of Syria.

634. Omar, another father-in-law of Mohammed, becomes caliph on the death of Abubekr.

635. In the battle of Cadesia the army of the **caliph** overwhelmingly **defeats the Persians.**

636. The caliph gains a series of victories ending with the **conquest of Palestine and Syria.**

641. The army of Omar the Great wrests Egypt from the possession of the Byzantine empire.

642. The Saracens under Omar win the battle of Nehavend; the Persian monarchy passes under the sway of Islam.

644. Omar is murdered, and Othman, Mohammed's son-in-law, succeeds to the caliphate.

656. Othman is assassinated, and Ali, another of the sons-in-law of the Prophet, becomes caliph.

661. The dynasty of the **Ommiads** is founded by Moawiyah, a governor of Syria, son of Abu Sofian, who has refused allegiance to Ali; he transfers the capital from Kufa to Damascus, and makes the **succession to the caliphate hereditary.**

668. Yesid, son of the caliph, begins the first siege of Constantinople by the Arabs. It continues for seven years.

711. Tarik, the general of Islam, after the conquest of North Africa, leads the Saracens into Spain, where they vanquish the Visigoths under Roderic at the battle of Jerez de la Frontera; after three years **all Spain,** except Asturias, is **dominated by the invaders.**

717. Second unsuccessful siege of Constantinople by the Arabs, lasting thirteen months.

719. The Saracens advance on Narbonne and capture it.

728. Luitprand, king of the Lombards, captures Ravenna.

732. Charles Martel, at the head of the Franks, **overthrows the Saracens** in the great battle of **Poitiers** and drives them back beyond the Pyrenees.

750. The Abbasides, of the line of Abbas, one of Mohammed's uncles, overthrow the Ommiad dynasty.

751. Pepin the Short, son of Charles Martel, dethrones Childeric III. of the Merovingian line (so called from Meroveus, king of the Ripuarian Franks), **establishes a new dynasty** (afterwards known as the **Carlovingian**), and reigns over the Franks.

752. The exarchate of Ravenna is destroyed by the Lombards, under the leadership of Astolphus.

755. Astolphus is conquered by Pepin the Short, who bestows Ravenna, Pentapolis, and other possessions taken from the Lombards upon Pope Stephen II., thus laying the **foundation of the papal states.**

756. Abderrahman, the only Ommiad prince to escape death at the hands of the Abbasides, founds in Spain the Ommiad caliphate of Cordova.

762. The caliph Al-Mansur transfers the capital of the Abbaside caliphate to Bagdad, of which he is the founder.

768. On the death of Pepin his two sons, **Carloman and Charles (Charlemagne),** succeed to the rule of the **Frankish empire.**

3. THE AGE OF CHARLEMAGNE.

771. Karl or Charles (**Charlemagne**), on the death of his brother Carloman, becomes **sole ruler of the Franks.**

772. Desiderius having led the Lombards to seize the pope's patrimony, Charlemagne destroys the kingdom of the Lombards and is crowned **king of the Lombards,** 773.

778. In response to the Arabian governor's request for aid against Abderrahman, Charlemagne makes an invasion of Spain and annexes the country between the Ebro and the Pyrenees under the name of the "Spanish March."

780. The **Empress Irene** seizes the Byzantine scepter in the name of her son, Constantine VI., who is afterward dethroned (797).

786. Harun-al-Rashid (the Just) becomes caliph of the Arabian empire, and introduces an era of remarkable enlightenment and prosperity.

787. The **Northmen** begin their **invasions into England.**

788. Charlemagne makes Bavaria a part of his dominions.

796. Charlemagne, after a campaign of five years, reduces the Avars to subjection and incorporates their territory with the Frankish kingdom under the name of the "Avaric March."

800. Pope Leo III., having obtained the aid of Charlemagne to overcome an insurrection of the Romans, **crowns his benefactor** as successor of the Cæsars, December 25.

804. After a war of thirty-two years' duration **Charlemagne subjugates the Saxons;** they are compelled to embrace Christianity.

814. On the death of Charlemagne, Louis the Debonair succeeds to the throne of the so-called Roman Empire.

827. The states of the **Anglo-Saxon Heptarchy** acknowledge the suzerainty of Egbert, king of Wessex.
Saracens begin a campaign against Byzantines for possession of Sicily.

833. The kingdom of Louis the Debonair is involved in civil strife caused by the treachery of the king's sons.

840. Louis dies, and the three sons, Lothaire, Louis the German, and Charles the Bald, claim the succession; they war for the possession of the kingdom.

841. In a battle of the brothers fought at Fontenailles, Louis and Charles defeat Lothaire.

843. The three rivals make a treaty at Verdun by which the **empire is divided into three parts;** Lothaire receives Italy and the Central Frankish territories; Louis the German accepts Germany, the "Eastern Frankish lands"; and Charles the Bald takes France, or the "Western Frankish lands." The treaty of Verdun marks the **beginning of national history** for the three states, **Italy, Germany, and France.**

845. The Northmen continue to invade France; they plunder Paris.

846. The Saracens make a campaign in Italy and lay siege to Rome.

862. Rurik, chief of the Varangians, establishes his power at Novgorod and thus lays the **foundation of the Russian empire.**

866. Alfonso the Great becomes king of Asturias, the **Christian monarchy in Spain,** afterward called Leon.

867. The contests between the Latin and Greek Christians culminate in the excommunication of the pope by Photius, patriarch of Constantinople, head of the Greek church.
The Macedonian dynasty in Byzantium begins with Basil I.

870. Svatopluk II., a West Slavic chieftain, leads a successful rebellion

against the Emperor of Germany, great-grandson of Charlemagne, called Louis the German; he founds the kingdom of Great Moravia.
871. **Alfred the Great** becomes king of England and begins the development of **law and learning.**
874. Iceland is colonized by the Northmen.
878. Alfred defeats the Danes at Edington and compels Guthrum, the Danish king, to embrace Christianity and to be baptized.
Sicily is subjugated by the Saracens.
887. Charles the Fat, great-grandson of Charlemagne, **reunites the empire of Charlemagne,** with the exception of cisjurane Burgundy, which becomes an independent kingdom under Boso.
Charles the Fat is deposed by the Franks of the East and the West on account of his cowardice in the siege of Paris by the Northmen two years previously.
891. The Northmen are beaten at Louvain by Arnulf, who has been elected king by the East Franks in place of Charles the Fat.
893. The **Magyars** under Prince Arpad cross the Carpathians, defeat the Moravians under Svatopluk, and settle in the valley of the Theiss.
901. Alfred the Great dies, and his son, Edward the Elder, ascends the throne of England.
906. The Magyars make a conquest of the kingdom of Great Moravia, which becomes a part of Bohemia.
911. The **Carlovingian dynasty** in Germany becomes **extinct** with the death of Louis the Child, last heir in right descent from Charlemagne, and Conrad, duke of Franconia, is chosen king.
Rollo, chief of the Northmen, receives from Charles the Simple, king of France, a grant of the province of Neustria, which becomes the duchy of Normandy.
912. Abderrahman III. begins to reign in Cordova, introducing the **golden age of Arabian power in Spain.**
919. On the death of Conrad the Germans elect Henry the Fowler to be king, the first of the Saxon line.
933. Henry the Fowler defeats the Hungarians at Merseburg.
The **kingdom of Arles** is established by the union of the two Burgundies and so continues for a century.
936. Otho the Great reigns over the Germans and Louis d'Outremer over the French.
937. Athelstan, king of England, wins a victory over the Danes and Scots at Brunanburh.
951. Berenger II. of Italy is driven from his throne by Otho of Germany, but is restored in the following year and allowed to reign under Otho's suzerainty.
955. The Hungarians are vanquished by Otho on the Lech.
961. Berenger II. is finally deprived of his crown, and the sovereignty of Italy passes from the line of Charlemagne to Otho.
962. Pope John XII. crowns Otho emperor of the Romans.
963. Nicephorus Phocas accedes to the throne of the Byzantine empire and undertakes successful campaigns against the Asian Saracens.
966. Miecislas, **King of Poland,** becomes a **convert to Christianity.**
969. The **Fatimites,** dynasty of Ali who married Fatima, daughter of the prophet, **subjugate Egypt.**
Nicephorus is assassinated by his general, John Zimisces, who seizes the Byzantine crown.
973. Otho the Great dies, and his son, Otho II., succeeds to the throne of the German empire.
978. Otho II. makes a victorious invasion of France.
982. He is defeated by the Saracens and Greeks in South Italy.
986. The Norseman Herjulfson sights the coast of Labrador.
987. **Hugh Capet** seizes **the sovereignty of France,** and establishes the **Capetian dynasty.**
988. **Vladimir** the Great of **Russia** becomes **a convert to Christianity.**
991. The Danes compel Ethelred II. of England to pay tribute.
997. The doge of Venice is proclaimed duke of Dalmatia; in this era **Venice** becomes the **dominant power** of the **Mediterranean.**
998. Otho III., emperor of Germany, grandson of Otho the Great, conquers and slays Crescentius, who has seized the rule in Rome.
1000. Pope Sylvester II. crowns St. Stephen as king of Hungary.
1001. **Mahmud** of Ghuzni makes an **invasion of India.**
Leif Erickson discovers North America.
1002. The Danes are massacred in England.
1013. The **Danes** under Sweyn **subjugate England.**
1016. Edmund Ironside, son of Ethelred II , and Canute, son of Sweyn, who has succeeded to the rule in Denmark, war for the English throne.
1017. **Canute** is victorious and **assumes the crown.**
1018. Basil II. adds Bulgaria to the Byzantine empire.
1019. Yaroslav gains the throne of Russia.
1024. Conrad II., first of the Franconian dynasty, ascends the German throne.
1027. Conrad yields Schleswig to the Danes.
1028. The Danes under Canute invade Norway.
1031. The Ommiad caliphate of Cordova is extinguished.
1033. Sancho the Great, of Navarre, constitutes Castile a kingdom.
1034. Conrad II. of Germany adds the domain of Arles to his empire.
1035. Canute dies, and his sons, Hardicanute and Harold Harefoot, reign, the one in the South and the other in the North of England.
Aragon, being separated from Navarre, becomes a kingdom.
1037. **Harold** overcomes the representatives of his half brother Hardicanute and **reigns alone in England.**
Togrul Beg establishes the rule of the Seljuks in Persia.
1039. Conrad II. is succeeded by Henry III. in Germany.
Macbeth, thane of Cawdor, after slaying Duncan, becomes **king of the Scots.**
1040. Hardicanute, after the death of Harold, reigns alone as king of England.
1041. The Normans overthrow the Byzantine dominion in Apulia.
1042. Hardicanute dies, and with his death the **Danish ascendency in England ceases;** Edward the Confessor ascends the throne.
1046. Clement II. is decreed pope by Henry III. of Germany in a council held at Sutri to consider the cases of the rival claimants.
1050. The Seljukian Turcomans become masters of Persia.
1054. **Schism** between the **Latin and Greek Catholics** becomes complete.
Russia, on the death of Yaroslav, **is dismembered;** principalities are created out of the imperial dominions.
1055. Togrul Beg establishes the suzerainty of the Seljuks over the caliphate of Bagdad.
1056. **Henry III.** of Germany dies; he is succeeded by **Henry IV.,** with his mother, Queen Agnes, as regent.
1057. The dynasty of the Commeni begins in Byzantium.
1059. The sole right **of the college of cardinals to elect a pope** is proclaimed by Nicholas II.
1061. Robert Guiscard, duke of Apulia and Calabria, leads the Normans against the Saracens in Sicily.
1062. Henry IV. of Germany, while yet a child, is seized by Hanno, archbishop of Cologne, who usurps the imperial functions.
1066. Edward the Confessor is succeeded by Harold II. in England, who repels an invasion from Normandy; thereupon **William, duke of Normandy,** called the Conqueror, leads a second invasion of Britain, in which he **triumphs over Harold** at the battle of Hastings, October 14, and establishes himself as king of England; this is designated as **the Norman Conquest.**
1071. Romanus Diogenes, the Byzantine emperor, is conquered, and made captive by the Seljuks under Alp Arslan.
1072. Palermo is wrested from the Saracens by Roger Guiscard, duke of Apulia and Calabria, who thus secures entire control of Sicily.
1074. **Pope Gregory VII. (Hildebrand)** summons a council in which simony is forbidden and the **celibacy of the clergy is decreed.**
1075. The pope declares against the lay investiture of the clergy and engages in a controversy concerning it with Henry IV. of Germany.
1076. The **pope is deposed** at a council held in Worms by Henry's summons; the **emperor** in turn **is deposed** and excommunicated by the pope, who secures the coöperation of the German princes.
1077. Henry is obliged to visit Rome and to humble himself for three days in the courtyard at **Canossa** before he is admitted to an audience. The pope extends absolution to the penitent emperor; nevertheless a rival emperor, Rudolph of Swabia, is elected to the imperial dignity in Germany.
1080. Pope Gregory is again deposed at a council held by Henry, and Guibert, known as Antipope Clement III., is elected to the pontifical throne; in the same year Rudolph of Swabia dies.
1081. Henry makes an unsuccessful advance on Rome, and Hermann of Luxemburg is elected to succeed Rudolph of Swabia.
Constantinople is captured by Alexis Comnenus, who proclaims himself emperor of the Byzantine dominion.
1084. The Seljuks overrun Syria and Asia Minor.
Gregory VII. (Hildebrand) is besieged in the castle of Sant' Angelo by Henry IV., but is delivered by Robert Guiscard.
1086. William the Conqueror completes the survey of the English realm, the results of which are recorded in **Domesday Book.**
1087. On his death one son, William Rufus, succeeds to the English throne, while the other, Robert, rules in Normandy.
1092. The Seljukian empire is disrupted by the death of Malek Shah.

4. THE CRUSADES AND THE RENAISSANCE.

1095. **Councils** are held at Piacenza and Clermont by Pope Urban II. He proclaims **a crusade** of Christians for the **recovery of the Holy Sepulcher** from the Infidel Turks, who possess Jerusalem and levy a tax on all Christian pilgrims visiting the city.
1096. Vast masses of men, incited by the exhortations of **Peter the Hermit** and **Walter the Penniless,** form an undisciplined army of crusaders and march in four bands through Central Europe, Hungary, and the Danubian countries toward Constantinople; the Hungarians and Bulgarians, angered at the ravages of the crusaders, attack them, and only two of the four divisions reach Turkey, where they are destroyed by the Turks.
The proper **army of crusaders,** the chivalry of medieval Europe, set out for the East under Godfrey of Bouillon, Hugh of Vermandois, Stephen of Blois, Robert of Flanders, Bohemond of Tarentum, and Raymond of Toulouse.
1097. **Nicæa is captured** by the crusaders in July, and they win a battle with the sultan of Iconium at Dorylæum; the principality of Edessa is created by Baldwin of Flanders.
1098. **Antioch is stormed** and yields to the crusaders, who, in their turn, are besieged, but rout their foes and open the way to Jerusalem.
1099. Bohemond is proclaimed prince of Antioch.
July 15, **Jerusalem is stormed** and conquered; Godfrey of Bouillon assumes the sovereignty of the city; the Islamites are defeated at Ascalon by Godfrey and Tancred.
1106. **Henry I.,** the successor of William Rufus in England, having been attacked by the army of his brother, Robert of Normandy, defeats the aggressor and makes **Normandy a fief of England.**
1111. **Pope Paschal II.** is placed under **arrest** by Henry IV. of Germany, who thus secures the pontiff's consent to imperial investiture; the pope emphasizes his defeat by crowning the king, only to cancel all his concessions in the year following and to cause the **excommunication of Henry** by the council of Vienne.
1121. **Abelard,** notable among the founders of Scholastic Theology, is cited before the Synod of Soissons and his **books are burned.**
1122. Pope Calixtus II. having succeeded Paschal II., the difficulties between Henry IV. and Henry V. of Germany, on the one side, and the papal see on the other, are settled by the **concordat of Worms.** The German emperor concedes the privilege of **a free election of bishops;** the first Lateran council follows in the next year.
1125. The death of Henry V. of Germany puts **an end to the Franconian dynasty;** Lothaire II., duke of Saxony, is elected to succeed to the crown.
1127. The count of Sicily, Roger II., **consolidates the Norman territories in Italy;** he is proclaimed duke of Apulia and Calabria.
1128. Conrad, duke of Franconia, is declared king of the Lombards in opposition to Lothaire of Saxony, with whom he has engaged in war; the struggle does not terminate until seven years later, when **Lothaire subjugates his enemies.**
1133. **Lothaire** makes a successful **campaign in Italy,** to sustain Pope Innocent II. against the attacks of the antipope Anacletus II.
1138. Conrad III., **first of the Hohenstaufen line,** becomes emperor of Germany; he engages in a struggle with Henry the Haughty, duke of Bavaria and Saxony.
Henry defeats Albert the Bear, on whom Conrad has bestowed Saxony, but dies in the following year.
1139. Guelph VI. is defeated by Conrad in an effort to obtain Bavaria; the **German emperor,** however, ultimately **gives Saxony to Henry the Lion,** son and heir of Henry the Haughty.
The right of **Stephen,** grandson of the Conqueror, to the crown of England **is disputed by Matilda,** wife of Geoffrey Plantagenet of Anjou, daughter of Henry I.
1140. **Abelard** before the Council of Sens **is accused of heresy,** but **is** reconciled to Saint Bernard, who has prosecuted him.
1141. **The forces of Matilda overcome Stephen** and make him a prisoner;

the struggle terminates twelve years later in a treaty between Stephen and Henry Plantagenet, Matilda's son, by which Henry is recognized as heir to the English crown.

1143. **Manuel Comnenus** reigns in Byzantium; he begins a **series of wars** against the Normans, Magyars, and Seljuks, lasting for nearly twenty years.

1146. **A new crusade** against the Infidels is preached by **St. Bernard,** the cause of the movement being the capture of Edessa by the Fatimites and the massacre of the Christians there.

1147. **Conrad III.** of Germany and **Louis VII.** of France support the crusade; their armies **march to Constantinople,** where they are hindered by the secret hostility of Manuel Comnenus.

1149. The **Christians,** after attempting to storm Damascus, are **forced to retreat;** they return to Europe, having lost thus far in the Holy wars about two million men, with no substantial gains.

1152. On the death of Conrad III., Frederick I. (**Barbarossa**) becomes **emperor of Germany.**

1154. Stephen of England dies and is succeeded by **Henry of Anjou** (Henry II.), who **founds the Plantagenet dynasty;** he adds his French possessions to the realm of England.

1155. **Frederick I.,** making an expedition into Italy, **restores the authority of Pope Adrian IV.,** which has been overturned in a republican revolution led by **Arnold of Brescia** eleven years previously; Arnold is **put to death.**

1157. Frederick Barbarossa moves on Poland and forces that power to yield to his suzerainty.

1158. He makes a successful siege of Milan, which has refused to acknowledge his authority.

1159. **Alexander III.** accedes to the papacy, whereupon Frederick sets up **Victor IV.** as **antipope** in opposition to Alexander.

1160. **Frederick** conquers Crema after a hard siege; he is then formally **excommunicated by Alexander.**

1162. Frederick replies to the excommunication of the pope by razing Milan; **a league of the Lombard cities** is formed against him and fourteen years after (1176), at Legnano, the forces of the league **defeat Frederick.**

1170. **Thomas à Becket,** archbishop of Canterbury, is **assassinated** as the result of his opposition to the decree of Henry II. that the secular courts must have jurisdiction over ecclesiastical offenders.

1171. The **Fatimite dynasty** of caliphs **ceases** in Egypt with the victories of **Saladin,** who establishes the line of the Ayoubites.

1174. **William the Lion,** king of Scotland, is **taken prisoner** by the English; he acknowledges the suzerainty of Henry II.

The choir of the **Cathedral of Canterbury** is built by William of Sens in connection with other structures that had existed from the eleventh century.

1177. The difficulties between Emperor **Frederick** of Germany and the league of the **Lombard Cities** are peaceably adjusted at Venice by the **intervention of the Pope.**

1180. **Henry the Lion,** representative of the Saxon line, is **deprived of his dominions** by Frederick of Germany, who grants Bavaria to the house of Wittelsbach; the remainder of Saxony is divided, the duchy of Westphalia falling to Cologne, and the eastern territory to Bernard of Ascania.

1183. The **peace of Constance** is declared by Emperor Frederick and the Lombard league; by the terms of settlement independence is conceded to the cities of the league.

1185. The **dynasty of the Comneni** in Constantinople **ceases.**

1187. The **Christian kingdom** established in **Jerusalem** in 1099 by the crusaders under Godfrey of Bouillon is **overcome by Saladin,** who dethrones King Guy of Lusignan; William, archbishop of Tyre, thereupon preaches the **third crusade.**

1189. **Richard Cœur de Lion** (the Lion Heart) succeeds his father Henry II. as king of England.

Frederick Barbarossa begins a crusade; forces from all parts of Europe hasten to join Guy of Lusignan in the siege of Acre.

1190. Frederick meets the Infidels at Iconium and defeats them, but is afterward drowned in the Calycadnus; Henry VI. succeeds to the crown of Germany. **Richard** the Lion Heart **joins the crusaders,** together with **Philip Augustus,** king of France.

1191. **Acre yields** to the besiegers; **dissensions arise** among the Christian princes, and Philip retires to his kingdom.

1192. **Richard** of England arranges a **peace with Saladin** and then starts on his return to Europe, but is taken and **imprisoned** by Leopold, duke of Austria, at the command of Henry VI. of Germany.

1193. **John Lackland,** the brother of Richard, seizes the English throne.

1194. **Richard** regains his liberty, **returns to England,** resumes his authority, and **puts down the civil war** engendered by the intrigues of John and Philip of France; he then engages in a successful war with Philip, but **dies** in the fifth year of the campaign.

The rule of the **Hohenstaufen** sovereigns is extended over the **two Sicilies.**

1195. The **Moors defeat Alfonso,** king of Castile, at Alarcos.

1197. Henry VI. dies and leaves the crown of Germany to his son Frederick II.

1198. Otho of Brunswick, son of Henry the Lion, is proposed as emperor by the Guelphs, and Philip of Swabia, brother of Henry, is chosen by the Ghibellines; the **war of the Guelphs and the Ghibellines** ensues, in which Philip is victorious.

1201. **A new crusade** having been proclaimed (1198) by **Pope Innocent III.,** Baldwin of Flanders, Boniface of Montferrat, and Simon de Montfort, with their forces and those of other princes, undertake an expedition; they engage the Venetians to transport them to the Holy Land, and in return they agree to conquer Zara, which has rebelled against Venetian rule.

1203. The **crusaders** attack the Eastern Empire and **capture Constantinople;** the emperor, Isaac Angelus, is restored to the throne from which he has been deposed.

The first **college of Inquisition** is constituted by Pope Innocent III.

1204. Saint Dominic de Guzman removes from Osma to Languedoc and founds the **order of the Dominicans,** which is confirmed by the pope, twelve years afterwards.

A revolution in Constantinople follows the restoration of the Emperor, whereupon the crusaders again take the city and plunder it; the Byzantine empire is divided, and with this division the **Latin empire** in the East **supplants the Greek empire,** Baldwin of Flanders ascending the throne. Much of the imperial territory is gained by the Venetians and by the Italian and French nobles. The Greek empire of Trebizond is founded by Alexis Comnenus; a year later the empire of Nicæa is established by Theodore Lascaris.

1205. **King John,** having succeeded to the throne of England on the death of Richard I. (1199), **loses Normandy, Maine, Poitou, Touraine, and Anjou, to Philip Augustus** of France.

Baldwin, Latin emperor of Constantinople, is defeated in battle and taken prisoner by Joannice, the czar of the Bulgarians.

1206. **The empire of the Mongols** is established by **Genghis Khan,** who invades China and subdues the Chowaresmians, whose territory reaches from India to the Caspian sea.

1208. **A crusade against the Albigenses,** a rationalistic sect, under the protection of Raymond of Toulouse, having been decreed by Pope Innocent III., they are massacred at Beziers (1209).

King John of England refuses to receive Stephen Langton, elected archbishop of Canterbury by command of Pope Innocent III.; all **England is laid under an interdict** by the supreme pontiff.

1210. Saint **Francis of Assisi,** the famous Italian monk and preacher, founds the order of **Franciscans,** which is confirmed by the pope thirteen years afterwards.

Philip of Swabia is murdered, and Otho IV. of Brunswick succeeds him as emperor of the Germans.

1211. Otho IV. makes an effort to win the two Sicilies from Frederick II. of Hohenstaufen, but fails; Frederick begins a **struggle for the German crown,** in which he is aided by Pope Innocent III.

1212. The Almohade ascendency of the Moors in Spain is broken by the united efforts of the kings of Castile, Navarre, and Aragon.

Thousands of French and German boys start for the Holy Land in the **Children's Crusade;** many perish on the way; many are sold into slavery.

1213. England is threatened by the French; **King John yields to the pope,** receives Langton as archbishop of Canterbury, delivers his kingdom to the pope, and receives it back as a fief of the papacy.

1214. Otho IV. of Germany is defeated by Philip Augustus of France at the battle of Bouvines.

1215. King John of England is forced by his barons to sign **Magna Charta** (the Great Charter), the most important provision of which is for the security of personal liberty, it being provided that no freeman shall be taken, imprisoned, or damaged but by the judgment of his peers or by the law of the land. The pope declares the charter to be null and void, and Langton is suspended from his archbishopric. The French faction among the barons sets up Louis, son of Philip of France, as king of England; in the following year the prince comes to Britain, but the death of John in that year and the accession of his son Henry III. put an end to the pretensions of Louis.

Frederick II. of Hohenstaufen gains the German crown.

Genghis, the Great Khan of the Tatar hordes, **captures Peking;** the city is pillaged and burned. The armies of Genghis in twelve years overrun the greater part of Asia.

1216. Henry III. accedes to the throne of England, and Honorius III. becomes pope.

1217. The **fifth crusade** is undertaken by Andrew II. of Hungary with other princes.

1218. He abandons the expedition, which is then led by William I., count of Holland, and John of Brienne.

1219. Damietta is conquered by the crusaders.

St. Francis becomes a Hermit at Monte Alverno and announces the miracle of the Stigmata.

1221. The **crusaders are defeated in Egypt** and forced to accept disadvantageous terms of peace.

1222. Andrew II. is compelled to sign **the Golden Bull,** the constitutional charter of Hungary, and the foundation of the privileges of the nobility.

1224. The Mongols who have subdued Bokhara, Turkestan, and Samarkand, attack and defeat the Russians on the Kalka.

1226. Louis VIII. of France dies after a reign of three years. Louis IX. becomes king; his mother, Blanche of Castile, being regent.

The Lombard cities reëstablish their league to oppose the domination of Frederick II. of Germany.

1227. **Genghis Khan,** on the eve of undertaking the conquest of Europe, **dies; his empire is divided** among his four sons.

1228. Frederick leads a crusade against the Infidels, and after a year arranges a peace with the sultan of Egypt by which the **Christians receive Jerusalem;** Gregory IX., who has succeeded Honorius III. as pope (1227), makes an effort to secure the territories of Frederick.

1229. **Gregory IX. establishes the Inquisition** as a tribunal.

1236. Frederick II. of Germany makes war on cities of the Lombard league.

1237. He defeats them at Cortenuova; three years later he advances against Gregory; in 1241 the death of the pope ends the war.

1239. The French and the English undertake a **new crusade** under the leadership of Richard, earl of Cornwall, and Thibaud, king of Navarre. It **ends in failure.**

1240. Batu Khan leads his Mongolian hordes into Russia, and the Slavic princes are brought into subjection.

1241. The Mongols advance on Central Europe, conquering the Poles, Silesians and Hungarians.

1242. They overrun Asia Minor.

1245. At the council of Lyons, Innocent IV. announces the deposition of Frederick II. of Germany.

1248. **A new crusade,** led by Louis IX. (**Saint Louis**) of France, is caused by the capture of Jerusalem by the Charismian Turks.

1249. Damietta is taken by the French crusaders.

Oxford University, oldest institution of the higher learning within the limits of the British empire, is founded.

1250. The Egyptians defeat the crusaders; St. Louis is made a prisoner, but is liberated for a ransom.

The first transepts of the Cathedral of York are completed on foundations laid by the Normans in the preceding century.

The **Mamelukes,** Tatar slaves who, as the sultan's bodyguard, have been converted into a powerful soldiery, **become the rulers of Egypt.**

Conrad IV. succeeds Frederick II. in Germany; he is opposed by William II., count of Holland.

1254. Conrad dies, and with him the Hohenstaufen line of emperors ends; William of Holland establishes himself in the sovereignty of Germany, while Conradin, Conrad's son, reigns over the two Sicilies under the regency of his uncle, Manfred.

1257. William of Holland having been slain (1256) in battle, Alfonso of Castile, and Richard Plantagenet of Cornwall, younger son of King John of England, are chosen to the throne of Germany; the latter, though crowned at Aix-la-Chapelle, fails of recognition.

1258. Manfred proclaims himself king of Sicily.

A war breaks out between Venice and Genoa.

Hulaku Khan, the Mongol, destroys the caliphate of **Bagdad.**

1260. Bela IV. of Hungary loses Styria to Ottocar II. of Bohemia.

The council of state is established in England under Henry III.

1261. **The Latin Empire** in the East **is overthrown** by Michael Palæologus, emperor of Nicæa, who founds a dynasty in Byzantium.

1264. Simon de Montfort, earl of Leicester, heads a rebellion of the English barons, who make Henry III. a prisoner.

1265. Henry III. permits the **representation of the Commons in Parliament.** De Montfort is slain at the battle of Evesham.

Roger Bacon, the famous English philosopher and monk of the order of St. Francis, begins the composition of his **Opus Majus.**

Dante Alighieri is born at Florence.

1268. Bibars, sultan of Egypt and Syria, subdues the Christian principality of Antioch and makes it a part of his realm.

1269. The Gallican church receives its fundamental charter from the **Pragmatic Sanction** of St. Louis.

1270. Louis IX. leads a new crusade against the Mamelukes; in the course of the expedition he dies, near Tunis, August 25; Philip III. succeeds to the throne of France.

1272. Prince Edward of England, who has accompanied St. Louis, withdraws from the crusade and it is **abandoned;** the **attempt to recover the Holy Land is not again renewed.**

Edward I. succeeds to the English crown.

1273. Rudolph of Hapsburg is chosen emperor of Germany; this is the beginning of the ascendency of **the House of Hapsburg.**

1274. St. Thomas Aquinas, the famous Italian scholastic theologian and philosopher, known by his sobriquets of "The Angelic Doctor," "Father of Moral Philosophy," and "The Dumb Ox," dies near Terracina, Italy, March 7th. His chief work, "Summa Theologiæ," greatly influences the opinions of succeeding philosophers.

1275. Kublai Khan establishes the Yuen dynasty in China.

1276. Rudolph of Germany wins Austria and other territories from Ottocar of Bohemia and sets his sons, Albert and Rudolph, to rule over them (1278).

1278. Ottocar, trying to regain his dominions, perishes in the attempt.

Roger Bacon's writings are condemned as contumacious and he himself is imprisoned for ten years. He spends the remainder of his life in scientific experimentation and philosophical inquiries.

1279. The seat of government in China is transferred by the Mongols under Kublai Khan to Peking.

1280. Kublai Khan makes the **Mongolian power supreme in China.**

Cambridge University, the second great seat of learning in the British empire, is founded.

1282. A successful revolution against the rule of Charles of Anjou in Sicily begins with a massacre of the French in Palermo, known as the **Sicilian Vespers;** Pedro III. of Aragon is made king.

1283. Edward I. of England subdues Wales.

Prussia, after a war of fifty years, is conquered by the Teutons.

1288. Othman or Osman (the Conqueror) begins a war of thirty-eight years' duration which establishes the Turkish empire in Asia Minor.

1290. On the death of Margaret, queen of Scotland, **Robert Bruce** and John Baliol begin a civil war for the possession of the throne, which, two years later, Edward of England adjudges to Baliol; the latter is renounced by Edward (1296) because of his alliance with France in a war against England.

1291. Malek el-Ashref, sultan of Egypt and Syria, conquers Acre, thus terminating the kingdom of Jerusalem; **end of the Christian power in the Holy Land.**

1292. Adolphus of Nassau is chosen emperor of Germany.

1296. John Baliol of Scotland refuses to acknowledge Edward I. of England as his feudal lord; an Anglo-Scotch war of thirty-three years' duration begins.

1297. William Wallace leads the Scots to a victory over the English at Stirling; he is defeated in the following year at Falkirk.

1298. Albert of Austria, son of Rudolph of Hapsburg, makes war on Adolphus of Nassau, emperor of Germany; Adolphus is defeated and slain, and Albert ascends the throne.

Pope Boniface VIII. makes war on the party of the Colonnas, and they are vanquished.

1300. Beginning of the literary period called the **Renaissance,** or **Revival of Learning,** marked by the ascendency of **Dante** in Italy and a century later by **Chaucer** in England. The age receives a great impetus from the spreading knowledge of Greek Literature in the fifteenth century, extending to the middle of the sixteenth century. The pope proclaims a jubilee of the Catholic church with indulgences to all who make pilgrimages to Rome. Dante becomes one of the Priors of Florence and is embroiled in political contentions.

1301. With the end of the Árpád dynasty, the crown of Hungary becomes elective.

Duns Scotus, surnamed the Subtile Doctor, becomes Professor of Theology at Oxford.

1302. Philip IV. (the Fair) of France summons the **first assembly of the States-General,** which includes the third estate or representatives of the burghers.

Flanders rebels against the French rule (established in 1279) and defeats the troops of Philip at Courtrai.

1303. The long-continued **disputes between France and the papacy,** growing out of the king's tax on ecclesiastical property and out of the pope's declaration of his superiority to all temporal sovereigns, culminate in Philip's arrest of Boniface VIII.; the pope is rescued from prison, but dies.

1304. Scotland is conquered by Edward I. of England.

1305. William Wallace of Scotland is **put to death.**

1306. Robert Bruce, the grandson of Baliol's rival, leads a rebellion against the English domination and is **proclaimed king.**

1307. Edward II., son of Edward I., succeeds his father as king of England.

The Knights Templars are banned by a decree of France.

1308. Albert of Hapsburg, emperor of Germany, is assassinated, and Henry VII. of Luxemburg is elected his successor.

1309. Pope Clement V., a Frenchman, **removes the papal court from Rome to Avignon** to escape the hatred of the Italian prelates; then follows (1309–77) the so-called "Babylonian Captivity" of sixty-eight years, ended by the return of Pope Gregory XI. to Rome.

1312. The **Knights Templars are condemned** by the council of Vienne; Molay, the grand master, and others of the order are burned in France two years afterwards.

Henry VII. of Germany, having led an expedition into Italy, fails in the siege of Florence and dies in the following year.

1314. Robert Bruce and the Scots win a victory over the English at **Bannockburn,** June 24.

An eight years' war for the possession of the German throne begins between Louis of Bavaria and Frederick of Austria, in which Louis is at last the victor.

1318. Dante completes the **Divina Commedia** after eighteen years of composition. He goes to Ravenna in 1320 and dies in the following year.

1324. Louis of Bavaria is excommunicated by Pope John XXII., whereupon the German king invades Italy and decrees the deposition of the pope; he is ultimately compelled to retreat (1328).

1326. The policy of Edward II. in supporting foreign favorites leads to a domestic rebellion; the wife of the king, with Roger Mortimer, takes Edward prisoner; in the following year Edward is deposed by Parliament, and soon after is assassinated; on his deposition Edward III. succeeds to the throne.

1328. Scotland is recognized as independent by the English king, and the war between the two nations ends.

The **Capetian** dynasty ceases in France with the death of Charles IV., and Philip VI. of **Valois** institutes a new dynasty.

1330. The Turks under Sultan Orkhan conquer Nicæa.

1332. Edward Baliol attempts to dethrone David Bruce of Scotland.

1333. Edward III. of England invades Scotland and defeats the forces of the regent, Archibald Douglas, in the battle of Halidon Hill.

1337. Flanders, under the leadership of Jacob van Arteveld, refuses to submit to the rule of Count Louis I.

Edward III. of England, with the aid of the Low Countries and Germany, undertakes a war against France for the purpose of uniting the two realms under the Plantagenet crown; thus begins an Anglo-French strife, the **Hundred Years' War,** destined to continue until 1453.

1339. Edward fails in an invasion of Flanders, but is successful elsewhere, and is proclaimed king of France.

1340. Chaucer, the Father of English Poetry, is born in London. He dies October 25, 1400.

1341. John III. of Brittany dies, and a civil war for the succession breaks out between his brother, John of Montfort, and his niece, Jeanne de Penthièvre, wife of Charles of Blois.

1342. Edward III. supports John of Montfort in opposition to France, which aids Jeanne de Penthièvre; the English king makes an invasion of Brittany.

1346. Pope Clement VI. secures the election of Charles of Luxemburg as emperor of Germany to displace Louis of Bavaria; the latter dies, and Charles is eventually accepted as emperor (1349).

Edward III. defeats Philip VI. of France in the **great national battle at Crécy,** August 26.

David Bruce invades England; he is overcome and taken captive.

1347. Calais is captured by the English.

Cola di Rienzi, called "the last of the Roman tribunes," leads a revolution in Rome.

1348. The **black death** spreads to Europe from the Orient, and by 1351 kills upwards of one half the population. See in VOCABULARY.

1353. The Genoese forces are vanquished near Sardinia.

1354. The Genoese meet the allied Venetians, Byzantines, and Catalans in a naval battle off Constantinople; the war between the states continues for twenty-seven years.

The Genoese are victorious in the gulf of Sapienza.

Rienzi, the tribune, **rules in Rome** for a season, but is overthrown and assassinated, October 8.

1355. Marino Falieri, doge of Venice, heads an unsuccessful conspiracy against the Council of "The Ten"; he is seized, condemned, and beheaded.

1356. At the decisive **battle of Poitiers,** September 19, John the Good of France is taken prisoner by the English under Edward the Black Prince; he remains in captivity until the treaty of Bretigny, four years later. The victories of the English at Crécy and Poitiers, due chiefly to the valor and efficiency of the archers, demonstrate the equality of bowmen with mailed warriors and thus contribute powerfully to the extinction of feudalism.

1358. The **peasants of France,** called the Jacquerie, **revolt.**

1364. Charles V. ascends the throne of France and the war with England is renewed.

1368. The Ming dynasty is established in China.

1369. Timur Lenk (Tamerlane), the Asiatic conqueror, descendant of Genghis Khan, revives the Mongolian empire; he makes a successful campaign against Khorassan, and captures Balkh after a siege of three years.

1371. David Bruce dies and Robert II., succeeding to the throne of Scotland, founds **the Stuart dynasty.**

Casimir the Great of Poland dies; with him ends the Piast dynasty; **Louis** the Great of Hungary acquires the Polish sovereignty.

1374. Chaucer is sent on a royal embassy to Italy.

1376. Gregory XI. leaves Avignon and ends the "Babylonian Captivity" by **restoring the papal court to Rome.**

1378. Urban VI. succeeds Gregory XI. in the papacy, and Clement VII. is elected antipope; with the election of Clement the **great schism** in western Christendom begins, which does not end for nearly 40 years (1417).

1379. The Genoese overcome the Venetians off Pola; in the following year they are forced to surrender at Chioggia.

1381. The **English peasants revolt** under the leadership of Wat (Walter) Tyler and John Ball; they seize London, but are soon overcome, and Tyler is put to death.

Joanna I. of Naples is deposed by Charles of Durazzo; she is put to death in the following year.

1382. The rule of Count Louis II. is rejected by the citizens of Ghent, and Philip van Arteveld, their leader, is made governor; the French interfere to restore Louis, and Philip is slain.

John de Wycliffe completes his **translation of the Bible** into English.

1384. Louis I. of Anjou dies; thus ends the struggle between him and Charles of Durazzo for the crown of Naples.

Philip the Bold of Burgundy acquires Flanders.

1385. Richard II. of England makes an invasion of Scotland.

1386. Chaucer becomes knight of the shire for Kent. In the fourteen years following he composes **the Canterbury Tales.**

Jagellon, prince of Lithuania, marrying Hedvig, daughter of Louis the Great of Hungary and Poland, is made king of Poland, as Ladislas II.; he establishes the Jagellonian dynasty.

The duke of Gloucester takes the place of regent for Richard II. of England.

1388. The Earl of Douglas is slain in the battle of Otterburn.

1395. The Union of Kalmar is effected, by which **Norway, Sweden, and Denmark are united** under one crown, Queen Margaret, the "Semiramis of the North," being the first sovereign.

1399. Richard II. of England is deposed and the **line of Lancaster** is established by Henry IV.

1400. Wenceslaus of Germany is deposed and Rupert of the Palatinate is elected to succeed him.

The Yu Ho canal in China is completed.

Death of Chaucer.

1401. The English parliament decrees the **burning of heretics.** The statute is aimed against the **Lollards,** a religious sect following the Protestant heresies of Wycliffe.

1403. Henry IV. of England overcomes the conspiracy of the Percys at the battle of Shrewsbury.
1405. The English make a prisoner of James Stuart, the crown prince of Scotland.
1406. On the death of the Scottish king, Robert III., the Duke of Albany becomes regent of Scotland.
1409. Gregory XII. and Benedict XIII. are deposed from the papacy at the council of Pisa, and Alexander V. becomes pope; *three* popes instead of *two* contend for the tiara.
1413. Rome is captured by Ladislas of Naples.
1415. **Henry V.** of England **defeats the French at Agincourt,** October 25.
The **University of Salamanca,** chief seat of classical learning in Spain, is founded.
Pope John XXIII. is deposed by the council of Constance.
John Huss, at one time rector of the university of Prague, a reformer advocating the doctrines of Wycliffe, is condemned for heresy and **burned at the stake;** in the following year Jerome of Prague, another prominent reformer, suffers the like martyrdom.
1419. The Hussites gain in numbers and make an attack on the town hall in Prague. A year later a crusade is made against them, but under the leadership of John Ziska they are victorious. Afterward they ravage Saxony, Franconia, and Bavaria; their uprising ends at the treaty of Iglau, by which Sigismund is accepted as king of Bohemia (1436).
The Portuguese, under the patronage of **Henry the Navigator,** sail to the Madeira islands.
1420. By the treaty of Troyes, Henry V. acquires the succession to the crown of France; he enters Paris. Two years later both he and Charles VI. of France die. Henry VI. of England is proclaimed king of France, the Duke of Bedford acting as his regent in the sovereignty of the French people. The French support Charles VII., the son of Charles VI., and the war between the two nations is resumed.
1426. James I. is set at liberty by the English; he gains the throne of Scotland.
1428. The city of Orleans is besieged by the English; a year later **Joan of Arc,** the Maid of Domremy, inspires the French to raise the siege.
1431. Joan of Arc is burned at the stake in the market place of Rouen, in May, and in December Henry VI. is crowned in Paris.
1437. James I. of Scotland is assassinated; James II. succeeds him.
With the death of Sigismund the Luxemburg dynasty in Germany and Bohemia comes to an end and Albert II. of Hapsburg succeeds to the crown.
1438–1450. Invention of printing by Gutenberg and others. The Mazarin Bible, first printed book of importance, is made 1450–55.
1439. The union of the Latin and Greek churches is decreed by the council of Florence, but the schism remains practically unaltered.
1442. Alfonso V. of Aragon gains possession of Naples.
1444. The **importation of slaves from Africa is begun** by the Portuguese.
1450. Normandy is regained by the French, and Guienne is taken from the English in the following year; the English are again defeated at Castillon (1453), where the **Hundred Years' war ends;** only Calais remains to England of all her continental conquests.
The **Renaissance,** or **Revival of Learning,** at first mainly a literary movement, **extends to the arts,** and in particular to architecture, modifying first the public structures of Italy and afterwards those of all Central and Western Europe.
1452. The Earl of Douglas is assassinated by James II. of Scotland.
Great exodus of **Greek Scholars** from Constantinople; they make their way into the more enlightened parts of Western Europe and greatly promote the oncoming revival of arts and learning.
1453. Mohammed II. (the Conqueror) captures Constantinople, May 29; the Emperor Constantine XIII., the last representative of the Eastern Empire, is killed. The **extinction of the Empire** marks the final subsidence of the forces of the ancient civilization.
1455. The English **Wars of the Roses,** in which the crown of England is fought for by the houses of York and Lancaster, break out; the Duke of York takes up arms against Henry VI. and his supporters.
1456. The **Turks capture Athens** and in a four years' campaign gain possession of nearly all of Greece.
1460. James II. of Scotland is accidentally killed while contending with the English in the field, and James III. succeeds to the throne.
Queen Margaret overcomes the Duke of York at the battle of Wakefield, December 31.
1461. The Yorkists, again defeated by the Lancastrians at St. Albans, February 17, are afterward successful, and Edward IV. is proclaimed king.
1464. Queen Margaret invades England; her forces are routed at Hexham, May 15.
1465. Henry VI. is captured and imprisoned in the Tower of London; a Yorkist ascendency of five years follows.
1470. Henry VI. is restored by the Earl of Warwick.
1471. Edward IV. invades England; the Lancastrians are overcome at Barnet, April 14, where Warwick is killed, and again at Tewkesbury, May 4; in May Henry VI. is murdered in the Tower.
1473. **Louis XI. of France** begins a **war against his feudatory princes;** in a contest of nearly five years, he is finally successful in breaking their power.
1474. **Isabella** ascends the throne of Castile and Leon. Through her marriage with **Ferdinand** of Aragon (in 1469) the way is prepared for the **union of all Spain** under their grandson Charles V.
1475. Edward IV. of England undertakes a brief war against France.
The Turks gain an ascendency in the Black Sea, and subdue the Crimea.
1477. René of Lorraine conquers and slays Charles the Bold at Nancy, January 5; Louis XI. of France makes a conquest of Burgundy; Mary, the daughter of Charles, retains possession of the Netherlands and Franche-Comté, and is married to Maximilian of Austria. Three years later, on the death of René, Louis seizes Anjou, and in the following year Provence is added to the French realm.
1482. The war between Maximilian of Austria and Louis of France relative to the French seizures of territory terminates with the treaty of Arras.
1483. Edward IV. of England, having put to death his brother (the Duke of Clarence), dies; and Richard III., last of the Plantagenet kings, succeeds to the throne.
1485. The Duke of Richmond vanquishes and slays Richard at Bosworth Field, August 22; this ends the **Wars of the Roses,** and the Duke of Richmond takes the throne as **Henry VII.,** thus establishing the **Tudor dynasty.**
1486. By his marriage with the princess Elizabeth of York, daughter of Edward IV., Henry VII. effects a union of the Houses of York and Lancaster. In the following year the pretender, Lambert Simmel, makes a futile attempt to secure the throne.
1487. **Bartholomeu Dias,** in a voyage along the coast of Africa southward, **discovers the Cape of Good Hope.**
1488. Anne de Beaujeu, regent for her brother, Charles VIII. of France, defeats the forces of Louis, duke of Orleans, who has tried to seize the French crown; the duke is made a prisoner.
James III. of Scotland is slain in a struggle with his nobles, and his son ascends the throne as James IV.
1491. Charles VIII. of France, by his marriage with the duchess Anne, gains possession of Brittany; in the next year Henry VII. of England makes a campaign against the French, but a treaty of peace is concluded at Etaples.
1492. Ferdinand and Isabella, after a war of ten years against the Moorish kingdom of Granada, enter the capital as victors, in January; with this event the **dominion of the Moors in Spain terminates.** Granada is incorporated with the Christian kingdoms. The Jews are expelled from the territories of Spain.

5. AGE OF GEOGRAPHICAL DISCOVERY AND THE REFORMATION.

1492. **Christopher Columbus,** leading an expedition under the auspices of Ferdinand and Isabella of Spain, **reaches America,** October 12, discovering Haiti (Hispaniola) and Cuba; on his second voyage, made in the following year, he discovers Porto Rico, and on his third voyage, in 1498, he reaches Trinidad and the coast of South America. Having returned to Hispaniola, he is arrested and **sent in chains to Spain** (1501), but is allowed his liberty and makes his fourth and **last voyage** in 1502. He dies in neglect and penury at Valladolid, May 20, 1506.
1493. Charles VIII. of France makes a treaty of peace with Maximilian, emperor of Germany, at Senlis.
1494. The Medici are driven from Florence, and **Savonarola,** the Italian reformer, restores the republican form of government.
The **Franco-Italian wars,** waged between France and Spain, break out; they continue for twenty-five years, having for their cause the claim of Charles VIII. to the throne of Naples. This throne Charles of Maine bequeathed to Louis XI.; in these conflicts the Italians range themselves alternately with the Spaniards and with the French.
1495. After a year's campaign **Charles** conquers Naples, but **is forced to withdraw from Italy** owing to a league formed against him by the pope and Ferdinand (of Naples), who regains the Neapolitan crown.
1497. **Perkin Warbeck,** a Fleming, who personates the Duke of York, secures the aid of James IV. of Scotland and raises an army to enforce his pretensions to the crown of England; he is imprisoned and is put to death, 1499.
The **mainland of North America** is discovered by **John Cabot.**
Vasco da Gama sails around the **Cape of Good Hope.**
1498. **Sebastian Cabot** traces a great part of the **Atlantic coast** of North America.
Vasco da Gama finds an all-water route to **India.**
Savonarola is **executed as a heretic** at Florence, May 23.
1499. Vespucci and Ojeda trace the coast of South America.
The **Swiss become independent** after war with Maximilian of Germany.
1500. Ludovico Sforza regains Milan from the French, who had seized it a year before.
1501. The **French,** by Louis XII.'s conquest of Naples and with the aid of Ferdinand of Aragon, **reëstablish their power in Italy.**
Cesare Borgia, son of Pope Alexander VI., gains dominion of Faenza, Rimini, and Pesaro, with the title of duke of Romagna.
1502. **War in Italy breaks out again** between the French and Spaniards, the French being driven from Naples after a conflict of nearly a year.
1503. Cesare Borgia, by reason of his bloody excesses at Sinigaglia, is driven from Rome.
1506. On the death of Philip I. of Castile, Ferdinand assumes the rule as regent for Joan the Mad.
Madagascar is discovered by Portuguese navigators.
1508. Maximilian of Germany, Pope Julius II., Louis XII. of France, and Ferdinand of Aragon form the **league of Cambrai** against Venice; the Venetians are overcome at Agnadello (1509).
1511. Pope Julius II. forms the **Holy League** for protection against France; in this Spain, Venice, and England, under Henry VIII., who has married Catherine of Aragon, daughter of Ferdinand and Isabella, are united against Louis XII.
1512. The **French** win a victory at Ravenna, April 11, but are **forced to withdraw from Lombardy,** and the Sforza dynasty is restored in Milan; Ferdinand of Aragon conquers Spanish Navarre.
The Medici regain their authority in Florence.
1513. **Henry VIII.** of England, with the aid of Maximilian of Germany, **invades France;** the French are overwhelmed in the **battle of the Spurs** at Guinegate, August 16; Térouanne and Tournai are taken by the English. England is invaded by the Scots under James IV.; they are defeated at **Flodden Field,** September 9, and James is killed; Queen Margaret becomes regent for her son, James V.
1514. Henry VIII. makes treaties of peace with Scotland and France.
1515. **Francis I.,** succeeding Louis XII. as king of France, **marches into Italy,** and with the aid of the Venetians defeats the Swiss allies of Milan at Marignano, September 13 and 14; he gains possession of Lombardy. Early in the next year he establishes the Perpetual Peace with the Swiss and makes a **concordat with Pope Leo X.**
1517. **Leo X.** decrees preaching of **indulgences** for the benefit of St. Peter's Church in Rome. In October, **Martin Luther puts forth his theses** at Wittenberg, and the Reformation begins in Germany.
1518. **Zwingli** begins the Reformation among the Swiss.
1519. On the death of Maximilian of Germany, Charles I. of Spain, his grandson, who is also the grandson of Ferdinand and Isabella, is elected emperor as **Charles V.;** Germany, Spain, the Netherlands, the Sicilies, and Sardinia are thus **joined in one sovereignty.**
1520. Francis I. of France entertains Henry VIII. of England in a meeting on the **Field of the Cloth of Gold,** near Guines.
Pope Leo X. issues a bull of **excommunication against Luther,** but the reformer burns the papal edict.
Christian II. of Denmark invades Sweden and establishes himself in its sovereignty; he is overthrown in the following year in a revolt of the Swedes led by **Gustavus Vasa,** who eventually **becomes king** (1523).
Fernando Magellan makes a voyage through the straits separating Tierra del Fuego from Patagonia; two years later he lands on the Ladrones and reaches the Philippines, where he is killed; one of his ships completes the **circumnavigation of the globe** (1522).
1521. Charles V. of Germany and Francis I. of France engage in a series of wars covering a period of more than a score of years; the conflict originates

in counterclaims to the possession of Navarre, Naples, Milan, and Burgundy. The French attack Navarre, but are repulsed and are then driven from Milan. Charles V. of Germany arranges the treaty of Bruges with Henry VIII. of England, by which the two powers become allies.
Hernando (Fernando) **Cortes,** having invaded Mexico in 1519, captures the capital and completes the **Spanish Conquest of Mexico.**
Luther is summoned before the **diet of Worms;** he is adjudged guilty of heresy against the teachings of the Catholic church.

1522. Charles V. of Germany attacks the French and defeats them at La Bicocca, in April; the English seize the occasion to land in France, and in the year following the allied Germans and English make a campaign against the French, but without success; the forces of Francis again invade Italy.

1524. The French withdraw from Italy and the **Chevalier Bayard,** one of their leaders, falls in the retreat; the Constable de Bourbon, who has transferred his allegiance from Francis to the German emperor, leads an imperial army into Provence; Francis crosses Mt. Cenis, captures Milan, and lays siege to Pavia.
The **German Peasants' war** breaks out in Swabia and Franconia, accompanied with frightful outrages; in less than a year the conflict is ended.

1525. The imperial troops defeat the army of Francis at Pavia, February 24, and make the French king prisoner; his mother, Louisa of Savoy, becomes regent; France forms an alliance with England.
East Prussia, conquered by the Teutonic Knights in 1226, is made by Albert of Brandenburg an hereditary principality under the suzerainty of Sigismund I. of Poland.

1526. A treaty is made at Madrid, January 14, between Charles V. and Francis I., by which the French king is set at liberty, having renounced all claim to Naples, Genoa, and Milan, and promised to restore Burgundy to the empire.
The sultan, **Solyman the Magnificent,** who has already conquered Belgrade (1521), vanquishes the Hungarians at Mohács, August 29, and occupies Buda; he soon withdraws.
Ibrahim Lodi of Delhi is overcome by the Mogul Baber, descendant of Tamerlane, at Panipat; the **Mogul dynasty in India** is thus established.

1527. The refusal of Francis I. to restore Burgundy to the empire brings on the second war between the French and Imperialists, in which France is aided by the pope, the Venetians, and the Sforzas (the league of Cognac); these desire to break down the power of the German emperor. **Rome is captured** by the forces of the Constable de Bourbon, who is slain in the assault; the pope is made a prisoner.
The **Medici are driven from Florence.**

1528. Henry VIII. of England and Francis I. of France join forces in the war against Charles V. of Germany. The French authority is renounced by the Genoese under the lead of Andrea Doria.
The Earl of Angus is driven from Scotland, and the power of the Douglases is ended.

1529. **Cardinal Wolsey,** having been made lord chancellor of England by Henry VIII., loses the king's favor and is deprived of his offices; he dies while under arrest on a charge of treason.
The reformers in Germany present a **protest** (hence the name **Protestant**) to the diet of Spires, April 19.
Charles V. and Francis I. make a **treaty at Cambrai,** August 5, by which Italy is surrendered to Germany; Flanders and Artois are declared to be free from French rule; the duchy of Burgundy is formally recognized as French.
Charles V. and Pope Clement VII. unite to restore the rule of the Medici in Florence, and besiege the city; Florence yields in the following year and the **Medici return.**
Sultan Solyman seizes Buda for the second time and makes an unsuccessful **attack on Vienna;** he then establishes on the Hungarian throne John Zapolya, waywode of Transylvania, who had been elected king in 1526.

1530. Pope Clement VII. crowns Charles V. of Germany at Bologna as king of the Lombards and emperor of the Romans; the emperor makes a grant of Malta to the Knights of St. John.
The **Protestant Confession of Faith** is presented to the diet of Augsburg.

1531. The **Protestant states** of Germany, with the Saxon elector at their head, form the **league of Smalcald** for mutual protection.
The Swiss Catholics rout the army of Zürich in the battle of Kappel, October 11, and **Zwingli is killed.**

1532. Christian II. of Denmark, having been deposed by his subjects, makes an unsuccessful attempt to recover his throne; he is imprisoned by Frederick II., his successor.

1533. Francisco **Pizarro,** the Spanish adventurer, completes the **conquest of Peru.**
Cranmer, archbishop of Canterbury, pronounces null and void the marriage of Henry VIII. of England and Catherine of Aragon, disregarding the decision of Pope Clement VII.; the king makes **Anne Boleyn** his queen.

1534. **England renounces the sovereignty of the pope,** and the parliament passes the Act of Supremacy declaring the king and his successors to be the protectors and only supreme heads of the church and clergy in England.
Paul III. succeeds Clement VII. in the papacy.
The **Anabaptists,** under John of Leyden, institute an anarchistic society at Münster which continues for a year.
Geneva abjures the rule of the bishop of the diocese and of the Duke of Savoy.
The **translation of the Bible into German** is completed by Martin Luther.

1535. **Henry VIII.** is formally proclaimed the **supreme head** of the English Church.
Sir Thomas More, successor of Cardinal Wolsey as lord chancellor, having refused to take the oath of supremacy, is found guilty of treason and **is beheaded.**
Charles V. of Germany subjugates Tunis.
The dynasty of the Sforzas in Milan ends and Charles V. seizes the territory, thus provoking a third war with France.
The French navigator **Jacques Cartier** ascends **the river St. Lawrence.**

1536. Henry VIII. causes Anne Boleyn to be put to death on a charge of infidelity; he then marries Jane Seymour. He makes Wales a principality, and the other small monarchies are destroyed.
Provence is invaded by Charles V. of Germany.
Christian III. captures Copenhagen and gains the ascendency in Denmark; he proscribes the Catholic church within his realm.
John Calvin publishes his **Institutes of the Christian Religion;** he makes his residence in Geneva, but in 1538 is expelled from the city.

1537. Alessandro de' Medici, duke of Florence, is assassinated.

1538. Charles V. and Francis I. make a truce of ten years at Nice; by this agreement France obtains Savoy and a part of Piedmont; in the following year, at Toledo, this truce is made a perpetual peace; Charles promises to invest Francis with Milan.

1539. The English parliament passes the **Six Articles,** defining heresy.

1540. Henry VIII. of England marries Anne of Cleves, only to divorce her and marry Catherine Howard. **Thomas Cromwell,** the king's vicegerent in ecclesiastical concerns, is put to death on a charge of treason.
Ghent revolts, but is overcome by Charles V. of Germany.
Paul III. sanctions the Society of Jesus (Jesuits) founded by Ignatius Loyola.

1541. The emperor, Charles V., fails in a campaign against Algiers.
Hungary is again overrun by the troops of Sultan Solyman.
Calvin returning from banishment regains his power at Geneva.
Fernando de Soto discovers the **Mississippi** river.

1542. Pizarro is assassinated in Lima, June 26.
Catherine Howard, wife of Henry VIII., is put to death.
The English army in Scotland wins the battle of Solway Moss, in November.
On the death of James V., Mary succeeds to the throne of Scotland with the Earl of Arran as regent; **Ireland is made a kingdom.**
Charles V. and Francis I. renew their contest, owing to the refusal of the German emperor to deliver Milan to the French.

1543. Henry VIII. of England joins Charles V. against France; in the same year he marries Catherine Parr.

1544. The English make a successful campaign against the Scots and burn Edinburgh.
The troops of Charles V. are defeated by the French at Ceresole, in April, but the emperor is able to enter Champagne, and Boulogne is captured by English invaders; a peace is arranged at Crespy between Charles and Francis, the combatants agreeing to restore all territories seized by either subsequent to the treaty of Nice.

1545. The **council of Trent** begins its sittings, but without attendance on the part of the Protestants; it continues in session, with some interruptions, until 1563.

1546. Cardinal Beaton, primate of Scotland, orders the burning of George Wishart as a heretic; the Cardinal is assassinated.

1547. **Henry VIII.** of England **dies;** he is succeeded by his son **Edward VI.,** with the Duke of Somerset as lord protector.
The troops of Edward defeat the Scots at Pinkie, September 10. In the same year the Six Articles of Religion are revoked.
A war begun in the preceding year between Charles V. of Germany and the allied Protestant princes of the Smalcald league ends in a **victory for the emperor** at Mühlberg, April 24; John Frederick, the elector of Saxony, is taken captive.

1548. The **Augsburg Interim** is promulgated in Germany, in which the decree of toleration to the reformers is declared, pending the decisions of the council of Trent.

1549. The **Act of Uniformity** in Public Worship is declared in England; the **Book of Common Prayer** is adopted.

1550. The English make treaties of peace with the French and the Scots.

1552. The Duke of Somerset, convicted of treason, is put to death.
The **Forty-two Articles** of the reformed religion in England are established by law; the number is afterward (1563) reduced to **Thirty-nine.**
Charles V. of Germany is attacked by Maurice of Saxony, the champion of Protestantism, who is supported by France; the emperor is forced to yield and by the treaty of Passau **freedom of worship** is accorded to the followers of Luther.
Ivan the Terrible extends the Russian dominion; he makes a successful campaign against the Tatars of Kazan and two years later overcomes Astrakhan.

1553. **Mary the Catholic,** daughter of Catherine of Aragon, succeeds to the throne of England on the death of her brother, Edward VI.; an unsuccessful effort is made by the Duke of Northumberland to secure the crown for his daughter-in-law, **Lady Jane Grey;** she is put to death in the following year (February 12, 1554).
Michael **Servetus,** the Spanish philosopher and physiologist, is **burned at the stake** in Geneva with the approval of Calvin.

1554. **Queen Mary** of England **espouses Philip II.** of Spain, son of Charles V.; he is made king of Naples and Sicily by his father, and a year later he receives the sovereignty of the Netherlands.

1555. The English reformers, **Nicholas Ridley** and **Hugh Latimer,** because of their religious teachings, are **burned at the stake,** October 16.
The **peace of Augsburg** makes an end in Germany of the war between the Catholics and Lutherans.

1556. **Cranmer,** archbishop of Canterbury, is **burned at the stake** as a heretic, March 21.
Charles V. resigns the crown of Spain to his son Philip; he is succeeded in the empire by his brother, Ferdinand I.

1557. The French, under the Constable de Montmorency, are defeated by the army of Philip II. at St. Quentin, August 10.

1558. Calais, the last stronghold of England in France, is retaken by the Duke of Guise.
Francis the dauphin **marries Mary Stuart** of Scotland.
Elizabeth Tudor, daughter of Henry VIII. and Anne Boleyn, succeeds to the throne of England, November 17.

1559. France, England, and Spain conclude the peace of Cateau-Cambrésis, by which Emanuel Philibert of Savoy receives back most of the possessions of his house; Philip II. takes in marriage the princess Elizabeth, eldest daughter of the French king.
John Knox preaches in Scotland; the reformers in that country rebel against the queen regent, Mary of Guise.
Philip II. of Spain makes his half sister Margaret of Parma regent of the Netherlands.

1560. The Scotch reformers make a treaty with Elizabeth at Berwick by which they secure the English forces as allies; Mary of Guise dies, and Mary Stuart, who succeeded to the French throne in the preceding year, and her husband Francis II., conclude with the reformers and Elizabeth the **treaty of Edinburgh.**
The Huguenots form the conspiracy of Amboise against the Guises; Francis II. of France dies and is succeeded by his brother Charles IX., his mother, Catherine de' Medici, being regent.

1561. Mary Queen of Scots arrives in her realm from France.
The Irish rebel under the leadership of **Shane O'Neill.**
The Knights Swordbearers are forced to cede Livonia to Sigismund Augustus of Poland and Lithuania; the last grand master of the order becomes a vassal duke of Courland.

1562. A limited **privilege of worship** is extended to the **Huguenots** by the edict of St. Germain. Massacres of the Protestants occur at various places, and the series of **Huguenot wars** thereupon begin. The Huguenots under Condé and Coligni are overcome at Dreux, December 19. In the following

year the Duke of Guise is murdered, in February; his death is followed by the Pacification of Amboise.

1563. The Calvinists proclaim the Heidelberg catechism.

1564. The **Huguenots establish a colony** on the St. John's river in **Florida.**

1565. Mary Stuart marries her cousin, Henry Stuart, Lord Darnley.
Mustapha Pasha makes an attack on Malta, which is repulsed.
The **Huguenots in Florida** are **massacred by the Spaniards** under Menendez de Aviles; **St. Augustine,** the oldest settlement of the white race in North America, is founded by the Catholics.

1566. Lord **Darnley,** husband of Mary Stuart, **assassinates Rizzio,** an Italian musician, secretary and favorite of Mary.
The nobles of the **Netherlands** form the league of the Gueux, or *Beggars;* they present a petition to the regent, Margaret of Parma; the refusal of their demands precipitates a **civil war.**
Hungary is invaded for the last time by Solyman the Magnificent, who dies at the siege of Szigeth; his successor, Selim II., storms the city and captures it.

1567. Lord **Darnley is assassinated,** and the queen marries the Earl of **Bothwell,** who is openly accused of the murder of Darnley; she is thereupon imprisoned and forced to abdicate in favor of her son, James VI., who reigns under the regency of Murray.
The rebellion of Shane O'Neill in Ireland is suppressed and its leader is killed.
The **Huguenot wars** in France break out afresh; the battle of St. Denis is fought, November 10, without decisive results.
The **Duke of Alva** reaches the Netherlands with a Spanish army to aid the regent, Margaret of Parma, in her contest against the league of the Gueux.

1568. **Mary of Scotland,** having escaped from imprisonment and formed a plan to regain her throne, is met by the forces of the regent Murray, at Langside, May 13; the queen is defeated and flees for refuge to England, but is **made a captive** by Queen Elizabeth.
The temporary peace of Longjumeau is concluded between the Catholics and Huguenots in France; the strife is renewed after the assembly of the Protestant leaders at La Rochelle.
Margaret of Parma, the regent William of Orange, and many of the nobles having withdrawn from the Netherlands, the Duke of Alva institutes the **Council of Blood;** the counts of **Egmont and Horn,** with many others, **are executed. William of Orange** and his brother, **Louis of Nassau,** make a campaign against the Spanish forces in the Netherlands, but are repulsed.

1569. The Moriscos in Spain rebel; in the following year they are overcome by Don John of Austria.
The Earl of Westmoreland, with the Earl of Northumberland, leads a **Catholic rising** in England.
The Huguenots are beaten at Jarnac, March 13; the Duke of Condé is taken prisoner and shot; the Huguenot army under Coligni is routed at Moncontour, October 3.
Cosmo de' Medici the Great becomes grand duke of Florence.
Poland and **Lithuania** are **united** under one sovereignty.

1570. Murray, the regent of Scotland, is murdered. The English make an invasion of Scotland. The Earl of Lenox becomes regent, but he is slain in the following year at the battle of Stirling; his successor, the Earl of Mar, yields in his turn (1572) to the Earl of Morton.
The **Catholics** and **Huguenots** in France **make peace** by the treaty of St. Germain.

1571. The pope, the Spaniards, and the Venetians unite in the **Holy League against the Turks;** the ships of the league, under Don John of Austria, are victorious at Lepanto, October 7.

1572. The Duke of Norfolk, accused of treason for conspiring with Mary Stuart to secure her escape from imprisonment, is put to death.
Henry, king of Navarre, marries Margaret of Valois, sister of Charles IX.
The **massacre of St. Bartholomew** occurs, August 24; Coligni and about thirty thousand other Huguenots are slain, whereupon the Huguenots again take up arms.
A general **rising of the Dutch against Spanish rule** takes place; they make William of Orange their leader. In the following year the troops of Spain conquer Haarlem, but besiege Leyden without success.
With the death of Sigismund Augustus the **crown of Poland becomes elective;** a year later Henry, duke of Anjou, brother of Charles IX., is chosen king, but on the death of Charles he ascends the French throne as Henry III.; he gives up the Polish crown, to which Stephen Báthori of Transylvania is ultimately elected (1575).

1573. The Huguenots, after a successful defense of La Rochelle, are granted toleration in France; two years afterward Henry of Navarre escapes from Paris and becomes their leader.

1576. The **Catholic League** is formed in France against the Huguenots by Henry, duke of Guise.
The revolting provinces of the Netherlands put aside all differences among themselves, and unite in the **pacification of Ghent,** to resist Spanish dominion; Don John of Austria is appointed governor by his half brother, Philip II. of Spain; he is not accepted by the provinces.
The plague rages in Milan.
Martin Frobisher, the English discoverer, makes his first voyage in search of a **northwest passage** to India.

1577. Henry III. of France and the Huguenots conclude treaty of Bergerac.

1578. Don John of Austria, governor of the Netherlands, is victorious over the army of the rebels at the battle of Gembloux, January 31; he dies, and Alessandro Farnese, duke of Parma, succeeds him.
Morocco is invaded by Sebastian of Portugal; he is defeated and killed at Alcazar Kebir.

1579. The **Union of Utrecht** is formed by the provinces of the Netherlands; this union, two years later, renounces the authority of Spain, declares complete independence, and settles the hereditary Stadtholdership of the nation on William of Orange-Nassau the Silent. This event is the **foundation of the Dutch republic.**

1580. Philip II. of Spain makes a campaign against Portugal and subdues it.
The German Lutherans publish the **Formula of Concord.**

1582. Ermak Timofeevich leads the Cossacks to the conquest of Siberia.
Pope Gregory XIII. reforms the calendar and declares that October 5 of the current year be changed to October 15; hence the Gregorian calendar or New Style, still in general use.
Jesuit missionaries reach China.

1583. **Newfoundland** is added by **Sir Humphrey Gilbert to the territories** of Queen Elizabeth.

1584. **William of Orange is murdered,** July 10; his son, Maurice of Nassau, becomes the head of the seven provinces of the Netherlands; the Duke of Parma, Spanish governor of the Netherlands, besieges Antwerp, and in the following year captures the city.
The Catholic league of France makes a treaty of alliance with Philip II of Spain against the French Huguenots.
North Carolina is reached by an expedition of **Sir Walter Raleigh;** the territory is named **Virginia** in honor of the queen; a second expedition is sent by Sir Walter in the following year to colonize Roanoke Island, but the attempt fails.

1585. The Catholic League takes up arms against Henry III. of France, but the king and the Catholics are reconciled by the treaty of Nemours; the war against the Huguenots is resumed.
Sir Francis Drake leads an English expedition against the Spanish colonies in America.
John Davis, the English navigator, sets out on a two years' cruise in search for a northwest passage to Asia.
England sends troops under the Earl of Leicester to aid the Dutch against the Spaniards.

1587. **Mary Queen of Scots,** implicated in the conspiracy of Savage, Ballard, Babington, and others, which was discovered in the preceding year, is beheaded February 8.
Henry III. of France is defeated by Henry of Navarre at the battle of Coutras.

1588. Philip II. of Spain sends the **Invincible Armada** against England to punish the English for giving aid to the Dutch; the Spanish fleet, under the Duke of Medina Sidonia, is overwhelmed by a tempest, and the remnant virtually destroyed by the English ships under Drake and Howard.
Henry of Guise enters Paris; the king, Henry III., is forced to flee from the city; the sovereign summons a meeting of the states-general at Blois; the assassination of the Duke of Guise is ordered and the duke is slain, December 23; on the following day the Cardinal of Guise is assassinated.

1589. Admirals Drake and Norris lead an English naval expedition in an unsuccessful attempt to liberate Portugal from the rule of Spain.
The Sorbonne and the parliament of Paris pass a sentence of deposition against King Henry III.; the Duke of Mayenne, the leader of the Catholic League, marches into Paris and is declared lieutenant general of the kingdom. Henry III. makes an alliance with Henry of Navarre and the Huguenots, and the combined forces move against Paris. The king is stabbed by an assassin while at St.-Cloud, August 1; he dies on the following day, thus **ending the dynasty of Valois. Henry of Navarre** (Henry IV.) **succeeds to the throne** and establishes the **Bourbon line** of French sovereigns.

1590. Henry IV. defeats the forces of the Catholic League under the Duke of Mayenne at **Ivry,** March 14; a Spanish army, under command of the Duke of Alva, joins the Catholic troops and delivers Paris from the king's attack.

1592. The Presbyterian church is established as the **National Church of Scotland** to supersede the Episcopal ecclesiarchy.

1593. **Henry IV.** of France **abjures the Protestant faith;** he is crowned in the following year at Chartres, February 27. On March 22 of the same year he enters Paris without opposition.

1595. He undertakes a campaign against Spain. A year later the Duke of Mayenne makes submission to the king, and with this act the **Catholic League is dissolved.**

1597. The Spaniards are defeated at Turnhout by the Dutch under Maurice of Nassau, aided by his English allies.
The Dutch complete the **first voyage to the East Indies** by way of the Cape of Good Hope.

1598. Toleration is conceded to the Huguenots by the **Edict of Nantes,** proclaimed by Henry IV. of France, April 13; in the same year a treaty between France and Spain is concluded at Vervins.
The Rurik dynasty ends in Russia with the death of Feodor I., and Boris Godunov ascends the throne.

1599. The **Earl of Essex,** favorite of Elizabeth, having been sent to Ireland against the rebels under Hugh O'Neill, earl of Tyrone, enters into a conspiracy with the insurgents; for this treachery he is **put to death** (1601), when the revolt is suppressed by Lord Mountjoy.
Sigismund Vasa tries to establish the Catholic religion in Sweden and is **driven from his throne** for his defection from the national faith.

1600. The French invade Savoy and seize the authority; terms of peace are arranged in the following year.
The archduke Albert of Austria, governor of the Netherlands, is overcome by the Dutch under Maurice of Nassau at Nieuport.
The philosopher **Giordano Bruno,** after seven years' imprisonment in Rome by the Inquisition on a charge of heresy, is **burned at the stake.**
The **English East India company** is formed.

1601. The **Portuguese navigators** reach **Australia.**

1603. Bartholomew Gosnold makes an unsuccessful effort to colonize the coast of Massachusetts.
The Tudor dynasty in England ends with the **death of Queen Elizabeth,** March 24; James VI. of Scotland, the son of Mary Stuart, receives the crown as **James I.** A conspiracy to place Arabella Stuart on the throne is unsuccessful, and its promoter, Sir Walter Raleigh, is imprisoned.

1604. The English bishops and the Puritan leaders meet in a **conference at Hampton court.**

1605. **Guy Fawkes** forms a conspiracy to blow up the king and parliament of England, but the plot is discovered and the leader is seized, November 5.
Feodor II. succeeds to the Russian throne on the death of Boris Godunov; he is afterward dethroned by the Pseudo Demetrius, claiming to be the son of Ivan IV., whom Boris has put to death.
The Turks are overcome at Bassorah by Abbas the Great of Persia.

1606. The Pseudo Demetrius of Russia is slain; he is succeeded by Shuiski, who takes the title of Basil IV.
The **London and Plymouth companies** are chartered by patents of James I. of England.

1607. **Jamestown,** in Virginia, first permanent English settlement in North America, **is founded** by the London company, May 13.

1608. The Protestant states of Germany establish the Evangelical Union.
Rudolph II. of Germany is forced to give up Austria, Moravia, and Hungary to his brother Matthias.
The French under **Samuel Champlain** found **Quebec.**

1609. A Catholic league is formed in Germany; Rudolph II. is compelled to grant religious toleration to the Bohemians; two years later (1611) he is forced to surrender his crown to Matthias.
A treaty of peace for two years is made by Spain and the Netherlands.
The **Moriscos** are finally **driven out of Spain** by Philip III.
Lake Champlain is discovered and named in honor of the discoverer.
Henry Hudson, sailing under the flag of the Dutch West India Company, ascends the Hudson river; in the following year he explores Hudson Bay, but perishes on the voyage.

1610. The *second* Pseudo Demetrius gains the throne of Russia by the aid of Polish nobles; in a short time he is assassinated.

Henry IV. of France is **assassinated** by Ravaillac, May 14; Louis XIII. becomes king, with Maria de' Medici as regent.
By means of his newly invented telescope **Galileo** discovers the satellites of Jupiter.
King James's version of the Bible in the English language is completed; the work is issued in the following year.
The Russians successfully repel an invasion of the Poles.

1613. The **Romanov dynasty begins** in Russia with the accession of Mikhail Romanov as czar.

1614. The Dutch build a fort on **Manhattan Island** and afterward purchase the territory from the Indians (1626).
The system of logarithms is invented by Lord John Napier.

1615. Louis XIII. of France marries Anne of Austria, daughter of Philip III. of Spain.

1616. The **circulation of the blood** is demonstrated by William Harvey.
Shakespeare dies, April 23.

1617. Concini, marshal d'Ancre, the favorite of Maria de' Medici, is assassinated, and she is sent into exile at Blois.
By the peace of Stolbova, Russia cedes Karelia and Ingria to Sweden.

1618. The **Thirty Years' War** begins in Germany with the insurrection of the Bohemians under Count Thurn; the conflict is caused by the insistence of the emperor Matthias on securing the succession in Bohemia and Hungary to his cousin, Ferdinand, duke of Styria, a Catholic, and therefore unacceptable to the Protestant states.

1619. **Arminianism** is condemned as heresy at the **synod of Dort.**
Ferdinand of Austria, having succeeded Matthias, is attacked in Vienna by the forces of Count Thurn, but is rescued and elected emperor as Ferdinand II.; Frederick V., elector palatine and son-in-law of James I. of England, becomes king of Bohemia.
British colonists at Jamestown, in Virginia, hold a representative assembly.
Negroes are brought by a Dutch vessel to Jamestown and are sold as slaves; this event is the **origin of African slavery** in the **United States.**

1620. Ferdinand II. of Germany is supported by the Catholic League; the forces of the **Protestants are defeated** at White Mountain, in November; the elector Frederick is forced to flee from Bohemia.
The Protestants are massacred in the Valtelline, and Spanish troops overrun the country; they are driven out by the French in 1624.
The **Pilgrim Fathers** of New England **land at Plymouth,** December 21.

1621. **Francis Bacon,** Baron Verulam, lord chancellor of England, is impeached on a charge of accepting bribes and is deprived of his offices.
Philip IV. ascends Spanish throne; he renews war with the Netherlands.
The system of **representative government is adopted in Virginia;** in the same year the cultivation of cotton is begun.
Gustavus Adolphus of Sweden begins a victorious campaign of nine years' duration against the Poles.

1622. War breaks out between Louis XIII. of France and the Huguenots.
Ferdinand II. and Gábor Bethlen, prince of Transylvania, who invaded Hungary in 1619, conclude a peace at Nikolsburg.
The Dutch West India company successfully colonizes the **New Netherlands.**
The first massacre by the Indians occurs in Virginia.

1623. Maximilian, duke of Bavaria, having made himself an ally of Ferdinand II., defeats Frederick V., the elector palatine, and is elected in his stead.
The first **settlement of New Hampshire** begins with a colony at Dover.
Dutch colonists of Manhattan build Fort Orange (Albany) on the Hudson.

1624. The London company is abolished and **Virginia** is placed under the **direct control** of the **English crown.**

1625. The wars of the Huguenots break out afresh in France, but a treaty of peace is made with Louis XIII. in the following year.
The cause of the German Protestants is espoused by **Christian IV.** of Denmark; he is **defeated** by the Catholics under **Tilly** at the battle of Lutter.

1626. The Duke of Buckingham is impeached by parliament.

1627. **Buckingham** makes a futile expedition to the isle of Ré to aid the Huguenots. A year later he is **assassinated** by Felton, August 23.

1628. Charles I. of England is forced to assent to the **Petition of Rights,** providing against the abuse of the royal prerogatives.
La Rochelle, the stronghold of the Huguenots, after resisting the besiegers for a year, is **forced to yield.**
In Italy, France and Spain oppose each other relative to the claims of Charles, duke of Nevers, to the possession of Mantua and Montferrat.
The **Massachusetts Bay company** establishes a colony at **Salem.**

1629. The Huguenot wars in France are terminated; Louis XIII. makes **Richelieu** his prime minister.
The **edict of Restitution** is proclaimed by Ferdinand II., whereby the Protestants are ordered to restore to the Catholic church all the property of which it has been dispossessed. A peace is concluded with Denmark.
Quebec is taken by the English.

1630. Ferdinand II. and Louis XIII. make the **treaty of Ratisbon;** Charles, duke of Nevers, is recognized as possessor of Mantua.
The governorship of the Massachusetts Bay company passes into the hands of **John Winthrop,** who leads a company of settlers to the peninsula of Shawmut, and **founds Boston.**

1631. Richelieu causes the arrest of Maria de' Medici because of her conspiracies against him; she makes her escape from France.
France and Sweden conclude the treaty of Barwalde.
Count Johann **Tilly** and Count Gottfried **Pappenheim,** the imperial generals, **storm Magdeburg** May 20; **Tilly's army is defeated** by the forces of **Gustavus Adolphus** at Breitenfeld, September 17; Gustavus moves forward to the Rhine. John George, elector of Saxony, occupies Prague.
Kent island, Maryland, is settled by William Claiborne.

1632. The Lech is passed by Gustavus Adolphus, in April; **Tilly falls** on the field of Rain, but his army enters Munich. The Swedes in Nuremberg are besieged by Count Albrecht von Wallenstein, but he is defeated at **Lutzen,** November 16, where **Gustavus Adolphus is slain;** Gustavus is succeeded on the throne of Sweden by his daughter, **Christina,** with Count Oxenstiern as regent. Frederick V., the elector palatine, dies.
Cecil Calvert, Lord Baltimore, is granted a charter to establish a colony in **Maryland,** and two years later Leonard Calvert settles St. Mary's.

1633. **William Laud** is chosen **archbishop of Canterbury.**
The Swiss Cantons and the German Protestant states form the union of Heilbronn; they undertake a war against the emperor and the Catholics, but are overcome (1634) at Nordlingen, September 6.

1634. **Wallenstein** is treacherously **murdered** at Eger, February 25.
The English begin the colonization of **Connecticut.**

1635. Ferdinand II. and the elector of Saxony conclude the peace of Prague.
Richelieu undertakes a campaign against Austria and Spain.
The French Academy of Arts and Sciences is founded.

1636. The Spaniards, the forces of the empire, and Charles of Lorraine join in an **invasion of France.** The imperial troops are defeated by Banér's army of Swedes, at Wittstock, October 4.
Providence is founded by **Roger Williams.**
John Hampden refuses to pay ship money as required by the third writ of that name issued by Charles I. of England; the court of exchequer refuses by a vote of seven to five to sustain his resistance.

1637. Burton and Bastwick, together with Prynne, who had previously been condemned, are sentenced to the pillory by the **Star Chamber.**
An attempt to introduce the **English forms of worship** into **Scotland** meets with vehement **resistance.**
New England colonists conquer the Pequot tribe of Connecticut Indians.

1638. The Scots declare the **abolition of episcopacy** in Scotland and publish the **National Covenant.**
Bernard of Weimar defeats the imperial army at Rheinfelden and conquers Breisach.
Aquidneck (Rhode Island) is settled by William Coddington; **New Haven** is colonized; **Harvard College,** the oldest institution of the higher learning in America, founded 1636, is named.

1639. The National Covenant is defended with arms by the Scots.
The Spaniards are defeated by the Dutch in a battle in the Downs.
A constitution is adopted by the colonists of Connecticut.
Horrox observes the first recorded transit of the planet Venus.

1640. The **Short Parliament** sits in April and May and is followed by the **Long Parliament,** which begins its session in November; the **Scots invade England.**
Frederick William, the Great Elector, becomes ruler of Brandenburg.
Catalonia revolts from Spain; **Portugal regains her freedom,** with John, duke of Bragança, as king, styled John IV.

1641. **Archbishop Laud is imprisoned** in the Tower of London; the **Earl of Strafford,** the king's adviser, is **put to death.** In the same year the **Star Chamber** and the **court of High Commission are abolished.**
A rebellion breaks out in Ireland.
Descartes publishes his philosophical system, in which the superstructure of all positive knowledge is based on self-consciousness.

1642. **Charles I.** of England engages in **open war with the parliament;** the **battle of Edgehill** is fought, October 23, without decisive results.
An unsuccessful conspiracy is formed in France against Richelieu by the Duke of Orleans and Bouillon, Cinq-Mars, and De Thou, with the result that Cinq-Mars and De Thou are put to death.
In this year **Richelieu dies.**
Jansen's teaching as to the doctrine of St. Augustine is condemned by Pope Urban VIII.
Tasman, a Dutch voyager, discovers **Van Diemen's land,** or Tasmania, and **New Zealand.**

1643. The **Westminster Assembly,** meeting to formulate a body of doctrine, continues its session until 1649.
Prince Rupert captures Bristol; the **battle of Newbury** is fought, September 20; the parliament subscribes to the **Solemn League and Covenant** as a bond between the Scots and the English, having for its end the support of Presbyterianism in Scotland and a contention for its supremacy in England and Ireland.
Louis XIII. of France is succeeded by **Louis XIV.,** May 14, with **Anne of Austria** as regent, and **Mazarin** as prime minister. The Duke d'Enghien defeats the Spanish at Rocroy, but the French are beaten by the imperial army at Tuttlingen.
Sweden is attacked by Christian IV. of Denmark.
A Union is formed by the **colonies of New England.**
Torricelli invents the barometer.

1644. The **Scots enter England;** at the **battle of Marston Moor,** July 2, the royalists under Prince Rupert are overcome by the allied armies of the Scots and the parliament under command of Fairfax and the earls of Leven and Manchester; the Covenanters are vanquished at Tippermuir.
Denmark is harried by Torstenson at the head of a Swedish army; he defeats Gallas at Jüterbock.
The **dynasty of the Manchus** begins in **China.**
Roger Williams secures a patent for the confederate government of the colonies of Rhode Island.

1645. **William Laud,** archbishop of Canterbury, is attainted by bill and **is beheaded,** January 10.
At the **battle of Naseby,** June 14, the royalists are defeated by Fairfax, assisted by Cromwell and Ireton; Bristol yields to parliamentary army.
Torstenson is victorious over the imperial army at Jaukai, March 6.
The Duke d'Enghien triumphs over Turenne at Nordlingen.

1646. **Charles I.** of England gives **himself up to the Scots** in May; the army of the Marquis of Montrose forthwith surrenders; the Prince of Wales seeks refuge in Holland.

1647. The Scots deliver **Charles** to the English parliament and he is **cast into prison,** January 30.
Maximilian of Bavaria is forced by Marshal Turenne and Wrangel (of the Swedish army) to agree to an armistice.
Masaniello leads an insurrection in Naples.
George Fox founds the **Society of Friends.**

1648. The **English royalists** rise in arms for the deliverance of Charles I.; they are aided by the Scots, but are **defeated by Cromwell.** The parliament adopts the **Westminster Confession of Faith** and the **Long Parliament** (later designated the Rump Parliament) **is purged by Cromwell.**
The **independence of Holland** is acknowledged by Spain.
Part of Prague is occupied by the Swede Von Königsmark.
The Thirty Years' War ends; treaties are signed at Osnabrück and Münster. A general treaty is signed at Münster and the **Peace of Westphalia** is completed, October 24. Holland and Switzerland are left independent of the German empire. Alsace is assigned to France, with Metz, Toul, and Verdun; Sweden receives Hither Pomerania, west of the Oder, Stettin, the island of Rugen, Wismar, the see of Bremen (apart from the city), and Verden, with other territories; Brandenburg has Further Pomerania, Halberstadt, Minden, and Karmin, with the succession to the see of Magdeburg; Saxony gains Lusatia; the Upper Palatinate is apportioned to Bavaria; and a new electorate is instituted for the Rhenish Palatinate. The Catholic, the Lutheran, and the Reformed creeds in Germany are recognized in full equality. The ecclesiastical connection of the states becomes definitely fixed. Since 1648 no European nation has changed its religion. **The political status of Modern Europe** is in large measure determined by this treaty. The principle of the **balance of power,** asserted at various times in ancient and medieval history, receives confirmation and may be said to have become established as a part of international law.

PART III. — MODERN HISTORY.

FROM 1648 DOWN TO THE PRESENT TIME.

A HISTORICAL GAZETTEER OF ALL EXISTING NATIONS AND OF THEIR DEPENDENCIES.

THE year 1648 may properly be taken as the date since which the leading nations of modern times may be regarded as distinct political entities, the attempt at a universal ecclesiastical bond having failed. From this date each nation may be treated historically as a separate fact, having its connection with the other states of Christendom, but independent of them. The event which determined this crisis in history was the Peace of Westphalia. The compacts then made ended the Thirty Years' War and brought a general pacification to Europe. It was now broadly evident that the religious struggle which marked the transition from the medieval to the modern period had spent its main force and had substituted definite for indefinite conditions. The general result was that Northern Europe was no longer under the authority of the Roman Catholic Church, and that, throughout the whole of Europe and its colonies, the conspicuous and dominant factor in the social organism was no longer a universal church, but the political state. Long denied, but accomplished facts were at last recognized, such as the independence of Switzerland and of the Netherlands. Furthermore the subsequent alignment of the nations in political alliances or wars was no longer on lines of religious sympathy or aversion.

The century and a quarter following the Peace of Westphalia was a period wherein ideas were germinating and further consequences were preparing. The wars of that period determined little and did hardly more than emphasize issues already raised. Thus the defeat of Kara Mustapha at Vienna in 1683, the victory of Clive at Plassey in 1757, the victory of Wolfe on the Plains of Abraham in 1759, accorded with but did not set in motion the currents of the age. All the results of that preliminary century and a quarter have not even yet been fully reached. Two however are evident, and in our own day have been rendered well-nigh complete. These are, first, the **extension of constitutional government** and, second, the **mastery exercised by the European** in world affairs.

The oldest still-existing written national constitution (that of the United States) was framed in 1787. Except Great Britain, France, and the United States, no nation possessed a constitutional government at the beginning of the nineteenth century. Since then constitutional government has become practically universal. In every independent nation, except Abyssinia, China, Morocco, Russia, and Siam, popular rights are now guaranteed under a constitution. Even Russia and China are already moving in the same direction, with slow and sometimes faltering but none the less advancing steps.

The predominance of the European is manifest in the fact that, except in portions of Asia, there is almost no corner of the globe in which the European, or his descendants, is not supreme. Practically the entire western hemisphere is occupied by self-ruling people of European stock. Africa, half of Asia, Australasia, Polynesia, in fact, all Oceania, have been parceled out among the European states as men divide up a farm.

Meanwhile steam and electricity have revolutionized the relations of mankind. Every habitable spot is now of comparatively easy access. The telegraph wires stretch everywhere across the continents and cables bind together the opposite shores of seas and oceans, uniting the islands which rise between. Regions, separate and remote, are brought into speedy and instantaneous connection. No part of the earth's surface is to-day isolated from the rest. Places the most isolated and unfamiliar may at any moment be flashed into sudden and world-wide interest and prominence. A partial enumeration of states and of their chief possessions, excellent and satisfactory a few years ago, is now no longer adequate.

In the following pages a panoramic view is presented of all existing states and of their dependencies, and of the salient features in their political and industrial life.

In the brief chronological tables attached to the descriptions of many of these states are summarized the main events of history since the Peace of Westphalia.

ABYSSINIA.

ABYSSINIA corresponds in the main with ancient Ethiopia. Its boundaries, formerly remote and vague, have been so curtailed that it is now shut off from the Red Sea and Gulf of Aden by the Italian dependency of Eritrea, by the French Somali Coast and by British Somali Land. The European powers have been confirmed in possession of these territories by treaties made at various times with Menelik, the Abyssinian emperor. The claim of Abyssinia to extend as far southward as the second degree north of the equator was regulated by treaty with Great Britain in December, 1907. But the internal integrity and independence of the empire have been maintained, notably by the crushing defeat inflicted in 1896 upon the Italian army at Adowa by the forces of Menelik.

The Abyssinians were converted in the fourth century and are regarded as a branch of eastern Christendom. Their sovereign asserts descent from Solomon. The government, industry, education and military system of the country are all primitive.

The area is estimated as 210,000 square miles and the population as 10,000,000.

AFGHANISTAN.

AFGHANISTAN is geographically a mountainous plateau, having the form of a quadrilateral lying between Northwest India and Eastern Persia. The Afghans, who are the predominant population of the country, are of unknown origin, though they are doubtless a residue of the old Aryan stock lying midway between the Iranians and the Hindus. The importance of both the territory and the people lies in the fact that Afghanistan is a sort of buffer state between British India on one side and Persia and Russia on the other.

The governmental organization of Afghanistan is made on the basis of tribes. Each tribe has its *malik* or chieftain. The provinces are subdivided into sections called *kandi*, and each section has a representative who sits in the council of the tribe. Over the provincial governments is the ameer of Afghanistan, who may be regarded as a feudal king, though the character of the monarchy is not clearly defined. The ameer is rather a dictator for life than a monarch. His rule is, first, over the military aristocracy of the country, and through that aristocracy his authority is dispensed to the tribes. If to this political situation we add the Mohammedan faith and practice we obtain a fairly adequate notion of Afghan society. The race, however, has a stronger disposition for political contention and for local independence than may be found in any other Mohammedan country.

The history of Afghanistan hardly extends beyond the middle of the eighteenth century. Indications, however, of historical events may be found as far back as the conquests of Tamerlane. The Sultan Baber added a part of Afghanistan to his dominions. The country belonged to India until Kabul was wrested from that dominion, in 1738, by Nadir Shah. A certain historical foundation was reached a little later under Ahmed Khan, who had kingly authority in the eastern provinces.

After the defeat of the Mahrattas by Ahmed, in 1761, the national character was established. After Ahmed came Timur Khan, who transferred his capital from Kandahar to Kabul. Of his twenty-three sons the fifth, named Zaman Mirza, succeeded to the throne; but certain of the other brothers contended for the distinction, and there was an epoch of war and anarchy. Finally, in 1818, Kamran Khan obtained the authority and held it for thirty years; but a large part of the country remained under the dominion of independent chieftains. At length, in 1842, one of the bravest among them, named Dost Mohammed, captured Kabul and made himself supreme. Before this, the Punjab, Kashmir, and Sind had all broken from nominal relation with Afghanistan and had subsided into Hindustan.

It was in the reign of Dost Mohammed that the interest of Great Britain, now firmly established in India, was turned to Afghanistan. In 1841, a revolt occurred in Kabul, in which Sir Alexander Burnes was killed and General Elphinstone injured. Soon afterwards Sir William Macnaghten was murdered by Akbar Khan, son of Dost Mohammed. Then it was that an agreement was made for the withdrawal of the British garrison from the country. The march of the 690 Europeans from Kabul to Jalalabad was one of the most tragic episodes of history. Only 23 of the number, including Dr. Brydon, reached Jalalabad, though 95 other prisoners were ultimately liberated.

To avenge this outrage the expedition of 1842, under General Pollock, was sent to force the Khaibar Pass and to relieve Jalalabad. Dost Mohammed was restored to the throne from which he had been driven and was left in undisturbed authority until 1863. Meanwhile, in 1850, the Afghans conquered Balkh, and in 1855, amicable relations were again established by the treaty of Peshawar between Dost Mohammed and the British government.

After the death of Dost Mohammed in 1863, Sher Ali Khan came to the throne. He was confronted at first with insurrections, but he was supported with the influence of Great Britain, and his authority was presently extended over Afghan-Turkestan. In 1872, the Oxus river from its source to the western boundary of Balkh was declared to be the frontier line of the Afghan kingdom on the side of Russia. This boundary was obtained by the influence of Great Britain, which had now adopted the policy of maintaining Afghanistan as the frontier barricade of her East Indian empire.

Sher Ali Khan was at length obliged to fly from Kabul into Turkestan, where he died. He was succeeded by his son, Yakub Khan, who was acknowledged as ameer; but these events led to a declaration of war by England. A British army was sent into the country, and Kabul was captured in 1878. In September of the following year a fierce riot occurred in the Afghan capital, and the British envoy and his followers were massacred. A second invasion was necessary in order to avenge the crime and restore order. In 1880 the British forces were withdrawn.

Yakub Khan was succeeded in 1880 by Abdur Rahman Khan, grandson of Dost Mohammed. Abdur Rahman was recognized and supported by British influence, and under these conditions a more regular and orderly government was established. The Afghan army was reorganized, first in 1869, then in 1890, and again in 1896, when a regular conscription was declared, and the soldiers were armed with European weapons. Abdur Rahman died in 1901 and was succeeded by his son Habib Ullah Khan, who in a treaty, made in 1905, solemnly promised to observe the agreements of his father to be guided by the advice of the British government in external affairs. By the Anglo-Russian convention of 1907, Russia declared Afghanistan outside the Russian sphere of influence, while Great Britain agreed not to annex any part of Afghanistan and not to interfere in its internal affairs provided the ameer fulfills his obligations to the British government.

The principal industry of Afghanistan is agriculture. Five classes of cultivators are recognized; namely, landed proprietors, tenants, *buzgurs* or subtenants, hired hands, and slaves. The principal products are fruits, including the apple, pear, almond, peach, quince, apricot, etc. The principal mines are of copper and lead, though iron is also produced and gold in small quantities. The leading manufactures are of silks and carpets. The lines of trade extending from Afghanistan reach into Persia, Bokhara, East Turkestan, and British India.

The area is about 250,000 square miles; and the population about 4,500,000.

ANDORRA.

THE REPUBLIC OF ANDORRA is situated on the south side of the Pyrenees between France and Spain. It claims an existence of more than eleven hundred years, going back to Charlemagne. Though practically independent, it acknowledges a sort of allegiance to France and to the Spanish Bishop of Urgel. Its

THE MATTHEWS-NORTHRUP WORKS, BUFFALO, N. Y.

government is that of a representative democracy. It is directed by a Council of twenty-four members, from whom a Syndic is chosen for life to act as governor or president. The people are almost all shepherds. The area is 175 square miles. The population is somewhat over 5,000.

THE ARGENTINE REPUBLIC.

The shore line of Argentina was traced by white men as early as 1512. Buenos Aires was founded by Mendoza in 1535 — thirty years before the founding of St. Augustine in Florida. The valley of the Rio de la Plata was in that period explored as far into the interior as Paraguay. At first this region was regarded as a province of the Spanish viceroyalty of Peru. This relation was held until 1620, when Buenos Aires (*Colonias de la Plata*) received a new provincial government from Philip III.

For a hundred and fifty-six years from this date, the state of quasi independence was maintained. At the end of this period, coincidently with the Declaration of Independence of the United States, the states of Bolivia, Uruguay, Paraguay, and the Argentine Republic, were united in a viceroyalty under the name of Buenos Aires. This union was maintained for thirty years, when a difficulty with Great Britain brought a British fleet to the Argentine coast; Buenos Aires and Montevideo were assailed and captured. At this time, Spain and Great Britain were at war, and it was the policy of the latter to conquer the dependencies of the former. A strong British force was expelled from the Argentine states in 1807, but in 1810, a popular revolution broke out, and after a war of two years' duration independence of Spain was achieved. A republic was declared, and the city of Tucumán became the seat of government.

The next important event was the alliance of Buenos Aires and Chile in war with Peru. It was at this juncture that the Portuguese gained possession of Montevideo. In the year 1824, the provinces contiguous to the river La Plata joined Buenos Aires in constructing a true republic. Las Heras was elected president. This led to a declaration of war by Brazil. The republic was hard pressed, and perhaps would have perished but for the mediation of England. By the influence of that power, peace was made in 1828, and the independence of Uruguay was guaranteed. The Argentine Republic was weakened by this struggle, but was compensated for her losses by the accession of Corrientes, Entre Rios, and Santa Fe. Upon this movement, a war ensued in which General de Rosas rose to power, being once president and twice dictator of Buenos Aires. The latter office he held for ten years, during which he administered the government with great energy. His policy was to reincorporate Uruguay and Paraguay with the republic. In 1852, Rosas was overthrown. Soon afterwards, the independence of Paraguay was acknowledged. A new constitution was formed, modeled after that of the United States. General Urquiza was elected president. Buenos Aires, resisting at first, gave in her adherence in 1855. Between that state and Paraná there was ill-suppressed hostility. In 1865, actual war broke out between the republic and Paraguay. Brazil and Uruguay joined the alliance against the smaller state. It was at this juncture that the Dictator Lopez appeared, leading a career as audacious as it was hopeless and vindictive until his defeat and death in 1870. Before the end of the war, insurrections broke out in the states of the allies; otherwise the threatened extinction of Paraguay might have been effected.

Argentina suffered in common with all the Spanish American republics from revolts and political disturbances. Scarcely a presidential election was held without an appeal to arms. The administration of President Mitre was disturbed in this manner in 1868. In April of 1870, General Urquiza was assassinated, and his son-in-law, a political adventurer, Lopez Jordan, made an attempt to seize the government, but in 1871, his faction was suppressed. Another incipient revolution ensued in the following year. About the same time, a Bolivian fanatic, calling himself the God-physician, headed a revolt, until his insurgents were put down and he himself was shot. Next came the invasion of Entre Rios by Lopez Jordan, and this abortive attempt was followed by the election of Avellaneda to the presidency. He held office for six years and was succeeded in 1880 by General Roca, and he by Dr. Celman. While political contests have been fiercely waged in the years since, there has been no foreign war and the internal condition of the country has been tranquil and prosperous. The boundary dispute with Chile, which at one time threatened war, was settled by arbitration in 1902.

Government. The political title of Argentina was, until 1853, The United Provinces of the River La Plata. In 1860, when Buenos Aires became a member of the confederacy, the title became Republica Argentina, or the Argentine Republic. The executive head of the government is a president who is elected for six years. The election is made by representatives, composing an electoral college, equal to twice the number of all the senators and deputies in the two houses of Congress. The Congress is composed of a Senate and a House of Deputies; the first consisting of thirty members and the latter of one hundred and twenty. The basis of representation is one deputy for every 33,000 of the population. In its general features the government is analogous to that of the United States of America. The president is assisted by a ministry composed of six secretaries. The local government of each of the fourteen provinces is administered in the manner of the typical state government in the United States.

Industry and Labor. About 33,000,000 acres of land are under cultivation, but this great area is only four and one half per cent of the whole country. The arable lands are estimated at 250,000,000 acres. Argentina is one of the finest agricultural regions in the world. Fourteen million acres are devoted to wheat, and the production is enormous. Next in importance are linseed, maize, oats, barley, alfalfa and sugar. Stock raising is carried on on a large scale. The dairy industry is important. Great quantities of mutton and beef are exported as well as wool, horns and hides. The primary pursuits are followed with more energy and better success than in the more tropical parts of South America. The salubrious climate, the open country, the plentiful distribution of running streams, the background of mountains, and the fertility of the soil, have all reacted favorably upon the people.

Religion. In Argentina the Roman Catholic religion was the religion of the State until the new order was established, by which all creeds are tolerated, with special favors to none. At the head of the Roman Catholic clergy is the archbishop, or metropolitan, of Buenos Aires, under whom are eight bishops. Protestantism has established itself in several forms by missionary effort, but Roman Catholicism is overwhelmingly prevalent.

Education. The higher educational system of the Republic includes the five universities of Cordova, Buenos Aires, Santa Fe, Paraná, and La Plata; colleges of law, medicine, and engineering; five Roman Catholic seminaries; two agricultural colleges; a school of mines; a military and a naval school. The system of primary education is free, secular and compulsory. The school funds are supplied partly by the central government by general taxation, and partly by the several provinces. The sum expended annually for elementary education is more than $10,000,000.

Defense. Since 1900 the army has been reorganized. The system is that of a national militia, in which all male citizens are enrolled from the twentieth to the forty-fifth year. Continuous service or training lasts a year with the annual contingent and three months with the great majority. Then passing into the reserve, the men are liable for drills and maneuvers and are obliged to take part in rifle practice annually until the expiration of ten years. They then are enrolled in the National Guard for ten years, and five in the Territorial Guard.

The naval program is in transition. It contemplates the acquisition of three 15,000-ton battleships, nine large destroyers, and twenty-one torpedo boats. In 1908 the navy comprised two battleships, four armored cruisers, and three protected cruisers, with a few gunboats, destroyers, torpedo boats, and nine miscellaneous vessels, mostly antiquated.

The area is 1,135,840 square miles. The population in 1905 was 5,678,197. The capital, Buenos Aires, with 1,025,653 inhabitants, is the largest city in South America. Argentina is the largest and most populous Spanish American state of South America.

1516. The river **La Plata** is discovered by Juan Diaz de Solis; he takes possession of the country in the name of Spain.
1580. Buenos Aires is rebuilt for the third time; by this means the city is rendered unassailable against attacks by the Indians.
1620. New provincial government established for the Colonies of La Plata.
1778. A **viceroyalty** is formed of the provinces **Rio de la Plata**, Paraguay, Uruguay, and Bolivia, with Buenos Aires as the capital; previous to this date, the government of these provinces has been subject to the viceroy of Peru.
1806. Great Britain gains possession of Buenos Aires and Montevideo; her occupancy is terminated in the following year.
1810. The **viceroy is expelled,** and on May 25, a *junta gubernativa* is established. Cordoba, Paraguay, and Uruguay refuse to recognize the *junta*, and civil war ensues.
1812. Montevideo, capital of the last province to retain its connections with Spain, is taken by the Republican revolutionists.
1813. A constituent assembly convenes in Buenos Aires; the Spanish flag is discarded, and the republic issues its own coin.
1816. A provincial congress assembles at Tucumán; the **La Plata States are declared independent,** and General Pueyrredon is appointed dictator of the republic.
1817. The Spanish troops suffer a severe defeat at Chacabuco.
1818. At Maipú, the Spanish force is again routed by the republican army.
1821. The republicans gain a decisive victory over the Spaniards; by this event, interference on the part of Spain is ended in **the republic.**
1825. The party called the "Unitarians," favoring a strong central government, gains an ascendency over the warring factions; this party succeeds in restoring quiet, and establishes a **new Constitution.** Rivadiva is made president, but is shortly after forced to resign by the malcontents, led by **Juan Manuel de Rosas.** Dorrego is elected governor of Buenos Aires.
1826. A counter revolution under Lavalle ensues. It is unsuccessful, and Rosas is elected governor, which position he retains for six years.
1828. The **independence of Uruguay** is recognized.
1835. Rosas declines reëlection to the office of governor, but accepts the position of dictator of the republic with unlimited powers; this office he holds until 1852. During this entire period, Congress is not convened; Rosas pursues his determination to annex Uruguay, and **civil war** continues without interruption for five years.
1840. Peace is concluded with Uruguay.
1845. New difficulties arise between Argentina and Uruguay. France and England make **armed intervention;** they blockade Buenos Aires and occupy the island of Martin Garcia.
1846. France and England are compelled to recall their fleets from the Argentine coast.
1851. Corrientes and Entre Rios, in revolt against Rosas, secede from the confederation.
1852. On February 3, Rosas is defeated at Monte Caseros, by the combined forces of Brazil, Uruguay, Paraguay, and the malcontents in Buenos Aires headed by Urquiza, dictator of Entre Rios; Rosas takes refuge in England. A short administration under Vincente Lopez follows, but Urquiza declares himself president, and on June 23, recognizes **the independence of Paraguay.** In September, another revolution takes place and Buenos Aires secedes from the confederation.
1853. Congress adopts a **new constitution** in May; Urquiza elected president.
1854. Buenos Aires remains independent; in December, a treaty is made with the Republic.
1855. In January, a second treaty is concluded with Buenos Aires, but attempts are still made to force a reunion; treaties are broken; war follows.
1859. Urquiza defeats the forces of Buenos Aires at Cepada, October 23. On November 10, by the treaty of San José de Flores, and in union with Paraná, Buenos Aires again enters the confederation.
1861. New difficulties arise on account of taxation; General Mitre completely defeats the federal troops, September 17. The President (Santiago Derqui) resigns in consequence; **General Mitre** is appointed president *pro tempore.*
1862. A **Congress** is called on May 25, **at Buenos Aires;** Mitre is elected president of the reunited confederation, December 14.
1865. The war of the Triple Alliance between the Argentine Republic, in league with Brazil and Uruguay, on the one side, and Paraguay on the other, breaks out, and continues for five years.
1866. Dissatisfaction arising out of the war with Paraguay occasions serious trouble in several provinces; the discontent is secretly encouraged by Peru, Chile, and Bolivia.
1867. Led by Videla, the insurrection against the government assumes serious proportions in Mendoza, La Rioja, and San Juan. Generals Pannero and Mitre, at the head of the federal forces, completely defeat the insurgents, May 14.
1868. General Sarmiento is elected to the presidency for six years.
1870. A rebellion breaks out in Entre Rios, headed by General Lopez Jor-

dan, son-in-law to ex-President Urquiza. **Urquiza is murdered** by the rebels. On September 23, Jordan is routed at Santa Rosa.

1871. In April, Jordan is again completely defeated; rebellion is suppressed.

1873. In May, Entre Rios is again invaded by Lopez Jordan, but the insurgents achieve no substantial success.

1874. Dr. Avellaneda becomes president; is in power for six years.

1880. After another unsuccessful rebellion, General Roca is elected president in September.

1881. A treaty is concluded with Chile, by which all the country east of the eastern crest of the Andes, including the greater part of Patagonia and a small part of Tierra del Fuego, is ceded to the Argentine Republic.

1886. Dr. Miguel Juarez Celman accedes to the presidency, June 13.

1890. Financial distress becomes so great as to **cause a revolution** which begins July 26. The administration of President Celman is charged with improvidence and mismanagement; the currency is inflated with enormous issues of paper money. President Celman obtains the mastery on the field, but the pressure of public opinion forces his resignation, August 5. General Carlos Pelligrini, the vice president, becomes president, on August 9, for the unexpired term, and the public confidence is restored.

1891. In October, the old National Bank is placed in liquidation, and a new bank is established. This financial crisis in Argentina involves the failure of the banking-house of **Baring Brothers**, London.

1892. Luis Saenz Peña is elected president for the term beginning October 12. The election is attended with unusual agitation and violent uprisings.

1893. Insurrectionary movements become general throughout the country; by September 25, it is evident that severest measures must be adopted. General Roca is placed in command of the army; he makes a vigorous campaign which ends, October 3, with the capture of the Radical leaders and the **suppression of the rebellion.**

1894. On January 22, President Saenz Peña tenders his resignation, in consequence of his disagreement with Congress and the Cabinet; he refuses to grant pardon to participants in the late rebellion, and Señor Uriburu, the vice president, is made president in his stead.

1896. A dispute arises over the boundary line as defined in the treaty with Chile; by the protocol of April 17, the difficulties that cannot be adjusted by the two nations concerned are submitted for arbitration to Queen Victoria of England. The British Government accepts the office of arbitrator.

1902. November 27, an award, satisfactory to both parties, by the King of Great Britain as arbitrator, settles the acute **boundary dispute** between Chile and Argentina. A treaty of arbitration, operative for ten years, is also signed between the two states.

1906. March 11, death of the president, Manuel Quintana, an able statesman and strong and honest president. The vice president, Dr. Figuero Alcorta, succeeds.

1908. December 16, the Chamber of Deputies passes the bill authorizing the expenditure of $75,000,000 for armament. Two large battleships are provided for and a third is authorized if deemed necessary.

1909. July, serious trouble threatens over a boundary controversy arbitrated for Bolivia and Peru by Argentina. War seems imminent throughout the summer, but is finally averted by Bolivia's acceptance of the adverse decision.

AUSTRIA-HUNGARY.

THE Austro-Hungarian monarchy in its present form dates from the 8th of June, 1867. On that day Francis Joseph, emperor of Austria, was crowned as king of Hungary in accordance with the action of the Hungarian Diet. The union of the two states under a single crown was complete in the executive and international sense, but the local independence of the Kingdom of Hungary was recognized and confirmed.

From the first part of the sixteenth century these two states have been joined by a personal union through their having common rulers. The injudicious course of the emperor Leopold I. in the latter half of the seventeenth century towards the Hungarians induced them to make a league with the Turks, an alliance which at one time threatened the existence of the German Empire. The combined armies of Turkey and Hungary, led by Kara Mustapha, made a successful advance on Vienna; Leopold saved himself by flight. But for the interference of the valorous Poles under John Sobieski a Turkish ascendency must have been established in Austria. The victory of Sobieski over the invaders, however, brought a reaction which carried the German army into Hungary and reduced that country to submission. The Hungarian elective monarchy was transformed into a hereditary kingdom in the relation of an appanage to the House of Austria. The occupation of Transylvania was effected, and the Turks were pressed back until the whole territory between the Theiss and the Danube was added to the Austrian dominion.

To these events succeeded the war of the Spanish Succession. (See SPAIN.) Before the conclusion of that contest Mantua had been secured by Austria, and by the Treaty of Utrecht a part of the duchy of Milan was added, together with the Spanish Netherlands and Sardinia.

The course of historical events in Austria during the eighteenth century is indicated in the preliminary outline of the German Empire. (See the GERMAN EMPIRE.) The emperors who held the shadowy scepter of the Holy Roman Empire were the rulers of Austria, and the history of Austria during this century was the substantial part within the dim circle of the imperial fiction.

During this century the emperors Leopold I., Joseph I., Charles VI., Francis I. (husband of Maria Theresa), Joseph II., Leopold II., and Francis II. reigned in succession. In the same interval several of these rulers were recognized as kings of Hungary. Such was Charles VI., who as king of Hungary was Charles III. The Pragmatic Sanction of this sovereign was heartily accepted by the Hungarians, whose Diet declared for Maria Theresa. Joseph II. refused to be crowned in Hungary, seeking to govern that kingdom by a foreign agent. The reign of Leopold II. was hardly more acceptable in the under kingdom. The constitutional rights of that kingdom, however, were strongly reasserted by the Diet in 1791, and during the reign of Francis II. the Hungarians were permitted to conduct their affairs as they would; the empire was satisfied with subsidies of men and money.

In the first half of the nineteenth century, the House of Austria constantly declined. Scarcely could it survive the terrific impact of Napoleon and his allies. In 1806 the dim traditional glory of the Holy Roman Empire which had hung like an aureole around the House of Austria was finally eclipsed. The pretensions of Ferdinand I. (Ferdinand V. of Hungary) were little regarded, and the Austrian Empire during the interval of his reign (1835–1848) sank into weakness from which only a feeble recovery was made when, after the revolutionary disturbances of 1848, his nephew Francis Joseph acceded to the throne.

The Hungarians, after having for a long time accepted the rulers of Austria for their kings, and after failing in 1848 in their own heroic effort for independence, yielded to the logic of events, and in the seventh decade accepted a monarchical union with Austria. The act of 1867, however, was hardly more than a recognition of a historical fact which had already been accomplished. By this act the Austro-Hungarian monarchy was established, and the constitution of this monarchy has since been maintained, the dual state taking the name of Austria-Hungary.

The chronology which follows shows something of the difficulties which the state has encountered. The struggles of 1897–98 are, however, only symptoms of the fatal weakness of Austria-Hungary. In the past the history of Austria has been the history of a dynasty, the House of Hapsburg — not the history of a nation. The present dominions of the house comprise peoples speaking many distinct languages and a far larger number of dialects. In the Europe of to-day one of the strongest political forces is the feeling of nationality, a kind of all-pervading family feeling on a grand scale, which strives after the union in one state of all who, speaking a common language, holding a common religion, and possessing a common inheritance of social customs and ideas, believe themselves to be of the same race and family. This feeling of nationality powerfully contributed to unification in Italy and Germany, and it as powerfully contributes to the disintegration of Austria-Hungary. The Slavs are drifting toward Russia and the Germans toward Germany, and the Magyars or Hungarians have nothing to bind them to the rest of the empire. If the various nationalities were confined to specific regions, the problem would be simpler, but they are intermingled everywhere. No one language is understood by all the members of Parliament, while in the army the number and variety of languages form an enormous obstacle to the effective handling of troops. On December 2, 1908, the emperor Francis Joseph completed the sixtieth year of his reign. During that period the Austro-Hungarian monarchy has passed through many vicissitudes. It has been defeated in more than one war, has been stripped of its Italian provinces, and has been crowded out of the German Confederation. Yet it has gained as well as lost. The racial antagonisms of its various peoples have grown less bitter, the relations between Austria and Hungary, its chief component factors, have become more amicable and better defined, its subjects enjoy a larger measure of political rights and, territorially, it has expanded toward the southeast.

Government. The government of Austria-Hungary is a hereditary, limited monarchy. The two kingdoms are united as to all imperial and international relations; each retains its autonomy in its own internal administration. The imperial elements in the government include foreign affairs, military and naval affairs, finance, international railways, and defense. The Hungarian army, however, is organized on an independent basis. Transylvania is virtually consolidated with Hungary. Croatia has the right of internal administration on the subjects of religion, education, and justice.

The imperial head of the dual monarchy is the emperor of Austria, who is also king of Hungary. The reigning dynasty is known as the Hapsburg-Lothringen. The crown descends according to primogeniture to male heirs first and afterward to female heirs.

The legislative authority is lodged jointly with the sovereign and the parliamentary bodies called the Reichsrath (Austria) and the Országgyülés (Hungary). In both Austria and Hungary there are Upper and Lower Houses. The Hungarian and Austrian Upper Houses are made up of royal personages, high ecclesiastics, and men of great wealth or who have rendered distinguished service The Austrian Lower House is chosen by universal, equal and direct suffrage of male citizens above twenty-four years of age. The Hungarian Lower House is chosen by more restricted suffrage of citizens of twenty years or over. The monarch can exercise legislative powers only with the coöperation and consent of the legislative bodies. The system of legislation for the dual monarchy as a whole is complicated. There are two "Delegations," each consisting of sixty members, twenty of whom are from the upper houses and forty of whom are from the lower houses of Austria and Hungary respectively. The Delegations are appointed annually, and the sessions are held alternately at Vienna and Budapest. The two Delegations ordinarily sit separately, but in case of a deadlock, meet in joint session. The Ministry is responsible to the Delegations, and the latter have the power of impeachment. There are three executive departments for the whole monarchy: the Ministry of Foreign Affairs and the Imperial House; the Ministry of War; the Ministry of Finance. In Austria local interests are largely cared for by the provincial legislatures, whose sphere of action is defined by the Constitution. In Hungary the measure of self-government, formerly enjoyed by the counties, has recently been largely curtailed, and the present tendency is toward a centralized administrative system.

Industry and Labor. Within the diversified territory of the Austro-Hungarian dominions the natural productions vary according to latitude, and still more according to altitude. Some parts of the empire reach up the Alpine slopes to the line of perpetual snow; other parts descend to the level of the Adriatic and to semi-tropical conditions. The chief industries are agriculture and mining. Stock raising and wool growing are important. With the exception of about 68,000 square miles of forest and those portions of the country which are much broken with hills and mountains, the greater part of the lands have been brought under cultivation; even the steep slopes and hillsides are converted into fields and pastures. Most of the agricultural products are demanded for home consumption. The animal products are exported to a considerable degree. The Austrian horses, horned cattle, sheep and goats, are as fine as any in the world.

The manufactures have been and are important and extensive. These include ironware, glassware, chemical preparations, hempen, flaxen and woolen fabrics, cotton goods, and, indeed, nearly everything suggested by the primary products of the country. Austrian and Hungarian commerce since the middle of the last century has greatly expanded. The government has given much attention to roads and thoroughfares, to canals and telegraphs, and to all the means of communication and commercial intercourse. The rivers have been improved. The navigation of the Danube was made free by the treaty of 1856; the ports of the Adriatic are outlets and inlets for commerce. The commercial treaty of April, 1865, with the German Zollverein, greatly relieved the conditions of trade. The general condition of labor, however, is poor and relatively unprogressive. The miners are virtually serfs of the operators. Ignorance and semi-slavery prevail among the industrial classes. For these reasons, labor agitations are common, and the anarchistic spirit shows itself dangerously. The recent political concessions have only partially alleviated the general discontent due to poor pay and a sense of glaring social inequality.

Religion. While the monarchy is Christian in profession, and while the monarch must be a member of the Roman Catholic Church, religious liberty is the law of the state. Not only is freedom of faith and conscience conceded, but political rights are made independent of religious profession. The several faiths recognized by the state are Roman Catholic, Old Catholic, Greek Catholic, Orthodox Oriental, Armenian Catholic, Evangelical, Gregorian Armenian, and Jewish.

Education. In Hungary and especially in Austria, during the last few years there has been a marked awakening in regard to education. This is manifested in new laws regarding instruction, in the opening of many additional schools and in the notable decrease of illiterates. In 1905 in Austria 91.3% of the children of school age were attending school and in Hungary in 1906, 78.3%. According to educational classification there are elementary schools, technical and high schools, colleges and universities. In 1905 in Austria there were 21,502 elementary schools, 244 gymnasia, 73 realschulen, 800 music schools, 4,130 technical schools giving elementary or advanced training in agriculture, commerce, mining, and all kinds of industries. The University of Vienna with 619 instructors and 7,360 students and the University of Prague with 441 instructors and 4,887 students are among the foremost in Europe. The Universities of Graz, Cracow, Lemberg, Innsbruck and Czernowvitz have altogether 755 teachers and 9,266 students. In Hungary in 1906 there were 19,064 elementary schools, 179 gymnasia, 41 realschulen, 1 Polytechnicum with 132 teachers and 1,233 students. The University of Budapest had 332 instructors and 6,068 students. The Universities of Klausenberg and Agram had a total of 292 instructors and 3,293 students.

Defense. The position of Austria-Hungary suggests a fortified frontier. The perimeter of the empire is 5,396 miles in extent. Of this line 1,050 miles is the Adriatic seaboard. The natural barrier of the mountains protects a considerable part of the border line and in many places the barricade of nature prevents invasion. At all strategic points on the exposed frontiers fortifications have been erected. The protection thus afforded is thought to be so effective that the capital has been left undefended. On the side of the Adriatic the naval port of Pola, which can accommodate the entire naval force of the empire, is strongly fortified.

The peculiar Constitution of the Dual Monarchy modifies the whole military system. In general it is based upon the German model, but the desire of Austria to increase to the utmost the fighting strength of the empire is not approved in Hungary. The Austrian Landwehr and Landsturm are distinct from the Landwehr and Landsturm of Hungary. The Hungarian national army, whose separate organization is guaranteed by the constitution of 1867, is composed of the two latter. Service is universal and compulsory, all males being liable between the ages of nineteen and forty-two. Changes in the system are contemplated, but at present a man usually is in active service three years, then seven years in the reserves, and then passes to the reserve of the Landwehr. Then, after two years, he is attached to the Landsturm. The Austro-Hungarian army on a peace footing consisted in 1907 of 352,914 men and 28,742 officers. On a war footing it was estimated to reach a total of 2,234,000 men.

The navy is designed to serve mostly as coast police and for coast defense. At present it comprises 9 modern and 3 old battleships, 3 armed cruisers, 5 cruisers, 4 torpedo gunboats, 9 destroyers, and 18 modern torpedo boats. Fourteen vessels of different strength are now building. The present naval program contemplates a formidable increase both in the number and size of the ships. On the Danube there is a flotilla of monitors.

The area of Austria is 115,903 square miles and the population is over 26,000,000. The area in Hungary is 125,430 square miles and the population is over 19,000,000.

BOSNIA AND HERZEGOVINA.

These two Slavic provinces at the extreme northwest of the Ottoman Empire were for years in a condition of chronic disorder, amounting to anarchy. In 1878 at the Congress of Berlin it was decided that they be handed over to Austria-Hungary for military occupation and administration. This measure brought about such tranquillity and prosperity as the provinces had never known. In October, 1908, the Austro-Hungarian Emperor caused excitement in diplomatic circles by the announcement of their definite incorporation in the empire, a measure in which Turkey and the rest of Europe soon acquiesced. The territory thus affected has an area of 19,702 square miles, with a population of about 1,600,000. One third of the inhabitants are Mussulmans. The national resources are great but undeveloped. The provinces are still under military rule, but the Emperor-king has announced his intention of soon permitting them to establish local provincial government.

1657. **Leopold I.** of Germany is crowned **king of Hungary; the Turks,** by their ascendency in Transylvania, contend with the German Emperor for the control of that country.

1664. The German army, under Montecuculi, wins the great **battle of St. Gothard,** August 1. The victory is followed by a treaty less advantageous to the Hungarians than Leopold might have claimed.

1683. The **Turks** and Hungarians under command of Kara Mustapha **invade Austria** and drive Leopold from his capital; the **Poles** under **John Sobieski** interpose, and by a great victory hurl back the Turks and preserve the political status of Europe.

1686. Buda is retaken from the Turks after a memorable siege.

1697. The victory of the Germans and their allies at Zenta leads to the **peace of Carlowitz,** by which the control of Transylvania is wrested from the Turks (1699).

1701. Austria becomes involved in the **war of the Spanish Succession.** (See FRANCE and SPAIN.)

1708. Mantua is ceded to Austria, in January.

1713. By the treaty of Utrecht, April 11, Austria obtains a portion of the **duchy of Milan.**

1714. By the treaty of Rastadt the **Netherlands** pass into the possession of Austria.

1715. **Naples** is acquired, November 15. Three years later, by the peace of Passarowitz, additions on the east are gained by Austria.

1735. Sicily and Naples are yielded to Spain.

1740. **Charles VI.,** the last of the male line direct of Hapsburg, dies and is succeeded by his daughter, **Maria Theresa,** who becomes queen of Hungary, October 20. The succession is disputed by Charles Albert, elector of Bavaria, and Augustus III. of Poland and Saxony. Spain makes pretensions to the sovereignty of portions of the Austrian territory, and **Frederick the Great** demands that Silesia be ceded to him. He makes an invasion of Silesia, in December, and the **war of the Austrian Succession** begins.

1741. On April 10, Frederick the Great defeats the Austrians at **Mollwitz.** France favors the elector, Charles Albert, and makes war in his behalf. An alliance between the elector and the French is arranged in Bavaria at Nymphenburg, in May. England, however, supports Maria Theresa. **Austria is invaded** by the elector, and the queen makes an appeal to the **Hungarian Diet.** The Bavarian, French, and Saxon allies overrun Bohemia, and capture Prague.

1742. Charles Albert is chosen emperor, as **Charles VII.** Frederick the Great defeats the Austrians, who have invaded Bavaria at Chotusitz, May 17; the **treaty of Breslau** follows, Austria ceding the greater part of Silesia to Prussia. The French retreat from Prague.

1743. Bavaria is occupied by the Austrians, and Saxony and Sardinia become the allies of Austria. In the following year the French invade the Austrian Netherlands; Charles III. of Naples makes war against Austria and wins a victory at Velletri.

1744. Frederick II. invades Bohemia. The French and the Spaniards win a victory over Charles Emmanuel III. near Coni. (See FRANCE.)

1745. Charles VII. of Germany dies, January 20, and his successor in Bavaria, Maximilian Joseph, makes a treaty with Maria Theresa. The French defeat the Austrians and their allies at **Fontenoy,** May 11. Frederick the Great, on June 4, is victorious at **Hohenfriedberg.** Francis Stephen, the grand duke of Tuscany, the husband of Maria Theresa, is elected emperor as Francis I., September 13. At Dresden a treaty is made between Austria and Saxony. The Italian territories of Austria are occupied by her opponents.

1746. The Austrians make a victorious campaign in Italy. Genoa is seized by them, but they are driven out. Marshal Maurice Saxe leads the French troops to a triumph over the allied forces of Charles of Lorraine, at the battle of Raucoux, October 11.

1747. The Austrians and Sardinians invest Genoa, but without success, and Saxe defeats the English supporters of Austria at Lawfeld, July 2. (See FRANCE.) Bergen-op-Zoom is taken by the French. Meantime an army is sent by Russia to the support of the Austrians.

1748. Saxe takes Maestricht. On October 18, a treaty of peace is signed at **Aix-la-Chapelle,** and with this treaty the **war of the Austrian Succession ends.** Austria yields Silesia to Frederick the Great, and cedes Parma, Piacenza, and Guastalla to Spain.

1753. Prince Wenzel Kaunitz is made chancellor by Maria Theresa.

1756. An alliance with France is made at Versailles, in May, to withstand the aggressions of Frederick the Great; the **Seven Years' war** of Austria and her allies against Germany and her allies **begins.** (See FRANCE.) Frederick the Great enters Bohemia, and the Austrians under Count George Browne are beaten at **Lobositz,** October 1.

1757. The Austrians under Charles of Lorraine and Count Browne are again defeated at **Prague,** May 6, by Frederick, and the city is invested. The Austrians administer a severe defeat to Frederick at **Kolin,** June 18; they occupy Silesia, but are defeated, December 5, at **Leuthen.**

1759. The Austrians and Russians under Laudon and Soltikov overwhelm the army of Frederick the Great on August 12, at **Kunersdorf.**

1760. In October, Berlin is occupied for a short time by the Russians and Austrians, but they are expelled, and on November 3, Frederick wins a victory over Daun at **Torgau.**

1763. On February 15, the peace of Hubertsburg is concluded by Saxony, Austria, and Prussia. The **Seven Years' war ends** and **Silesia** is finally **ceded to Frederick the Great.**

1772. A large territory adjacent to Hungary is acquired in the **partition of Poland** and erected into the kingdom of Lodomeria and Galicia.

1778. The contest known as the **war of the Bavarian Succession is begun.** Austria makes an effort to seize a portion of the Bavarian domain, and supports the claims to the throne made by Charles Theodore, the elector palatine. Prussia opposes Austria.

1779. The war of the Bavarian succession is **ended** by the **treaty of Teschen,** and Charles Theodore is recognized in the sovereignty.

1780. **Maria Theresa dies,** November 29, and is succeeded by her son, the emperor **Joseph II.,** who undertakes a general reform.

1781. Joseph II. issues an edict of toleration.

1787. The Emperor makes an unsuccessful attempt to seize Belgrade, and thus becomes engaged in a war with Turkey.

1789. The **Turks** at Focşani are **defeated** by the Austrians and Russians under the Prince of Coburg and Marshal Suvaroff.

1790. **Joseph II. dies,** February 20, and is succeeded by **Leopold.** On September 30, Leopold is elected emperor of Germany as Leopold II. In December, Brussels is occupied by the Austrians. An insurrection which had arisen in Belgium is quelled.

1791. The constitutional liberties of Hungary are reaffirmed by Leopold II., and freedom is given to the Protestants. In August a peace with Turkey is concluded at Sistova.

1792. **France declares war against Austria,** April 20. (See FRANCE.) **Leopold II.** dies, March 1, and is succeeded by his son Francis, who is elected emperor as **Francis II.,** on July 5.

1797. By the preliminary peace of Campoformio, Austria **cedes Lombardy, but obtains Venice,** October 15. (See FRANCE.)

1801. The treaty of Lunéville, February 9, between France and Austria confirms the stipulations of Campoformio. (See FRANCE.)

1804. **Francis II.** assumes the title of emperor of Austria with the style **Francis I.,** August 11.

1805. On December 26, the **peace of Pressburg** is concluded between France and Austria, by which Austria loses a part of her possessions.

1810. In April, **Napoleon marries Maria Louisa,** the daughter of the emperor of Austria.
Austria suffers from a severe financial panic; the government is unable to discharge its obligations.

1814. A **general congress** of the European powers assembles at **Vienna** in order to decide the political status of the continental powers. The congress opens, November 3, with Austria represented by Prince **Metternich.** The general acts of the congress are signed, June 9, 1815. According to the terms of these acts Austria is reinstated in the possession of all the territories in her domain at the beginning of the French revolution, save Belgium and Breslau and other portions which are added to the states of South Germany. The authority of Austria is restored in Lombardy, in the Tyrol, and in the region erected by Napoleon into the Illyrian provinces. Venetia, Venetian Istria, and Dalmatia are returned to Austria; Salzburg, also, is regained.

1815. Austria unites with Russia and Prussia in the formation of the **Holy**

Alliance, to govern Europe according to the principles of the Gospel as interpreted by themselves.

1821. Austria interferes to suppress the **popular uprisings in Italy.** (See ITALY.)

1831. Austria again engages in the strife in Italy. (See ITALY.)

1832. Bologna is occupied by the Austrians. (See FRANCE.)

1840. The Austrians in alliance with the English undertake an **expedition to Syria.** (See EGYPT.)

1848. A **revolution** breaks out **in Vienna,** on March 13. Metternich falls from power; Venice rebels against Austria, March 22, and establishes a republic with Manin at its head. Radetzky evacuates Milan a day later. In March, Charles Albert of Sardinia undertakes a war against Austria in order to free Italy from foreign domination. (See ITALY.) The movement against the government is renewed in Vienna, May 15, and the emperor Ferdinand flees from the city two days later. A pan-Slavic congress opens in Prague, June 2. The papal forces surrender to Austria at Vicenza, June 11. (See ITALY.) An insurrection occurs in Prague, but it is put down by Windischgrätz, in June. The **Hungarian national assembly** opens, July 5, and an **Austrian parliament** assembles, July 22. Jellachich, ban of Croatia, begins a war with the Hungarians, in September. A committee of protection is formed in Hungary, with **Louis Kossuth** as its chief, in September. Jellachich threatens Budapest, but the Hungarians advance against him, and he is routed, December 29. On October 6, Vienna breaks forth in general insurrection against the government, and the emperor flies for the second time. The Hungarians advance against Vienna, but the Austrian troops force them to retire, October 30. On the following day Windischgrätz storms Vienna. On November 21, the Schwarzenberg ministry is formed in Austria. The **emperor Ferdinand abdicates** the Austrian throne, on December 2, in favor of his nephew, **Francis Joseph.** The Hungarians under the leadership of Bem are triumphant over the rebellious Wallachs The forces under Görgey are forced to retreat before the advance of Windischgrätz, in the same month. The Hungarians under Perczel are defeated, December 29, at Moor.

1849. The Hungarians evacuate Budapest. A reinforcement comes to the aid of the Austrians in Transylvania in the following month. Schlick is defeated by Hungarians under Görgey at Mount Branyiszkó, February 5. Dembinski, commander in chief of the Hungarian forces, is vanquished at Kapolna, on February 26 and 27. The emperor Francis Joseph, on March 4, issues a proclamation in which he denounces the national autonomy of Hungary; he issues a constitution for the empire as a whole. On the following day, at Szolnok, the Hungarians win a victory. In the same month the imperial troops with their **Russian allies** are routed by the army under Bem. The Hungarians under Görgey make a successful advance against the Austrians, in April. The **independence of Hungary** is proclaimed at Debreczin by the Diet, April 14, and the country is declared a republic, with Louis Kossuth as governor. Arthur Görgey leads his force to a victory at Nagy-Sarló. Budapest is attacked by the Hungarians on May 21. In the following month the Russians under Paskevitch make an invasion of Hungary. The Austrians are victorious over Görgey on the Waag; they conquer Raab, in June. The battle of Szöny is fought, July 2. The Austrians regain Budapest, July 12, and the battle of Waitzen occurs, July 15, between Görgey and Paskevitch. The Russians overcome Bem at Schässburg, July 31. The **Hungarians are beaten** at Temesvár, August 9, by the Austrians under **Haynau.** Kossuth resigns the powers intrusted to him into the hands of Görgey, August 11. **Görgey surrenders** the army to the Russian general Rudiger, August 13, at Vilagos. Comorn yields and Hungary is again made subject to the emperor of Austria. This restoration is followed by great severities to the Hungarian patriots at the tribunals instituted in Budapest and Arad.

In March, the armistice between Austria and Sardinia is suspended. King Charles Albert of Sardinia is vanquished by the Austrians under Radetzky, at **Novara,** March 23, and the king abdicates in favor of his son (see ITALY), who arranges an armistice with the victors. The treaty of Milan is signed by Sardinia and Austria, August 6.

1850. Austria and the states allied with her reëstablish the federal diet of Germany, and the assembly opens its sessions at Frankfort, September 2. The emperor of Austria meets the sovereigns of Bavaria and Würtemberg for a conference at Bregenz, in October.

1852. The Austrian prime minister, Prince Schwarzenberg, dies and is succeeded by Count Buol-Schauenstein.

1855. The Emperor and Pope Pius IX. make **a concordat.**

1859. In April, Austria becomes involved in a **war with Sardinia and France.** (See ITALY.) A treaty is signed at Zürich by Austria, France, and Sardinia, November 10, by which Lombardy, except Mantua and Peschiera, is conceded to Victor Emmanuel of Sardinia.

1860. On October 20, the emperor of Austria issues a proclamation announcing the organization of the empire on a basis of **federation.**

1861. Francis Joseph, on February 26, issues a decree by which the reorganization of Austria is provided on a **constitutional basis** with a system of consolidation.

1864. Austria takes part in the **Schleswig-Holstein war.** (See GERMANY and DENMARK.) In April, the archduke **Maximilian,** brother of the Emperor, **acting at the instance of Napoleon III., accepts the crown of Mexico** as Maximilian I. (See MEXICO.)

1865. The Emperor and the king of Prussia meet at Gastein in August and it is decided that Austria shall govern Holstein, while Prussia shall rule Schleswig temporarily, and that Prussia shall possess Lauenburg, while Austria shall receive the value of that domain in money.

1866. An alliance is formed against Austria by Prussia and Italy, but the peace of Prague is signed by Prussia and Austria, August 23, and a peace with Italy is concluded at Vienna, October 3. (See GERMANY and ITALY.) **Count von Beust** is made minister of foreign affairs in Austria, October 30, taking the place of Mensdorff.

1867. Beust is made prime minister, February 7. The Austrian Empire is reconstructed according to **a dualistic scheme** submitted by **Francis Deak,** and the Hungarian constitution is restored, with a national ministry of which Count Andrássy is the premier. Francis Joseph, the emperor of Austria, is crowned king of Hungary on June 8.

1868. The Czech members of the Moravian and Bohemian diets resign and make formal statements setting forth demands for national autonomy.

1869. Autonomy is requested by the Poles of Galicia, and insurrections break out in Dalmatia.

1870. The concordat between Austria and Rome is abrogated.

1871. The ministry of Hohenwart in Cisleithan Austria seeks to quiet the agitation of the Czechs on a foundation of Bohemian autonomy, but the attempt is unsuccessful and Hohenwart resigns, October 26. This is followed by the resignation of Beust, November 6, and **Andrássy** becomes **minister** of foreign affairs.

1873. Francis Joseph Land is discovered by an **Austrian polar expedition** under Payer and Weyprecht, sailing in 1872; the new polar coast is not reached until 1874.

An international exposition is held in Vienna; a financial panic afflicts the country.

1878. By the **treaty of Berlin,** July 13, Austria undertakes the occupation and administration of Bosnia and Herzegovina. On July 29, the Austrians enter these countries, and after a desperate contest with the Mohammedan partisans the provinces are subdued in October.

1879. Count Andrássy resigns from the premiership in October, and is succeeded by **Baron Haymerle.**

1881. Baron Haymerle dies, in October, and in the following month **Kálnoky** is made minister of foreign affairs. An insurrection occurs in Dalmatia, in November, and the government issues a decree that the citizens of Bosnia and Herzegovina shall be subject to military service. In the following year there is a rising in Herzegovina.

1883. Austria-Hungary forms with **Italy and Germany an alliance** called the **Dreibund.** In the following year, the emperor, Francis Joseph, meets the sovereigns of Russia and Germany at Skierniewice, September 15 to 17. In August, 1885, the emperor has a conference with the Czar at Kremsir, in Moravia.

1887. The alliance with Germany and Italy is redeclared.

1889. The Crown Prince Rudolph commits suicide, January 30. The Emperor sternly refuses to entertain proposals looking to the establishment of Home Rule in Bohemia. The laboring classes in Austria, particularly in the cities, share the discontent which is prevalent throughout Europe; the mutterings of **socialism** are heard. A period of jealousy against Russia ensues on account of Slavic influence in Servia and on the Galician frontier.

1890. Count **Gyula Andrássy,** the leading statesman and diplomatist of the empire, **dies,** February 18. The peace of the empire is threatened by political and social agitations in the Balkan states and by riots and labor strikes in many cities. These troubles, aggravated by the opposition of the Home-Rule party in Bohemia, lead to the resignation of Count Tisza, the Hungarian prime minister, after fourteen years of service; he is succeeded by Count Szapary.

1891. The agitations of the previous year become acute; bitter strife occurs in the Diet between the Radicals and the Conservatives.

1893. Ministry of Count Taaffe (in office since 1881) is driven from power; the Emperor closes the Diet; anarchistic uprisings and Radical outbreaks in Prague and other cities follow.

1894. Anarchistic and labor riots occur in many parts of the empire. The Hungarian patriot Louis Kossuth dies in exile in Italy, March 20. **Civil Marriage Bill,** which makes the civil ceremony compulsory, but permits a subsequent religious rite, is passed.

1896. The **thousandth anniversary** of the **national existence** of **Hungary** is celebrated with imposing ceremonies.

1897. Prolonged struggles occur in the Austrian Parliament over the renewal of the *Ausgleich*, or the apportionment of general expense between Austria and Hungary, which had been established in 1867, renewable every ten years. The minority in the lower house obstruct all consideration of this question, from opposition to the Prime Minister Badeni, who, in the spring of this year, passes a decree requiring that all officials in Bohemia shall possess a full knowledge of the Bohemian language. This the Germans in Bohemia consider not only an arbitrary violation of their rights, but also a violation of the constitution. The commercial union is maintained on the basis of reciprocity until 1907, when the Ausgleich is renewed or restored after its lapse.

1898. Empress Elizabeth is assassinated by an anarchist, September 10. 50th anniversary of the Emperor's accession is celebrated, December 2.

1902. January 27, Vienna street railways change to electric traction. June 28, the Dreibund is renewed. (See GERMANY.)

1903. In January a new tariff schedule goes into operation, with duties greatly increased to meet the German tariff. Marked social unrest prevails, with student riots at Budapest, in March, and a revolt in Croatia which necessitates putting Agram under martial law.

February 17, a flood after an ice jam destroys 10 towns in Galicia.

1904. March 31, Austria and Italy conclude a treaty intended to aid in quelling trouble in the Balkan states.

In November serious disturbances occur in the lower house of the Hungarian Reichsrath, resulting in the suspension of its sessions.

During December student riots at Innsbruck, because of the purposed addition of Italians to the university faculty, cause strained relations with Italy.

1905. The year witnesses a grave crisis in the affairs of the dual monarchy, endangering its continued existence. Austria is prosperous and quiet, but the party of independence in Hungary gains great strength. On January 4 the Hungarian Parliament is dissolved, and on January 22 the ministry is defeated in a general election. On June 18 Count Tisza's resignation is accepted and Baron Fejervary is appointed premier. October 10, Parliament meets, but is prorogued the same day. October 16, Baron Fejérváry is reappointed premier, and October 19, forms a new cabinet. The adoption of the Hungarian language in the Hungarian regiments is demanded by the opponents of the government, and is met by offers of universal franchise.

1906. February 19, the Emperor as king of Hungary dissolves the Hungarian Parliament, the leaders having refused to form a cabinet unless the words of command in the Hungarian portion of the army are given in Magyar. In April a compromise is arranged, by which Parliament is to reassemble for the sole purpose of passing a bill for universal suffrage under which a new Parliament shall be elected. Alexander Wekerle accepts office as premier. May 21, Hungarian Parliament meets.

December, Austrian Reichsrath passes bill granting universal suffrage.

1907. May 14, the elections for the new Austrian Reichsrath, the first chosen on the basis of universal manhood suffrage, show the remarkable strength of the various **socialistic** parties. Of the 225 seats allotted the Germans, out of a total of 516, the Clericals win 117 and the Radicals 53. The Ausgleich (see 1897) is renewed.

1908. May 7, the **sixtieth anniversary** of the coronation of the **Emperor Francis Joseph.**

October 7, the government announces its intention to formally **annex Bosnia and Herzegovina.** Excitement follows in Servia, Montenegro and Turkey. The Powers consult concerning the assembling of a European Conference. A boycott against Austrian products spreads through Turkey and causes serious protests from Austria-Hungary.

November 11, the government announces that it will not assume the debts of the annexed provinces.

1909. January 12, Turkey accepts Austro-Hungarian payment of $10,500,000 and agrees to the annexation of Bosnia and Herzegovina by the latter. On February 26, the protocol is signed.
January 14, about 250 men are killed by an explosion in a coal mine at Veszprin.
March 31, the Servian note agreeing to the annexation of Bosnia and Herzegovina is accepted. (See SERVIA.)

BELGIUM.

THE position of Belgium has from time immemorial given the country an important standing among the nations of Western and Central Europe. From the days of Cæsar the Belgic territory has been the ethnic watershed between the Teutonic races on the one side and the Latin and Celtic races on the other.

The consolidation of Belgium with Holland, under the name of the Netherlands, which was recognized by the Treaty of Vienna in 1815, proved to be unstable, and after fifteen years the relation was broken by a revolution. It was at this period, namely, in 1830, that the modern kingdom of Belgium began to exist. The independence of the Low Countries had been confirmed 182 years previously at Osnabrück. The successive treaties of Utrecht, Aix-la-Chapelle, Nimeguen, and Ryswick, had, in general, perpetuated independence, but the territory had been enlarged and contracted, and the cities had been transferred from one master to another in a manner most injurious to nationality.

In 1715, the Belgic fortresses were assigned to Holland. The commerce of Antwerp and Ostend was turned aside in a manner to strengthen the Dutch ascendency. As an appanage of Austria, Belgium was ruled by Charles, duke of Lorraine, and afterwards by Joseph II. At the outbreak of the French Revolution, the republican armies of France made their way into Belgium, and the country was overrun. At the end of that contest, Brussels was the strategic point on which the allied powers converged against Napoleon; and it was within a few miles of the city that the fate of the first French Empire was decided.

The congress of Vienna, in rearranging the constitution of Europe, adopted the policy of making the Low Countries a barrier against any revival of French ambition. This project included Belgium with Holland. The two countries were accordingly made into the kingdom of the Netherlands and were assigned to Prince William Frederick of Orange-Nassau. In apportioning the obligations of the new kingdom the heavier burdens were laid on Belgium, whose interests were sacrificed in favor of Holland. This policy produced intense dissatisfaction, which was repressed for fifteen years, when the discontent expressed itself in revolt and revolution. From this insurgent movement the modern kingdom of Belgium took its rise. The revolution was successful, and in January of 1831 the independence of the kingdom was acknowledged. By the decision of a national congress the crown was given to Leopold of Saxe-Coburg, who was related to the reigning family in England. This connection brought with it the support of the British government, and the independence of Belgium was easily maintained.

During the period of eighteen years between these events and the French Revolution of 1848, Belgium pursued an even course of development, and the kingdom was not much shaken by the surrounding insurrections. The existing order was easily upheld during the reign of Leopold, who died December 9, 1865, and was succeeded by his eldest son, Leopold II., who is still (1909) on the throne. At the outbreak of the Franco-Prussian war, Belgium declared neutrality, and this policy was pursued throughout this terrible conflict.

Government. By the constitution of the kingdom Belgium is defined as a "constitutional, representative, and hereditary monarchy." The executive power is vested in the king. The Salic law prevails, and the crown descends according to the principle of primogeniture. In default of a legal heir the king may nominate his successor; but this must be done with the consent of the legislative branch of the government. The legislative authority is vested in a Senate and a Chamber of Representatives. The senators, numbering 110, serve for eight years, and are chosen, either directly by the electors or by the provisional councils, in proportion to the population of the provinces. The members of the Chamber of Representatives, numbering 166, are elected by direct vote in the proportion of one representative to each 40,000 inhabitants. The term of service is four years. The Senate and the Chamber hold annual meetings, and the session must continue for forty days. The Chamber of Representatives, acting in the English manner, has the exclusive right to originate bills of expenditure and taxation. By the law of 1899 the principle of proportional representation of parties was introduced. The number of electors for the Senate in 1907 was 1,358,840. About one half of these had one vote, a little more than a quarter had two votes, and a little less than a quarter had three votes. In the executive department the king is assisted by a ministry of eleven members, as follows: President of the Council and Minister of Interior; Minister of Science and Art; of Finance; of Public Works; of Foreign Affairs; of Justice; of War; of Agriculture; of Industry and Labor; of Railways, Posts and Telegraphs; of Colonies.

Industry. Belgium bears an industrial analogy on one side to Holland, and on the other side to France. From Holland it is distinguished by the possession of only the narrow coast line bounding West Flanders. From France it is distinguished by its position further north, and by its approximation to the general character of the Low Lands. The productions of the maritime district are of the same general character as those of Holland. In respect to mineral wealth, the difference is great. Next to England, Belgium is, in coal deposits, the richest country in Europe. In 1905 there were 212 coal mines. These require a vast army of miners. About two thirds of all the product of the mines is consumed in the country and the remainder is exported into Holland and France. So great is this industry and so closely connected with other enterprises that it is surpassed only by the agricultural interest. The soil of Belgium was originally unfavorable to production, but like Holland, the country has been reclaimed until, at the present time, the agriculture and horticulture of Belgium are hardly exceeded in any other nation. The lands are divided into small holdings and are brought to the highest stage of cultivation.

Next after agriculture and mining is the production of live stock. The horses of Belgium are chosen by the purchasing agents of almost every other state to be used in the cavalry service. The cattle and sheep industries also flourish, and the animal productions are not surpassed by any in Europe. The Belgian manufactures enjoy a reputation second to none. Many of the finest fabrics are produced in the factories and shops of this country. These include linen and woolen goods, cotton goods, laces, hosiery. Of very great importance is the manufacture of arms, and plate glass. Belgium has two ports of entry, Ostend and Antwerp. The commerce of the country is very extensive and is carried on with almost all the civilized nations. As in nearly all European countries, the workingmen of Belgium have been under oppressive conditions. For years the kingdom has been disturbed by strikes and riots in consequence, which sometimes have threatened revolution. Recently the condition of the workingmen has been alleviated as they have recognized and used their political power. But much still remains to be done.

Religion. While there is no religious establishment in Belgium, almost the entire body of the people belongs to the Roman Catholic profession. The Protestants of the kingdom number about 10,000, and the Jews about 4000. Religious liberty is guaranteed by the constitution. The Roman Catholic dioceses are six in number, and the deaneries 190. Religious institutions abound. In 1900 the convents and monasteries numbered 2,500 with 33,875 inmates, of whom 31,668 were women. The small Protestant establishment known as the Protestant Evangelical Church is governed by a synod, to which laymen as well as clergymen are eligible.

Education. There are four Belgian universities of the first class, namely, Brussels, Ghent, Liége, Louvain. These, according to the census of 1906, had in attendance 3,991 students. Connected with the universities are many special schools, as of engineering, arts, manufactures, mining. The Royal Academy of Fine Arts, at Antwerp, is one of the best institutions of its kind in Europe. The middle-class schools of Belgium number 128. Besides the institutions here mentioned there are about 80 colleges and other private institutions for the education of boys and girls. Most of these are under church control. The cost of primary instruction is met partly by the communes and partly by subsidies from the state. The industrial and professional schools number 80, with an attendance of 22,064.

Defense. The exposed position of Belgium has made the country from earliest times a battlefield. The frontiers of the kingdom rest on Germany, Luxemburg, France, the Netherlands, and the sea. Antwerp was long considered one of the best fortified cities in the world. The towns of Dendermonde and Diest are also powerfully protected. Liége, Huy, Namur, Mons, Tournai, and Ypres are fortified with great skill. The chief military arsenal of the kingdom is at Antwerp.

The army is now recruited by volunteers, but conscription can be employed in case of necessity. The term of service is nominally eight years in the ranks followed by five years in the reserves. The independence and integrity of Belgium being guaranteed by the great powers, the army is less important than in most countries. On a peace footing in 1908 it consisted of 49,909 of all ranks. There is no Belgian navy.

Area is 11,373 square miles. Population at last census was 6,922,395.

1648 to 1830. Belgium, as a **part of Holland,** shares the vicissitudes of the United Provinces until 1815, when the country is included in the Kingdom of the Netherlands. (See NETHERLANDS.)

1830. A congress of the powers in December recognizes the **independence of Belgium.** (See NETHERLANDS.)

1831. Leopold of Saxe-Coburg is elected king of the Belgians, June 4; on July 21, he ascends the throne. The Dutch defeat the Belgians in August, but a French army under the command of Marshal Gérard interferes and stops the advance of the Dutch troops.

1832. The French besiege the citadel of Antwerp, and it capitulates, December 23. By this conquest the Belgic revolution is completed.

1839. Luxemburg and Limburg are divided by Belgium and Holland.

1848. As a consequence of the revolution in France and the sympathetic agitation among the Belgians, the Chamber passes an **Electoral Reform Bill,** and abolishes the duty on newspapers.

1851. Great embarrassment is caused in the kingdom by the influx of French republicans escaping from the *coup d'état* of Louis Napoleon Bonaparte.

1857. The long-continued ascendency of the Conservative party is broken by the **triumph of the Liberals** in the general elections. A change of the Ministry follows, and a Liberal domination is established, which continues for twelve years.

1865. Leopold I. of Belgium dies, and is succeeded by his son, **Leopold II.,** December 10.

1876. An **international exhibition** of the objects and arts relating to public health and safety is held in Brussels; also a health Congress, extending from September 27 to October 4; also a geographical Congress, in which the recent explorations and discoveries in Africa are especially considered.

1879. A bill for improving the **primary educational system** is passed; the Belgian bishops protest against the law, and refuse absolution to teachers of normal schools, declaring the religious instruction given in the public schools to be schismatic.

1880. The **fiftieth anniversary of Belgian independence** is celebrated throughout the kingdom in June. An international **Congress on Education** is held in Brussels, in September; also an international Congress of Freethinkers; also an international Congress of Labor and Industry.

1881. The diplomatic **rupture with the Vatican** continues, and is attended with recriminations. An education bill is passed, by which twelve additional intermediate colleges and a hundred schools are established; the commercial treaty with Germany is extended.

1883. A law is passed taking away the exemption from military duty enjoyed by inmates of religious houses and teachers in seminaries.

1884. The **clerical reaction** leads to the overthrow of the Frère-Orban Ministry, and the formation of a new cabinet under the leadership of M. Malou.

1885. An international exposition of arts and industries is held at Antwerp. A number of **scientific and philanthropic congresses** are held in connection therewith.
The sovereignty of King Leopold over the Kongo Free State is announced.

1886. The deplorable condition of the Belgian miners leads to disastrous **strikes and labor riots,** the result of which is the obtrusion of the labor question on the government, the holding of a workingmen's congress in Ghent, and a great labor demonstration in Brussels.

1887. The labor agitation continues, and several acts are passed by the Chambers intended for the betterment of the working classes.

1888. A measure for improving the defenses of the kingdom arouses the jealousy of Germany; the Liberal party uses the agitation against the government. A rectification of the frontier line between Belgium and Holland is effected.

1889. The leaders of the **Belgian socialists** are arrested as agitators and anarchists. Alfred Defuisseaux and two others are tried and convicted of sedition and conspiracy against the government.

1890. Belgium makes a convention with the **Kongo Free State**, by which it is stipulated that Belgium shall have authority to annex the African republic after ten years have elapsed.

1891. The first international Socialistic Labor Congress is convened at Brussels, August 16; the sessions continue for a week. A general **strike** takes place among the **coal miners** on May 5, the declared object being to enforce the demand for universal suffrage. The dock laborers at Ghent, Antwerp, and Ostend, the metal workers of Brussels, and the mechanics in all the large cities, are "called out"; the strike ends in a few weeks without accomplishing the intended result.

1892. In January, Belgium unites with the Central European Alliance, a commercial league formed by Germany, Austria-Hungary, Italy, and Switzerland. The **demand for universal suffrage** continues to be the prevailing issue; the Chambers and the Senate spend the year in inconsequential debates. In May, Liége is terrorized by a series of anarchistic outrages.

1893. **Riots and strikes** prevail as a consequence of the continued agitation of the suffrage question; the disturbances extend to the army and to civil society in general. On April 27, the Chambers accede to the popular demand and grant universal suffrage with the right of plural or cumulative voting. The Constitution is otherwise amended.

1894. In the general elections the Liberals are completely overthrown by the Clericals and Socialists.

1895. A new school law requiring education to be religious and compulsory in the primary schools is passed.

1896. The king, on account of the charges of gross cruelty against the officials of the Kongo Free State, appoints a Supervisory Committee of Protection for that country, September 19.

1902. In March a bill is passed making **gambling illegal.** It provides for the suppression of the gambling clubs at Ostend and Spa.

1903. Criticism, by missionaries, of Belgium's treatment of natives of the **Kongo Free State** excites bitter discussion. Belgium's option of annexing the Kongo is not exercised, owing to British hostility.

1904. King Leopold denies the charges of cruelty to natives in the Kongo Free State and defends his policy. His opponents, including the missionaries, ask President Roosevelt to interfere, on the ground that pledges to the United States have been broken. King Leopold refuses to permit an international investigation.

1905. November 4, the Kongo commission of inquiry presents a report recommending measures for the prevention of the cruelties complained of in the Kongo Free State. The government presents a bill for the expenditure of $35,000,000 on the port of Antwerp.

1906. November 28, Parliament passes resolutions defending the administration of the Kongo Free State under King Leopold.

1907. December 4, the treaty, ceding the Kongo territory, and the Report of the Commissioners are submitted to the Chamber.

1908. April 14, the Kongo government makes formal reply to charges of cruelty towards the natives.
May 21, at Contich sixty persons are killed in railway accidents.
May 23, the **Socialists** make gains at the elections.
May 29, representatives from twelve countries are present at the International Polar Congress in Brussels.
August 3, Belgium agrees to submit all **Kongo disputes to arbitration.**
August 20, the **Kongo Free State is annexed.**

1909. December 17, **King Leopold dies** and is succeeded by his nephew, as Albert I. December 23, **Albert I.** is **crowned King of the Belgians.** In his coronation address he promises radical reforms in the Kongo.

BELGIAN KONGO (THE KONGO FREE STATE).

This name was given to a vast territory of about 900,000 square miles, with a supposed population of 30,000,000 persons, occupying the basin of the Kongo River. It was explored by Henry M. Stanley in 1879. The organization of this territory is the direct result of the Kongo International Association, founded by Leopold II. in 1882. The sovereignty of that association was recognized by the European nations and by the United States in 1884 and 1885, but its status was determined by the concerted action of the powers in the General Act. The navigation of the Kongo and its tributaries was declared free, the natives were to be protected and the slave trade suppressed. In case of any dispute connected with the State, any of the signatory powers was to accept mediation. The United States however abstained from ratifying these provisions on the ground that such participation was not in accord with its traditional policy.

The sovereignty of the State was vested in Leopold II., through whose person it had union with Belgium. The King, in August, 1889, bequeathed by will to Belgium all his sovereign rights in the State. A Convention in 1890 reserved to Belgium the right to annex the State after ten years. Serious charges were brought at various times of atrocious cruelties committed upon natives and there was excitement in Great Britain and the United States in consequence. Subsequent investigation tended to prove these accusations exaggerated. In November, 1907, a treaty of annexation was proposed and was long debated by the Belgian Houses, which shrank from assuming the responsibilities of government and administration of this African territory. The Bill was approved in August, 1908, and in November Belgium formally assumed the control, the new Ministry of the Colonies beginning its duties.

Coffee, cocoa and tobacco flourish on the government plantations. Rubber, palm nuts, palm oil and ivory are already exported in great quantities. Only a beginning has been made in the development of the immense tropical resources of the territory, and yet remarkable progress has been accomplished.

BOLIVIA.

In the country now called Bolivia in honor of Simon Bolivar, the Liberator, a civilization existed as far back as the first centuries of the Christian era. In the Titicaca basin, ruins are found which antedate any others of like character in America. Before the age of Charlemagne, an empire under a dynasty called the Piruà, had been created in this mountainous region, which might be classed, were the history accessible, with the great states of antiquity. This was succeeded, about the eighth century, by the kingdom of the Aymaras, which, though inferior, retained a measure of the ancient splendor. The Aymaras were conquered, in the fourteenth century, by the Incas of Peru. After this date, for about two hundred years, the history of the country was merged with that of the conquering state.

When the Spaniards, led by Francisco Pizarro, destroyed the empire of the Incas and reduced the inhabitants to cruel servitude, the conqueror turned his attention to the Aymaras, and in 1538, sent his brother Hernando to do by them as he himself had done by the Peruvians. The southern region was organized into a dependency known as Charcas or Upper Peru. Throughout the whole viceroyalty the enslavement of the natives was effected; they were divided into relays and driven to the intolerable toil of the mines, in which it is said that more than eight millions of them perished. This condition continued for about two hundred and forty years. In 1776, Charcas was detached from Peru, and was attached to the viceroyalty of Buenos Aires. The partial exhaustion of the more than fourteen hundred silver mines of Peru and her dependencies, only whetted the lust of the master race. Already the successful rebellion of the North American states, and the progress of the French Revolution, were known in South America, and when the Spanish monarchy tottered, revolts broke out everywhere. As early as 1780, there was an uprising in Charcas. The authorities of Peru and of Buenos Aires came down on the rebels, and they were suppressed. But the rebellion broke out again in 1809, and civil war ensued, with only occasional intermissions, until 1815. The restoration of the Spanish Bourbons discouraged the Charcan patriots, and they remained subject until nearly all the other American dependencies of Spain had become independent. The final struggle extended from 1821 to 1825. In the latter year, Bolivar sent a part of his forces into the country now bearing his name, and the Spanish authorities were utterly swept away. A new republic was instituted, and General Sucre was elected president. He was succeeded, in 1828, by the ambitious Santa Cruz, who effected a confederation of North Peru, South Peru and Bolivia as his own protectorate. Then came a period of confusion and war. The civil republic became military. Almost all the presidents, until 1873, were usurpers supported by an armed faction. In 1879 Bolivia and Peru engaged in a disastrous war with Chile. It lasted over four years. The allies were utterly defeated, and Bolivia was obliged to cede her valuable seacoast to the victor. The Bolivian President Daza was considered responsible for the defeat and was deposed. His successor, President Campero, restored tranquillity and during the remainder of the century the country enjoyed peace.

Government; Defense. The President is chosen by popular vote for four years and is not immediately reëligible. The 16 Senators are chosen for six and the 69 Deputies for four years. The suffrage requires reading and writing as a qualification. Each of the eight departments of the country is administered by a prefect who holds large authority. The standing army consists of about 2,500 men. All males between 18 and 40 years of age being liable to service, it is supposed to number 178,000 on a war footing. There is no navy.

Religion; Education. The state religion is the Roman Catholic, but other faiths are tolerated. Primary education is in theory free and obligatory. Its support is divided between the central and local authorities. There are six universities.

Industry and Labor. The chief mineral product is silver. The total yield of the mines at Potosi, discovered in 1545, is estimated at $3,000,000,000. Tin is next in importance. Some coffee is exported. Germans and English control the import trade.

The area is 605,400 square miles. The population is about 2,000,000.

1538. Hernando Pizarro invades the region, subsequently called Charcas, now Bolivia.
1780. Charcas attempts revolt from Spain.
1825. After a four years' struggle the Spaniards are expelled.
1879. Bolivia and Peru engage in a four years' disastrous war with Chile.
1905. A tariff, almost prohibitive except as regards machinery, adopted.
1909. War with Peru threatens. See Argentina.

BRAZIL.

On the third of May, 1493, Pope Alexander VI. divided the world by a line north and south, 100 leagues west of the Cape Verde Islands. Spain might discover and take all *west* of the dividing line, and Portugal might discover and take all *east* of it. On June 7th of the following year, this sweeping license of the Pope was modified by removing the divisional line to a meridian 370 leagues west of the Cape Verde Islands. In February of 1500, the Spanish adventurer, Vicente Yanez Pinzon, discovered the northeast coast of Brazil. This discovery would have won the country for Spain, but the maritime parts of Brazil lie east of the dividing line referred to, and thus, though Spain had made the discovery, Portugal had the exclusive right. Upon so small a contingency, the development of Portuguese influence in South America was made to turn.

About two months after the discovery made by Pinzon, the Portuguese captain, Cabral, reached the Brazilian coast south of Bahia. He took possession of the country and went on his way to India. No colony was established, however, until 1532. The home kingdom divided the coast into sections, and each section was assigned to some Portuguese nobleman, who was expected to become the proprietary, or patroon, of the colony. These grants became the basis of the Portuguese provinces of after times.

Notwithstanding the rights of Portugal, other European states sought to establish claims in Brazil. Thus did the French and the Dutch — but without success. Bahia was founded by the Portuguese in 1549. A few years afterward, the French obtained a temporary footing at Rio de Janeiro, but they were expelled in 1560. The Dutch colony at Pernambuco held out until 1654. After that date the whole country was essentially Portuguese.

Beginning with the year 1640 and extending to 1762, Brazil was governed by viceroys, who ruled the country from Bahia as the capital. In the last-named year, the seat of government was transferred to Rio. During the seventeenth century, the colonial settlements did not greatly improve, but in the eighteenth there was a remarkable development. Then began the sugar and coffee industry, and then were discovered the rich mines of gold and diamonds. The interior became known, and the enormous resources of Brazil were revealed to Europe.

When, in 1808, Napoleon made his proclamation that the House of Bragança had ceased to reign, the regent Dom John fled to Brazil for refuge. Succeeding to the Portuguese throne, he returned to the home kingdom after the treaty of Vienna, leaving as his representative in Brazil, his son, Dom Pedro. Very soon, the latter, sharing the sentiments of the Brazilians, declared independence of the home government, and in December, 1822, Dom Pedro was proclaimed emperor as Pedro I. of Brazil. For fifteen years, the old Portuguese party kept up a petty warfare. In 1831, the animosity was so consider-

able that Pedro was obliged to abdicate in favor of his son, who held authority under a regency for nine years, but assumed the crown when his majority was reached in 1840. In the following year, he was proclaimed sovereign in his own right. Until 1849, the country was constantly disturbed with insurrections, and then for three years, a great national war was waged with the Argentine Confederation under the leadership of the dictator Rosas. The latter was overthrown in 1852, and a period of prosperity ensued, which was terminated in 1865, by the war of Brazil with Paraguay. This conflict covered a period of six years. The dictator Lopez fought bravely, and though overthrown was able to demand and obtain favorable terms for his countrymen. In the outcome, Brazil and the Argentine Republic broke friendship, and hostilities were threatened between them. Paraguay was enabled to make a separate treaty with Argentina. The Brazilian court meanwhile became a seat of enlightenment. The Emperor was elected a member of the French Academy of Sciences. In 1876, he was a visitor at the American Centennial Exposition. Soon afterwards a steamship line was established between Rio de Janeiro and New York. The development of Brazil was, except during the famine year of 1878, extensive and prosperous until the political clataclysm of 1889, by which the empire was overthrown, the Emperor driven into exile, and a republic instituted under the title of the United States of Brazil. Except for a rebellion in Rio Grande do Sul in 1895 and for a naval revolt of brief duration in 1893–94, the country has enjoyed tranquillity and has prospered under republican rule.

Government. The new constitution, modeled in almost every part after that of the United States of America, was adopted by the Brazilian Congress in 1891. The presidential term is four years, with noneligibility to reëlection. The president and the vice president are elected by popular vote. The legislative power is lodged in a Congress, consisting of a Senate and a Chamber of Deputies. The Senatorial body is composed of 63 members, elected by a direct vote of the people in the respective States. The term of service is nine years. The Chamber of Deputies consists of 212 members, elected for a three years' term by direct popular vote. The basis for representation is one member for every 70,000 of the population. The president is assisted in the administration by the six secretaries: of Finance; Justice, Interior and Public Instruction; War; Marine; Foreign Affairs; Industry, Communication and Public Works. Brazil is divided into twenty districts or states (beside the federal district, which is the seat of government), in analogy with those of the States of the American Union.

Industry and Labor. The greater portion of this vast country is agricultural, but only a small part has been brought under cultivation. The products in order of their importance, are coffee, sugar, tobacco, cotton, tea, india rubber, timber, cocoa, and nuts. Beside the products here enumerated, the cattle industry is of great importance. Fruit raising has recently attracted attention. The mineral resources of the country are vast and undeveloped. They include almost all the precious and common metals, together with coal and building stone. The industrial peculiarity of Brazil rests upon the disproportioned power of man and nature. The tremendous forests and deep rolling rivers have kept at bay the adventure of mankind, and have appalled the human faculties. As a result, enterprise has fallen back upon the native resources of a few open and favored districts. The tropical climate, while it has intensified vegetation, has enervated man.

Religion. Until the downfall of the empire, the established religion was Roman Catholic. On the institution of the republic, the principle of absolute equality among all forms of religious faith was adopted. It was agreed, however, that the Catholic clergy then in office should continue to receive their salaries out of the federal treasury. The Roman Catholic hierarchy of Brazil is headed by the metropolitan archbishop of Bahia.

Education. The higher education in Brazil is under the patronage and control of the general government. The system includes a university, two medical schools, four law schools, four military schools, one naval school, one school of mines, and one polytechnic institute. The secondary education is for the most part under the control of the several States; it includes seminaries, academies, gymnasia, and schools. Primary education is provided for by the several States, the system being free but not compulsory.

Defense. The law declares military service compulsory, but it is not enforced. Nominally there are 28,000 men in the army; actually about 15,000. The navy in 1900 consisted of 3 battleships of small size, 2 protected cruisers and some miscellaneous craft. Two battleships of 13,000 tons each were added in 1907, and substantial additions are under contemplation.

The area is 3,218,991 square miles. The population at last census was 17,371,069.

1500. The Brazilian coast is **discovered** by Vicente Yanez Pinzon, a companion of Columbus. In April, a fleet under Pedro Alvarez Cabral touches Brazil south of Bahia, and the country is claimed in the name of **Portugal.**

1532. A colony is planted at São Vicente, by Martin Affonso de Souza. The country is apportioned to Portuguese noblemen as the foundation of **hereditary principalities.**

1549. Bahia is founded and becomes the capital of the Portuguese possessions in South America.

1555. A French colony is established at Rio de Janeiro; it is abandoned after five years.

1612. Another settlement is made by the French at Maranhão, which endures for two years.

1624. The Dutch seize Bahia, but are obliged to surrender their conquest in the following year.

1631. Pernambuco is taken by the Dutch, who establish a powerful colony around the original settlement.

1640. Brazil is placed under the rule of a **viceroy,** the first attempt on the part of Portugal to establish government in her American colonies.

1645. The Dutch are finally driven out of Brazil by the Portuguese.

1762. The capital of Brazil is removed from Bahia to Rio de Janeiro.

1762–1800. During this period, the **development** of the colonies is **rapid;** the sugar industry greatly increases in importance; rich discoveries of gold and diamond mines are made; the interior is explored, and towns are founded inland, at Goyaz, Matto Grosso, and at the headwaters of the Madeira.

1808. On the invasion of the home kingdom by the armies of Napoleon, **Dom John,** prince regent of Portugal, takes refuge in Brazil; he makes Rio de Janeiro the seat of his government.

1816. Dom John succeeds to the Portuguese throne, in March.

1821. In April, Dom John returns to Portugal; he leaves his son, Dom Pedro, as regent in Brazil. Uruguay becomes a part of Brazil under the name of the Cis-Platine state. This relation is maintained until 1825.

1822. On September 7, **Brazil is declared an independent empire;** obedience to Portugal is definitely renounced. The prince, Dom Pedro, places himself at the head of the movement for independence; December 1, he is crowned as **Emperor Pedro I.** of Brazil.

1831. For political reasons, Pedro I. **abdicates the throne** in favor of his son, **Pedro II.,** who is a minor; the country is ruled by a regency *ad interim.*

1840. Pedro II. upon reaching his majority assumes the crown.

1852. The dictator **Rosas** of Buenos Aires attempts to annex Uruguay; Brazil makes war upon him, defeats the project, and Uruguay remains independent.

1865–69. A war with Paraguay ensues, which ends with the defeat and death of the instigator, the dictator **Francisco Solano Lopez of Paraguay.**

1871. A law for the gradual emancipation of the slaves is passed, but the final extinction of servitude is due to a popular movement against it. 200,000 slaves are freed by private agencies, and the institution of slavery is extinguished in two provinces before the general abolition is effected.

1888. On May 13, **the abolition of slavery is decreed** by an almost unanimous vote of the Brazilian Parliament.

1889. A sudden revolution breaking out, the **Emperor Pedro II.** is forced to **abdicate;** the empire is succeeded by a provisional government under General Fonseca.

1891. A Federal Constitution is adopted on February 24; Fonseca becomes the first president of the republic. He is deposed in November, and the office is seized by Floriana Peixoto.

The deposed emperor Dom Pedro dies.

1893. Several States of the union in concert with the navy **rebel against** the administration of **President Peixoto.**

1894. The rebellion is finally quelled in March; with the cessation of hostilities Prudente Moraes is elected president.

1895. A revolt against the administration of the Governor of Rio Grande leads to a war, which is ended by a compromise with the belligerents. The question of **the disputed boundary line** between Brazil and the Argentine Republic is referred to the President of the United States for arbitration; he makes the award, on February 6th, **in favor of Brazil.** A British cruiser takes possession of the island of Trinidad; the action of Great Britain raises a protest from Brazil. The adjustment of claims brought by foreign governments against Brazil for damages on account of losses sustained by their citizens during the late revolution becomes a serious matter of consideration.

1896. Anti-Italian riots are frequent, arising from the excessive claims of Italy for indemnity; the threatening difficulty is obviated by arbitration. The **occupation of the island of Trinidad** by the British ceases on August 25; the dispute is settled by the mediation of Portugal; Senhor Soveral, the Portuguese foreign minister, proclaims Trinidad to be a Brazilian possession.

1898. Campos Salles is elected president, March 1.

Trade with the United States of America, almost stationary since 1892, rises in 1896 to $71,060,040, exports, and $41,298,187, imports.

1900. December 1, the Swiss government, as arbitrator, decides that the **boundary of French Guiana,** in dispute for 300 years, shall be the Oyapok River and Tumuc Humac Mountains. This gives Brazil 147,000 square miles of the disputed territory and France 3,000.

1902. Rodrigues Alves is inaugurated president, November 15.

1903. On March 22 is signed a preliminary agreement with Bolivia, respecting the **Acre boundary** question. It gives Brazil the territory east of Yacu River; Bolivia is to hold the territory south of 10° 20′.

1904. May 6, Brazil demands that Peru withdraw her troops from territory in dispute between them. Peru agrees to leave the territory pending a settlement, and later Brazil does the same.

November 16, state of siege because of antivaccination riots is proclaimed at Rio de Janeiro.

1906. January 22, explosion sinks the cruiser *Aquidaban,* and 223 are killed.

July 23, **Pan-American Congress** meets at Rio de Janeiro.

July 31, Secretary of State Root makes noteworthy address to Pan-American Congress, expressing the United States' friendly sentiments towards South America and explaining its position.

1908. January 13, the government reduces the duty on several American articles of import in honor of the visit of the American battleship fleet.

January 22, Brazilian warships escort the battleship fleet on its departure from Rio de Janeiro.

October 2, Arbitration and other **treaties** are signed **with Argentina.**

BULGARIA.

Bulgaria is one of the younger free states of Europe, independence having been proclaimed by the Bulgarian Assembly, and the prince of Bulgaria having declared himself czar of the Bulgarians at the ancient capital, Tirnova, on October 5, 1908.

The country lies directly south of the Danube. Formerly a kingdom of varying size and strength and at times the dreaded antagonist of the Byzantine Empire, it was overthrown by the Ottoman Turks in 1394. An attempt at insurrection in 1876 was repressed by the Turks with atrocities known as "the Bulgarian massacres," which brought about the intervention of Russia in the war of 1877–78. The treaty of Berlin in 1878 divided Bulgaria into two parts. The northern and larger part was erected, as the principality of Bulgaria, into an "autonomous and tributary principality under the Sultan of Turkey." The southern and smaller part, to be called Eastern Roumelia, was to remain under the Sultan's direct authority and be ruled by a governor-general whom the Sultan should appoint. A revolution in 1885 reunited Bulgaria and Eastern Roumelia. The dominant aspiration of the Bulgarians has been for entire political independence, now achieved.

Government. The constitution was formed in 1879 and amended in 1893. Legislative authority is vested in the Sobranje or National Assembly. Every district of 20,000 inhabitants is entitled to one Deputy. He is elected for five years by universal manhood suffrage. A Grand Sobranje, chosen in the same manner as the ordinary Sobranje but with twice the number of members, must be summoned in special circumstances. The executive function is exercised by a council of the eight ministers, named by the czar, of Foreign Affairs and Public Worship; Interior; Public Instruction; Finance; Justice; War; Commerce and Agriculture; and Public Works, Ways and Communications. For local administrative purposes the country is divided into 12 districts or prefectures.

Industry and Labor. According to theory the state owns all the land, which it lets by perpetual and hereditary lease. Agriculture engages three fourths of the people, nearly all of whom hold a few acres. The chief productions are wheat, wine and tobacco. The finest attar of roses is manufactured. Great numbers of live stock are reared and exported. The country possesses much mineral wealth, coal, iron, gold, silver, lead and copper, and has large salt works.

Religion. The state religion is that of the Eastern Orthodox Church, though the clergy of all communions are supported by the state. At present the Bulgarian Church is, from technicalities, not recognized in the Orthodox communion. The Church is presided over by the Exarch assisted by the Holy Synod, and more than five sixths of the people are communicants.

Education. The Bulgarians devote great attention to education. In 1906 there were in the kingdom 4,584 elementary, 190 middle-class, 85 technical and special, and 85 other schools, together with 16 gymnasia, and a university at Sofia. Altogether 442,210 pupils were receiving instruction.

Defense. The army, numbering on a peace footing 52,500 men, can be raised in time of war to 375,000. This force is well equipped and thoroughly trained. Every Bulgarian is liable to service from his nineteenth to his forty-seventh year.

The area is 38,080 square miles. The population in 1906 was 4,035,623.

1909. An agreement between Bulgaria and Turkey is signed, April 19, at Constantinople by which Turkey recognizes the independence of Bulgaria and the latter agrees to pay about $17,000,000 indemnity. On the same day an agreement between Russia and Bulgaria recognizing the latter's independence is signed at St. Petersburg.

CENTRAL AMERICAN STATES.

Costa Rica, Guatemala, Honduras, Nicaragua and Salvador are free and independent states. In the family of nations each counts one. But they are so intimately associated with one another and so comparatively dissociated from the rest of the world that it is more convenient to discuss them in sequence as members of a group. Despite the individuality of each, their nearness to one another and their situation in the tropics have given them many features in common. There, Nature is prodigal in her products, hunger is easily satisfied, life is out of doors, human abodes are low and of unstable character, and the sting of sleet and snow, driving the faculties into quick and powerful exertion, is unknown.

COSTA RICA.

On his third voyage to the new world, Columbus traced the Costa Rican coast for a considerable distance. His fourth and last voyage brought him again to this beautiful shore, and soon afterwards Spanish adventurers established themselves in this region. In doing so, they planted their institutions on those of a civilized race of natives who preceded them. Indeed, the Mayas, whose tribes occupied the country, were among the most advanced of all the aboriginal peoples of America. The architectural ruins which they left behind confirm our high estimate of their great abilities. Their ceramic art may well be compared for excellence with that of the Greeks.

Spanish colonies were established in Costa Rica in the first quarter of the sixteenth century. They expanded and flourished for a season, then became stationary, and then, under the malign influence of the Spanish home government, began to decline. In this period, the natives were subdued and their usages virtually extinguished. There was some amalgamation of the conquering and subject peoples, but the Spanish element soon predominated. At the present day, Spaniards of pure descent may be recognized in the towns and cities, while the mixed race is in the interior.

In the early part of the nineteenth century, the revolutionary spirit prevalent in Mexico and in the Spanish states of South America extended into Central America. When, in 1821, the states comprising the kingdom of Guatemala declared their independence, two parties contended for the ascendency; the one preferred a union with Mexico, then under the direction of the revolutionist, Iturbide; the other was desirous of complete independence and the establishment of a separate republic.

The people of Costa Rica divided on the question. The city of Cartago sought a union with Mexico, but San José struggled for complete independence. The issue was decided in favor of the independent republicans, who won the battle of Lake Ochomogo and transferred the capital to their favorite city of San José. Thus was instituted the republic of Costa Rica.

For fifteen years (1824–39) the province was an under state in the Central American confederation, but at the close of that period actual independence was achieved. The geographical situation of Costa Rica removes it to some degree from the disturbing influence of the other Central American States. But it has been tormented by revolutions and civil wars inside its own borders.

Government. It is governed under a constitution promulgated in 1870, superseded by dictatorships from 1870 to 1882, and often amended since. The president and a House of Representatives are chosen for four years by electoral assemblies. Those assemblies are elected by popular vote of such citizens as are self-supporting.

Industry and Labor. Coffee and bananas are the chief product. Cocoa and tortoise shell, mother-of-pearl, cedar and mahogany also are exported. The gold mines are worked by Americans. Immigration is encouraged.

Religion. The constitution insures entire religious liberty. Roman Catholicism is the state religion.

Education. The state fosters education. There were in 1905 elementary schools numbering 386, a lyceum for boys, a college for girls, three men's colleges, and schools of medicine, law, pharmacy and dentistry.

Defense. The standing army contains 1,000 men, the militia 5,000, and every male between 18 and 50 years of age is liable to serve. The navy consists of one gunboat, and one torpedo boat.

The area is 18,400 square miles. The population in 1906 was 345,090.

Chronological Annals follow Salvador.

GUATEMALA.

The Spanish captaincy general of **Guatemala** formerly comprised fifteen provinces, the names of several of which are still preserved as the titles of the Central American republics. All of Central America and part of Mexico were originally included in the single government of Guatemala. In course of time, the provinces revolted and became independent. Old Guatemala was thus reduced to the present republic of that name. As early as 1524, Guatemala was entered from Mexico by a force of Spaniards under Alvarado. The native races were overcome, and the Quiches were reduced to servitude. During the seventeenth and eighteenth centuries civil organization was effected in the different provinces, some of which flourished and others decayed.

In the first quarter of the nineteenth century, Guatemala shared the revolutionary sentiment which spread through all the American provinces of Spain. In 1820, an insurrection broke out, and in the following year, independence of the Spanish sovereignty was declared. The Mexican insurgent leader, General Iturbide, was actively supported, and Guatemala joined his empire; but it shared the ensuing vicissitudes, and, when Iturbide's fortunes waned, Guatemala became independent. A democratic constitution was adopted in 1824, the first in the world to abolish slavery and to declare the slave trade piracy. All of Central America became a confederation under a single presidency.

In 1827, the assassination of Vice President Flores of Salvador led to a revolt of that province, and to a war which lasted two years. General Morazan, a Salvadorian, was then elected president. A disturbed and revolutionary condition ensued, lasting till 1851, when the Salvadorian ascendency was broken by President Carrera, who three years afterward was made president for life.

The struggle between Guatemala and Salvador broke out anew when Barrios was president of the latter country in 1863. The army of Guatemala was defeated. The war became general. Honduras made an alliance with Salvador; Nicaragua and Costa Rica joined Guatemala. President Carrera was successful. In 1865, he was succeeded by General Cerna. The latter in 1871 was deposed by the Liberal party, which had sprung up in the country under the leadership of General Granados. The conservatives in league with the clerical party were suppressed, and the Jesuits, with the archbishop of Guatemala at their head, were expelled from the country. General Barrios was elected to the presidency, and a new secular and progressive policy was adopted. Guatemala is the most populous of the Central American States.

Government. The constitution, dating from 1879, has been several times modified, last in 1903. There is a National Assembly, one member for every 20,000 inhabitants, elected by universal manhood suffrage for four years; and a Council of State of 13 members, partly appointed by the president and partly elected by the Assembly. The president is elected for six years.

Industry and Labor. Coffee is the most important product. The coffee plantations are owned by Germans. Tobacco, sugar, bananas, timber and rubber are exported. The metals abound.

Religion. Most of the people are Roman Catholics, but religious liberty prevails. There is no state religion. The bishops of Costa Rica, Honduras, Nicaragua and San Salvador are suffragans of the archbishop of Guatemala.

Education. Education is obligatory and free. In 1903 there were 1,064 elementary schools, and also secondary, normal, professional and special institutions. The German government maintains a German school.

Defense. There is a standing army of about 7,000 men. In the so-called effective army are 56,900 men from 18 to 30 years of age and in the reserve 30,000 from 30 to 50 years of age.

The area is 48,290 square miles. The population in 1903 was 1,842,134.

Chronological Annals follow Salvador.

HONDURAS.

The country called Honduras was formerly a province in the kingdom of Guatemala. Here it was that Columbus, on the 14th of August, 1502, first landed on the mainland of Central America. Into this region, Cortes, after he had conquered Mexico, turned his invading march. It was two years after leaving the Mexican capital before he was able to reach the coast which Columbus had explored. In 1525, Truxillo was founded. Ten years afterwards, the interior of Honduras was overrun by the Spaniards. Tradition records that they slaughtered in this campaign fully one hundred thousand Indians. The conquerors established settlements, and in several places flourishing cities were built up by the middle of the sixteenth century. In the following one hundred and fifty years, Honduras remained a part of the viceregal government of Central America, sharing in that relation the apathy and decline which prevailed throughout the whole of the Spanish dominion. In 1821, the province broke into revolt, and joining the movement of the times, declared independence. Two years afterwards, the state became a member of the Central American Union. That union survived for sixteen years, but was broken up in 1839, and Honduras, like the other provinces, achieved independence. The Liberal party made efforts to restore the federal union, and in particular to secure a league with Salvador and Nicaragua. In these times, hostilities prevailed even to civil wars throughout the greater part of Central America. Honduras made war with Guatemala. In 1855, the army of the former was defeated; the president, Cabaños, was driven into exile, and his successor made a treaty of peace. In 1862, President Guardiola, attempting to quell a revolt of the soldiers, was slain. Three years afterwards, a new constitution was adopted by which the presidential term was limited, and other provisions made by which the general condition of the country was improved. By the convention of Washington in 1907, the territory of Honduras was neutralized and a High Court was established there to which it was agreed all future Central American disputes shall be submitted.

Government. It is a republic under the charter of 1894. There are a president and a Congress of Deputies, both elected by popular vote for four years.

Industry and Labor. The chief product is the banana. Coconuts, rubber, coffee, tobacco, oranges, lemons, sugar and maize are grown. Cattle are raised and exported.

Religion. All creeds are free, there is no state Church, but Roman Catholicism is the prevailing religion.

Education. Eight hundred and fifty-one schools give primary instruction. There is a Central Institute at Tegucigalpa.

Defense. The neutralization of the state removes the need of a standing army.

The area is 46,250 square miles. The population in 1905 was 500,136.

Chronological Annals follow Salvador.

NICARAGUA.

When the captaincy general of Guatemala was broken up by the revolt from Spain, in 1821, the province of Nicaragua became a state in the new government. Hitherto, the country had shared the common destiny of all the Central American States. Columbus had seen this coast in 1502. Twenty years afterwards, Nicaragua was explored by Davila. Granada was founded as early as 1524. The Spaniards easily subdued and then exterminated the native race. For nearly two centuries the province comprised a district of Central America inclusive of the present Mexican state of Chiapas. The early administration of the Spanish governors was one of excessive cruelty. Boyle declares that the first two of these were murderers, that the third killed the second, that the fourth was a forger, and the fifth a rebel and homicide. In 1610, the town of Leon was founded. In 1685, the place was sacked by the Dutch under the leadership of Dampier. During the whole of the eighteenth century, the history of the province is of little consequence.

Not until the revolt of 1821, in which all the states of Central America participated, did Nicaragua emerge into importance. When, two years afterward, the five central states united in a federal union, Nicaragua joined the league. This combination endured for ten years, but there was no year of peace. Nicaragua attempted to secede, and then made war on Costa Rica. Civil strife broke out between the rival cities of Granada and Leon. While the federal union existed (such was the universal broil) three hundred and ninety-six men claimed and held the presidency — an average of nearly forty presidents to the year!

Meanwhile, an Aristocratic party established itself in Granada, while the Democratic party had its headquarters in Leon. It was to aid the latter against the former that the filibuster, William Walker, invaded the country in 1856, only to be expelled by the combination against him. Gathering other forces, he returned after the adoption of a new constitution, in 1858, but was captured and shot at Truxillo in September, 1860. At this time, the presidency was held by Martinez, whose ability and energy brought a period of peace to the republic. Meanwhile, in 1857, the capital was removed from Granada to Managua. In 1893, another political civil war broke out, in which President Sacaza was deposed from office, and General Zelaya elected in his stead. He was feared by the other states as aiming at their forcible union.

Government. The president is appointed for six years. There is a Congress of 36 members elected by universal suffrage for six years. The constitution was proclaimed on March 30, 1905.

Industry and Labor. Agriculture is the chief industry and is progressing. Over 18,000,000 pounds of coffee were exported in 1903. Immense quantities of bananas are shipped to New Orleans. Cocoa and sugar are raised. The sale of spirits is a monopoly of the government, which also regulates the raising of tobacco.

Religion. Almost all the people are Roman Catholics.

Education. According to government reports there are 323 elementary schools, ten colleges and two universities.

Defense. The army consists of 4,000 men, which number may be raised to 40,000 in need.

The area is 49,200 square miles. Hence Nicaragua is the largest of the Central American States. The incomplete census of 1906 puts the number of the inhabitants at 600,000.

Chronological Annals follow Salvador.

SALVADOR.

Stretching along the Pacific coast from Guatemala to the Gulf of Fonseca lies the little republic of **Salvador.** This is the ancient Cuscutlan, which was conquered by Pedro de Alvarado in 1524. The modern state is the smallest and at the same time the most densely populated of the Central American divisions. It is also the most recent of the group. During the whole colonial period the country was included in the captaincy general of Guatemala. When in 1821, by the general revolt from Spain, Guatemala was disrupted, Salvador appeared as one of the provinces, and as such three years later became a member of the Central American confederation. This relation was held, though not without revolutions and wars, from 1824 to 1839. Three years afterward (1842) the independence of Salvador was recognized both by the other republics and by Spain.

The revolutionary tendency prevalent in all the Spanish American states has shown itself in Salvador. From the first there has been a party favoring a general republic or Central American Union in the likeness of the United States of North America. The other party has favored local independence. Sometimes the one and sometimes the other has been in the ascendant. In 1858 General Gerardo Barrios obliged President Del Castillo to abdicate his office, himself seizing the presidency, which he could not hold against the Guatemalans, who at length overpowered him and put him to death, August 29, 1865. The subsequent history of the country has been hardly less turbulent.

Government. A republic, under the constitution of 1824, which has been often modified since. The president is elected for four years. A Congress of 70 members is annually chosen by popular vote.

Industry and Labor. The occupation is mainly agricultural. Coffee, sugar, indigo, and balsam are exported. There are gold, silver, copper and iron mines.

Religion. The religion is Roman Catholic.

Education. Education is compulsory and free. There are schools for jurisprudence, medicine, and dentistry, normal, technical, and about 600 primary schools.

Defense. The standing army of nominally 3,000 men it is claimed can be raised to seven times as many in war.

The area is 7,225 square miles. The population was 1,006,848 in 1901.

ANNALS OF THE CENTRAL AMERICAN STATES.

1502. During his fourth voyage, **Columbus** traces for a considerable distance the coast of Central America, noting the shore of Nicaragua and landing on the mainland in Honduras, August 14.

1520. A proposal is made by Angel Saavedra to pierce the Isthmus of Darien with a **canal** uniting the Atlantic and the Pacific. Hernando Cortes causes the Isthmus of Tehuantepec to be surveyed for the construction of a canal.

1521. Cortes undertakes an expedition into Honduras.

1523. Gil Gonzalez Davila explores Nicaragua; he reaches the lake region from the Pacific side and finds a **civilized Indian population.**

1524. The Spaniards enter Guatemala. Granada and other towns are founded by Francisco Hernandez de Córdoba; Nicaragua becomes a province of Guatemala.

1528. The territory of Salvador is invaded, and the natives conquered, by Jorge de Alvarado.

1550. The Spanish authorities again agitate the question of a canal from the Atlantic to the Pacific. Four different routes are proposed, one of which is across the Isthmus of Panama.

During the remainder of the sixteenth century and the whole of the two centuries following the principal Spanish colonies of Central America, under the name of Guatemala, are governed as a captaincy general under the Spanish crown. Until after the reign of Philip II., the country is in a **flourishing condition** of development. In this period, nearly all the **native races** are either **exterminated** or reduced to an abject condition and forced back into the interior.

1810. The shock received by the Spanish monarchy extends to all the dependencies of the kingdom in America and nearly all become **revolutionary.** The states included hitherto under the authority of Guatemala begin to be disrupted.

1814. The Spanish Cortes, after the capture of Paris, give attention to New Spain; that body orders the viceroy to undertake the construction of a canal across the Isthmus of Tehuantepec, but the war of independence breaks out in the Spanish American states, and the project is abandoned.

1820. **A rebellion** begins in Guatemala against the rule of Spain, and a declaration of independence is made in the following year.

1821. Costa Rica is proclaimed independent of Guatemala.

1822. Guatemala adds her support to the forces of General Iturbide, the Mexican revolutionist.

1824. **A confederation** of the Central American States, including Guatemala, Honduras, Nicaragua, Costa Rica, and Salvador, is effected. Slavery is abolished, and a democratic constitution is established. The union is maintained for fifteen years.

1827. Vice President Flores is assassinated, and the state of Salvador rises in rebellion; a war for and against the union ensues.

1829. The forces of Salvador capture the city of Guatemala and establish General Morazan in the presidency.

1839. The Central American **confederation is dissolved.** Honduras attempts to create a new federal union with Nicaragua and Salvador. Guatemala endeavors to uphold the existing order; war ensues, and the states become independent.

1849. On the discovery of gold in California, an American company undertakes the construction of a **railway across the isthmus;** the enterprise is successful and the road is open to traffic, January, 1855.

1851. The combined army of Honduras and Salvador is defeated at La Arada by General Carrera, the Guatemalan commander. By this battle Guatemala recovers her independence, and Carrera is made president. Three years afterwards, he is chosen president for life.

1855. President Cabaños of Honduras is defeated and exiled. His successor, General Guardiola, concludes a treaty of peace with Guatemala.

1856. Nicaragua is invaded by General **William Walker,** an American filibuster and adventurer, who is at first successful; in the following year, he is expelled from the country by the efforts of the Central American republics in support of the patriot party in Nicaragua. Managua becomes the capital of the republic.

1858. **A new constitution** is adopted in **Nicaragua,** and Tomás Martinez is elected president.

1860. The filibuster Walker is forced to surrender; he is given up to the authorities of Honduras and is shot, September 12.

1862. The army of Honduras mutinies, and President Guardiola is killed.

1863. A war breaks out between Guatemala and Salvador; Honduras espouses the cause of the latter, and Nicaragua and Costa Rica support Guatemala. The last-named state brings the conflict to a successful conclusion.

1865. In November, the republic of **Honduras** adopts a **new constitution,** fixing the presidential term at four years.

President Carrera of Guatemala dies; General Cerna succeeds him.

1871. The Liberal party in Guatemala rises to power, and President Cerna is deposed by General Granados; the Jesuits are driven into exile and the property of the order is confiscated.

1873. General Rufino Barrios is elected to the presidency of Guatemala; all the cities except those on the interior frontier are opened to foreign commerce; an alliance, offensive, is made with Salvador.

1886. General Barillas is elected president of Guatemala.

1889. Some preliminary work undertaken in constructing an inter-Oceanic canal across Nicaragua.

1893. Nicaragua is convulsed with a civil war; President Sacaza is deposed and General José Santos Zelaya is elected in his stead. A financial crisis causes suspension of work on the Nicaragua canal.

1894. **A new constitution** is adopted in Nicaragua. **Bluefields,** the settlement of the Mosquito Indians, is invaded by the Nicaraguans. British and American forces are sent for the protection of the citizens of the two nations respectively. The Indians, already nearly extinct, are suppressed, some being sent to a reservation in Nicaragua.

1895. The government of the United States intervenes to settle a **boundary dispute between Guatemala and Mexico;** the controversy is decided in favor of Guatemala, with an indemnity to Mexico. A treaty, offensive and defensive, is made between Honduras and Nicaragua. A *projet* of permanent peace for Central America is signed by Honduras, Nicaragua, and Salvador; a central government is provided for, and the states thus combined are to be known as the Greater Republic of Central America. A British fleet occupies Corinto to enforce the claim of Great Britain for damages during the Mosquito war; Nicaragua, induced by the United States, agrees to pay

the indemnity. **The Nicaragua Canal project is revived,** and an American commission is authorized to survey a route and estimate the cost of the work. Salvador is disturbed by a counter-revolution consequent upon the presidential election; in September, the revolt is suppressed.

1897. Hostilities break out between Nicaragua and Costa Rica; the latter country is invaded by an army under President Zelaya.
In September, a formidable insurrection breaks out in Guatemala against President Barrios, which he summarily suppresses.

1898. President Ruña Barrios is assassinated Feb. 8 in revenge for a political execution. Vice President Manuel Estrada Cobrera succeeds him. Delegates from the Central American States meet in Managua, in June, to form a constitution for the Greater Republic of Central America.

1902. In February, the five states sign an arbitration treaty.
May 8, Don Ascencion Esquivel is inaugurated president of Costa Rica.
April 18, an **earthquake kills 1,400** persons in Quezaltenango, Guatemala.

1903. May 17, Manuel Bonilla, elected president in 1902, defeats former president Sierra at Tegucigalpa, and becomes president of Honduras.

1904. April 22, an ex-president and six members of the Chamber of Deputies are found guilty of an attempt to murder President Bonilla.
During the year the Presidents of Honduras, Nicaragua and Salvador sign agreement to maintain peace in Central America.

1906. May 27, revolution breaks out in Guatemala which on July 11 declares war against Salvador. July 19, through efforts of Mexico and the United States, envoys of Guatemala, Salvador and of Honduras, which had become involved, meet on U. S. cruiser *Marblehead*, and the next day sign tripartite treaty of peace.

1907. In January, fighting on the frontier occurs between Honduran and Nicaraguan troops. March 25, **Tegucigalpa,** capital of Honduras, **is captured** by a Nicaraguan army. April 12, President Bonilla of Honduras surrenders to Nicaraguan forces.
September 17, plenipotentiaries of the five states sign at Washington a protocol, in pursuance of which on November 14 delegates of these nations meet in Washington and, December 20, sign a treaty of amity and seven conventions. **A Central American Court of Justice** is established, Honduras is neutralized, commercial uniformity is to be secured, and other provisions tending to permanent peace are included.

1908. January 19, the Atlantic and Pacific railroad is opened at the city of Guatemala.
April 21, revolution breaks out in Guatemala and martial law is proclaimed.
May 26, at Cartago, Costa Rica, the **Central American International Court of Justice** is opened.
July 8, revolution in Honduras. Nicaraguan troops are sent to aid of Honduran government.
July 11, Honduras and Nicaragua bring suit for damages against Salvador and Guatemala before the Central American Court.
December 1, attempt at revolution in Salvador is quickly suppressed.

1909. During the early autumn a revolution against President Zelaya of Nicaragua is started under General Estrada. On December 16 Zelaya resigns and Madriz is elected to succeed him. The revolution continues.

CHILE.

Chile presents a striking appearance upon the map, having a length along the Pacific of nearly 39 degrees of latitude or 2,700 miles while its breadth is nowhere greater than 250 miles and averages only 100 miles. It includes the western coast of Patagonia and Cape Horn, the extreme point of South America. When the country was made known to Europe by the Spanish conquistadors, its northern part was included in the empire of the Incas. When that empire was overthrown, the Spaniards under Diego de Almagro (1535) and Valdivia (1541) invaded Chile, and by the middle of the century completed the subjugation as far south as the territory of the Araucanians. The latter held out for one hundred and eighty years, and then accepted the Biobio river as their northern boundary.

During this period, the inhabitants of northern Chile — this country being a dependency of the viceregal state of Peru — were reduced to the most abject condition. The thirteen provinces were under the domination of a governor appointed by the Peruvian viceroy; no check was placed on the rapacity of either. Nevertheless, the spirit of the mountaineers was not broken; and when the Spanish monarchy was overthrown by Napoleon, the Chileans were among the first to revolt. The government, however, was not easily removed; indeed the patriot rebels were defeated after a three years' contest, and the Spanish tyranny was reëstablished. From 1813 to 1816, the old order prevailed; but the patriots rallied from the side of Buenos Aires and received assistance from the successful republicans of that country, who, under the leadership of General San Martin, crossed the Andes in 1817, and won a decisive victory over the loyalists at Chacabuco. This assured the independence of Chile, which was proclaimed on New Year's Day, 1818. For eight years afterward, however, the Spaniards occupied certain strongholds from which they were with difficulty expelled.

After the revolution, the new national government was organized ad interim under the directorship of General O'Higgins. He was succeeded by a triumvirate, but there was political chaos in the country, and a dictatorship resulted until 1828. In that year the new constitution, which had been prepared four years previously, was proclaimed by General Pinto. The country was quiet during one administration, but it was found necessary in 1831 to revise the constitution, and a modified instrument was adopted. Other amendments were made in 1833, and thus the existing constitution of Chile was produced.

General Joaquin Prieto, who was elected president in 1831, held the office until 1841, when he was succeeded by General Bulnes, who also remained in authority for two five-year terms. In 1851, a revolutionary disturbance occurred, resulting in the election of Don Manuel Montt, who had been Secretary of State under Prieto. He, too, was honored with reëlection; and under his administration, Chile made rapid progress in industrial and commercial enterprise. Then came the administrations of Errázuriz and of Anibal Pinto. The antagonism between the wealthy mine owners and landed proprietors, who inherited old Spanish ideas, and the greater part of the people caused many disturbances and severely tried the government.

In 1865, an alliance was made by Chile and Peru in a war with Spain. The conflict lasted four years, when, through the intervention of the United States, the combatants were reconciled. Ten years afterward (1879) war broke out, Chile on one side and Peru and Bolivia on the other. Chile completely defeated the allies, and they, to obtain peace, were obliged to cede to Chile the rich nitrate lands along the coast.

In 1885 José Manuel Balmaceda was elected president by an overwhelming majority. He was a fiery orator and leader of the Liberal party. Soon a strong reaction among the people and the legislative body set in against him, which the President took despotic measures to counteract. The Senate and House of Deputies declared him no longer president. Balmaceda abolished the laws of the country, declared himself dictator and proclaimed martial law. Civil war broke out. The dictator's forces were utterly defeated and he himself committed suicide.

Unfortunately out of this situation of affairs arose in 1891 difficulties between Chile and the United States. The Chileans had accused the American representatives, resident at Santiago, of favoring Balmaceda. The steamship, *Itata*, dispatched by the Congressional or anti-Balmaceda party to San Diego, California, for arms, was detained at that port by orders of the American government. The *Itata* managed to escape from the harbor at night, was pursued but could not be overtaken. The Chileans agreed to give up the vessel to the United States, but, while negotiations for its surrender were pending, a party of American sailors went ashore at Valparaiso. They were attacked by a mob, many were wounded, and one was killed. The intelligence of this deplorable affair produced great excitement in the United States and preparations were made for war. Correspondence between the two governments ended with a demand on the part of the United States for reparation and apology. The Chilean government yielded and the impending conflict was averted. Since then, as always before, the relations between Chile and the United States have been most amicable. The strained relations between Chile and Argentina were terminated in 1902 by a treaty providing for arbitration of disputed questions. Since the overthrow of Balmaceda the internal political condition has been peaceful, and the country has been prosperous except as affected by the terrible earthquake of 1906. That catastrophe caused the loss of over 2,000 lives and destroyed property to the amount of $150,000,000.

Government. The president is elected for five years; he is chosen by a delegate body elected for that purpose, and is ineligible for immediate reëlection; he has a veto on acts of Congress, which a two-thirds vote may overrule. He has a cabinet of six ministers. The 94 Deputies are chosen for three years, on the basis of one to 30,000 inhabitants; and the 32 Senators for six years. The suffrage is limited by a test in reading and writing.

Religion; Education. The state religion is Roman Catholicism, while by the constitution all religions are guaranteed free exercise. The head of the church is the Archbishop of Santiago, and there are three bishops and two vicars apostolic. The state provides for education, but does not render it obligatory. For higher education there are two universities and the National Institute of Santiago. There are a number of professional, technical, and special institutions and 2,620 elementary schools.

Industry and Labor. About half the population are engaged in agriculture. Wheat and other cereals are produced in considerable quantities, as well as wine and fruits; cattle and sheep are numerous. There are some manufacturing industries, especially in the department of Valparaiso. Of the foreign trade, about one half is with Great Britain and one fourth with Germany. Nitrate and ores constitute more than seven eighths of the exports.

Defense. All able-bodied citizens are liable to serve from the eighteenth to the forty-fifth year. The permanent staff consists of 5,606 officers and men, and 6,160 are recruited annually. The navy, once relatively good, is becoming obsolete as hardly any vessels have been added in ten years.

The area is 307,620 square miles and the population in 1905 was 3,399,928.

1535. The region now Chile is invaded by Diegro de Almagro.
1541. Chile is invaded by Valdivia. Resistance continues nine years.
1810. The Chileans make unsuccessful rebellion against Spain.
1818. January 1, Chile formally declares its independence.
1824. A constitution is proclaimed.
1844. Spain formally acknowledges the independence of Chile.
1851–1861. The country prospers during the presidency of Manuel Montt.
1865. Chile and Peru engage in war with Spain, which is terminated in 1869 through the mediation of the United States.
1879. Bolivia and Peru declare war against Chile, accusing her of having seized Bolivian nitrate mines.
1881. The Chileans capture Lima, January 17, and sack the city.
1883. The allies secure peace with Chile by cession of territory.
1885. The liberal orator, Balmaceda, is elected president.
1891. Balmaceda, showing himself a despot, is deposed, commits suicide, and is succeeded as president by Admiral Jorge Montt.
On October 16, American sailors from the man-of-war *Baltimore* are attacked by Chileans in Valparaiso, one marine is killed, others are wounded. Redress is demanded by the United States.
1892. Chile offers apologies to the United States, makes reparation to the families of the injured sailors and salutes the American flag. The relations between the two powers have since been most friendly.
1902. Treaty of arbitration between Chile and Argentina.
1906. Pedro Montt is inaugurated as president.
1908. January 22, Congress passes a bill providing for the construction of a north and south railroad west of the Andes.
July 16, **A destructive earthquake** visits Chile, Peru and Bolivia.

CHINA.

The history of China shows three factors exerting a profound influence upon its long course. The first of these comprises the introduction of civilization from Western Asia in the twenty-third century B. C., and the gradual conquest and absorption by a more cultured race of the aboriginal population occupying the basin of the Yellow River — the process consuming perhaps something over a thousand years. The second involves the contest which begins with the consolidation of China under a single suzerain and extends through her entire history down to the present. It is a perpetual struggle between centrifugal and centripetal forces, the insistence of her people upon a large degree of freedom in local administration and the acknowledged sovereignty of a ruler who claims to be absolute. This factor has at times split the empire into a series of petty states, each unmindful of the interests of the others or of the nominal overlord, while at others it has under able rulers admitted a consolidation that is the very type of unified control. The third factor, commencing possibly as early

as the 15th century B. C., also continues through Chinese history down to recent times; this involves the repeated invasion of central China by nomadic Tatar tribes from the north, who have repeatedly possessed themselves of the northern belt of provinces, and twice, in the 13th and 17th centuries, succeeded in the complete subjugation of the whole empire. The secular movement southward of these barbaric but hardy folk, and their eventual absorption in the more civilized mass, have undoubtedly invigorated and prolonged the life of the Chinese race, though not without terrible suffering to individuals.

These movements in the national life of China are not always conterminous nor do they occur in sequence; on the contrary, their governing influence arises from their distinct and separate causes and their inevitable action and reaction upon one another in process of time and under pressure of circumstances. An understanding of them imparts meaning and movement to the otherwise monotonous succession of unremembered dynastic names.

Chinese historians are accustomed to group the long list of sovereigns under twenty-four dynasties, beginning with the legendary Yu the Great, 2205 B. C. Under the first three of these, the Hia, Shang, and Chow lines, the process of civilizing and amalgamating the aborigines was going on, while the sovereigns had also to provide against the constant dangers of invasion from barbaric tribes across their borders and of rebellion and disunion within. The "Middle Kingdom" of this period, literally in the center of the world of Eastern Asia, stretched only from about the line of the present Great Wall to, but not beyond, the Yang-tse River. The real founder of China, the origin of the name as known abroad, and the first to extend its boundaries to about their present limits, as well as to take the title of Hwang Ai or "Emperor," was a vassal of the feudal fief of Tsin, or Chin, who overthrew the ancient house of Chow and established the fourth dynasty in the middle of the third century B. C. Though feudalism was abolished and a Great Wall erected against the Tatars by this prince, these two influences were hardly less active than of old upon the subsequent fortunes of China. Dynasty succeeds dynasty; only seven of these enjoy terms over a hundred years long; many must content themselves with but a meager portion of the imperial domain, while they see the remainder governed by successful rebels and invaders. The prostration resulting from civil war or invasion is never completely overcome.

But China during the past two thousand years has not been without its intervals of greatness. The Han period, which followed the expansion and reconstruction era of Tsin and was contemporary with the greatest power of Rome, lasted 470 years, and is marked by the revival of letters (179 B. C.) and the introduction of Buddhism (67 A. D.). Other notable epochs in the intellectual life of the nation were the Tang (620–907) and the Sung (960–1127) dynasties, when poetry and philosophy flourished and the civil service system received its present form. The Yuen or Mongol dynasty (1280–1368) represents the first conquest of China by foreigners, and the establishment of the capital in its present location. So magnificently successful were the arms of Genghis Khan and his successor, Kublai, that all Asia with the exception of India and Japan obeyed them. The Mongols completed one great work for China, the Grand Canal, 700 miles long, but soon yielded to the enervating influences of a civilization much above their own. Their successors, the Mings, a native house (1368–1644), ruled brilliantly and well at a time when Europe was slowly emerging from the stagnation of the Middle Ages, but eventually gave way to another branch of the great Tatar family, the Manchus, who conquered the empire while the Thirty Years' War was convulsing Europe, and founded the Tsing dynasty, which endures to this day under its tenth monarch, Hsuan Tung, a child three years of age. The accession of the present ruler was proclaimed in December, 1908, on the almost simultaneous deaths of the nominal emperor, Kuang-hsü, and of the real sovereign, the Dowager Empress Tzu Hsi. This able and unscrupulous woman was dominant in Chinese politics for almost thirty years.

The changes begun in the history of China during the nineteenth century cannot be sufficiently emphasized. With the coming of Europeans in numbers to her shores an entirely new factor entered into the influences which determine her fortunes. A still larger factor is the example of the Japanese Empire as revealed at the beginning of the twentieth century.

Government. The foundations of the vast system which controls China are in the main as old as the time of Confucius. The emperor is the nominal head of all, but the real power lies chiefly in the hands of a palace clique and the bureaucracy in Peking. The chief departments of the latter are the six Boards of Civil Office, Revenue, Ceremonies, War, Criminal Justice, and Public Works, to which may be added the Colonial Office, Naval Board, and Censorate — this last a sort of Court of Appeal and a check upon the other officials, not excepting the emperor himself. The provinces are administered by governors (one over each) and governor-generals (one over two provinces), with a multitude of functionaries, civil, judicial, and military, under each, every province having its magistrates, troops, and revenues distinct from the others. The chief vice of the system is its pluralism; another is the transferring of officers from one position to the next without regard to fitness or preparation. Though subject to appointment and removal by the emperor, there is a singular independence of imperial control on the part of these provincial governors, who raise and spend their own revenues, command as large armies as they can afford, and often defy their chief at Peking — a modern phase of the centrifugal factor in the body politic of China. The last few years have been prolific in imperial decrees aiming at governmental and administrative reform, and commissioners have been sent abroad to study foreign systems. The late Empress intimated her intention to convene a parliament and publish a constitution. In December, 1908, an "unalterable" decree was issued for the convocation of parliament in 1916.

Industry and Resources. The empire is populated by perhaps the most industrious and tractable race on earth. Its natural resources, both in mineral wealth and the fertility and varied productions of the soil, are enormous. Its chief need is the machinery for producing and transporting whatever is raised or made, and a due sense of their backwardness in this respect on the part of the people. Tea, silk, cotton, and wool are their time-honored staples of export, and these, with rice, opium, tobacco, and grain, form the mainstays of internal trade.

Religion. The practical Chinese have never been much given to any deeply spiritual forms of belief. Confucius recognized a sort of divinity in the sovereign, but he was too sober-minded and conservative to formulate a religion in its proper sense. His models were the legendary monarchs of antiquity, his state a pure bureaucracy, his philosophy an ethical system based upon respect for one's parents and betters. The institution called Taoism, which dates from Lao-tse, a sage of the sixth century B. C., ranks as the second religion of China. It points to the attainment of good by abstaining from contact with the things of this life, but its doctrines lack definiteness, and its practices at the hands of a degraded priesthood have sunk to the cheap vagaries of necromancers and mountebanks. Buddhism constitutes the third creed of the country. It did not reach China until its career was half spent in India. Its doctrines have been amended and reinterpreted in China until they have become quite distinct from those accepted in Ceylon, Burma, or Japan. Its temples abound in all parts of the empire, but it exists rather than flourishes after nineteen centuries of activity under divers sects and forms. The Buddhism which has its Pope, or Grand Lama, and religious capital in Tibet, is quite different from that of China proper, and exercises supreme control over a majority of the Mongol subjects. It is a peculiarity of the Chinese that they accept the tenets of all of their religious systems with no apparent sense of inconsistency. The Emperor exercises sacerdotal functions twice annually, in accordance with the requirements of each of these religions.

Education. Inasmuch as no one was allowed to serve his country without passing an intellectual test, education might be esteemed the mainspring of Chinese society. But every one had to acquire the difficult art of reading and writing Chinese under private tuition. The examinations which admitted to public life were open to all. They were of three grades and held at intervals of three years. The first took place in every provincial town throughout the empire; the second, held in the provincial capital, admitted only those who had passed the first; the third, limited to those who had taken the two lower degrees, was offered at Peking. Probably not more than one per cent of the aspirants succeeded in each examination. Only those who succeeded in the third were given office, but defeated candidates might return at each triennial test. The subjects of these trials were always taken from the classical "Nine Books." The essays upon the topics propounded required neither broad learning nor originality. But probably no other educational system has demanded so severe training in memory and style. Its conservative effect upon fifty generations of Chinamen and its establishment of an intellectual aristocracy is unparalleled. Yet of the entire population not more than one man in twenty or one woman in a thousand could read or write.

Such was Chinese education until after the beginning of the twentieth century. Since then an imperial decree on September 3, 1905, abolished the traditional system of examinations. The tremendous impulse of a new educational movement, manifesting desire for western learning, has been felt throughout the empire. Schools have everywhere sprung up. The Imperial University at Peking, a government institution where foreigners teach European languages and university subjects; the Union Medical College, founded by a British missionary and supported by public subscription; the Chinese University, the Anglo-Chinese college; the Japanese Industrial school, at Tientsin; the sixty government schools in the prefecture of Wuchau; the colleges in the provincial capitals, and the host of mechanical, military and agricultural institutions; the schools connected with the military establishments and arsenals; are all indicative of the new order. In causing this awakening the Catholic and Protestant mission schools have had an immense share. The exodus of Chinese youth to Japan to obtain instruction seems to be checked as their own country is beginning to bestow what they sought abroad.

Defense. In no other country has the military arm been so neglected and disdained as in China. In consequence no other country has been so powerless to put down disturbance at home or ward off aggression from abroad. Its army, as far as such a thing existed, was made up of "shreds and patches." It consisted of the "Eight Banners" who drew pay but could not fight; of the "Green Flags," equally useless; and of scattered, disconnected provincial troops, insignificant in numbers and without efficiency. An imperial decree in 1905 ordered the immediate undertaking of a scheme of organization which was to be completed by the year 1922. It aimed at an army, modeled after the Japanese system and commensurate with the needs and resources of China. An adequate navy was also under contemplation. As yet the progress in these reforms has been slow.

The area of China proper is 1,532,420 square miles; and of the Chinese Empire, that is, including Manchuria, Mongolia, Tibet and Chinese Turkestan, 4,277,170 square miles. The Chinese Government in 1902 estimated the population of China proper at 407,253,030 and of the Chinese Empire at 433,553,030.

1644. The **Ta-Tsing,** or "Great Pure," **Dynasty** is established at Peking by the victorious Manchu Tatars; Shun-chi, ninth son of Tienning, is proclaimed emperor. The Mandarins of Nanking set up an imperial Prince or claimant, but the Tatars capture the city, and the Ming dynasty is extinguished.

1656. A Russian Embassy under Baikov arrives at Peking, but is rejected because of a refusal to perform the ceremony of *kotow*, or obeisance to the Emperor.

1661. Shun-chi dies, and is succeeded by his son, Kang-hi, who is instructed in scientific and literary pursuits by German Jesuits at the Emperor's court.

1666. Albazin, the first Russian settlement on the Amur, is founded.

1689. By the treaty of Nerchinsk the Chinese compel the Russians to withdraw from the Amur valley.

1721. Kang-hi expires after a glorious reign of sixty years, during which the **empire is extended** from Siberia to Cochin China, and from the China Sea to Turkestan.

1724. An imperial edict prohibits the propagation of Christianity in China and **expels the missionaries** with the exception of a few whose services are required for scientific purposes at Peking.

1735. Kien-lung, son of Emperor Yungching, accedes to the throne. He makes **warlike invasions** into Ili, Turkestan, Burma, and Cochin China. The Mohammedans establish themselves in Kansu.

1755. Russian caravan trade with China is relegated to the frontier town of Kiackta, where it remains until 1895.

1784. The Emperor Kien-lung issues an edict that all the Mohammedans in Kansu above the age of fifteen years shall be exterminated.

1792. The Emperor completes his victorious war against the Gorkhas, and receives the submission of Nepal and Tibet.

1793. Lord Macartney, the **first British ambassador** to Peking, is received by Kien-lung.

1795. Kien-lung abdicates in favor of Kia-king, his fifteenth son, who reigns for twenty-five years, during which China is in a **distracted condition** on account of the weakness of the government, successive rebellions, and invasions of the coasts by pirates.

1807. Rev. R. Morrison, the **first Protestant missionary,** reaches Canton.

1816. Lord Amherst, ambassador of Great Britain, arrives at Peking; the mandarins insist that in order to secure an interview he must do the traditional obeisance (the *kotow*). Declining to do so, Lord Amherst is dismissed from the imperial palace on the day of his arrival.

1820. The Emperor **Kia-king** dies and is succeeded by Taou-kwang; he begins his reign with promises of reform (unfulfilled); rebellions break out in Formosa, Kwangsi, Ho-nan, and other provinces.

1823. Morrison's **translation of the Bible** into Chinese is published in 21 volumes.

1834. The monopoly of the East India Company ceases, and the British government sends Lord Napier to Canton as its representative. The Emperor of China **forbids the importation of opium.** In the following year the Chinese seize the ship *Argyle* and its crew; the stores of opium at Canton are surrendered and destroyed.

1840. The emperor issues a decree forbidding all intercourse with England forever. With this act the so-called **Opium War** begins.

1841. The British capture the Bogue forts, on the Canton river, also the fortifications of the city, and occupy Amoy.

1842. Shanghai is seized by the English; in July, Chinkiang is taken and the army moves against Nanking. In August, a **treaty** is made at Nanking, by which it is stipulated that the **ports** of Canton, Amoy, Fuchau, Ningpo, and Shanghai shall be **opened** to commercial relations with Great Britain; Hongkong is ceded to Great Britain; this treaty is ratified in 1843.

1844. The **first treaty** between China and the **United States** is negotiated by Caleb Cushing at Macao. Other treaties with European nations are concluded the same year.

1850. The **Taiping rebellion** begins.

1851. A pretender to the throne, named **Hung Siu-tsuen, calling himself** Tien-Wang, appears.

1852. The rebels are victorious and destroy a large part of the imperial army under Lou, June 19.

1853. The rebels capture Nanking, March 20; Amoy is taken, May 19, and Shanghai falls, September 7. The insurgents fail, however, in a siege of Canton, in August and November.
The **collection of customs** duties from foreign vessels is put in charge of **Europeans** at Shanghai; the system, proving profitable and satisfactory, is made permanent.

1855. The imperial forces retake Amoy and Shanghai.

1856. On October 8, the Chinese officials of Canton board the lorcha *Arrow*, carrying the British flag, and carry away most of the crew; thereupon the **British** resort to **measures of retaliation** and Canton is attacked.

1857. The English, with French allies, bombard Canton, and the city is occupied by them, in December.

1858. The English and French troops capture the forts at the mouth of the Pei river. The Emperor hereupon consents to a **treaty of peace** at Tientsin with Great Britain, France, Russia, and the United States; the Amur is ceded to Russia. In all these treaties the **practice of Christianity is allowed** in China.

1859. On August 15, a **commercial treaty** with the **United States** is signed at Pehtang, after the Americans had been conducted to Peking but refused an audience there because unwilling to perform the *kotow*. Great Britain and France become engaged in another war with China, owing to the refusal of the Chinese to allow their representatives on the Pei river.

1860. A force of English and French advance on Peking, which is occupied in October. The Summer Palace is destroyed by way of reprisal for ill treatment of European captives. This measure induces the Emperor to observe the treaty. Canton is restored to the Chinese.

1861. The Emperor Hienfung dies at Jeh-ho, in Manchuria, whither he had fled from the allies.

1862. The **French and English give aid to the government against the rebels** who have made a considerable advance.

1863. In October, the imperial army under the command of Colonel **Charles George Gordon** overwhelms the rebels, and on November 28 Gordon captures Suchau.

1864. Gordon takes Changchau, on March 23, and then captures Nanking. Tien-Wang, the rebel leader, kills himself, June 30.

1865. The rebels are successful in the north and in Peking.

1866. Under the administration of the great minister **Li Hung Chang, the power of the Taipings is broken.**

1867. China sends her **first diplomatic mission** to Western nations under the American ex-minister, **Anson Burlingame.**

1868. The **Burlingame Treaty** between China and the United States is negotiated at Washington.

1870. The French consul and many Christians at Tientsin are massacred by a mob, on June 21. An official apology is made to France in 1871.

1872. Thirty Chinese boys are sent to the United States by their government to be educated. The number is subsequently increased to one hundred.

1873. Tali, the capital of the Panthay Mohammedans who have revolted, is captured by the imperial troops, and a vast number are massacred. The Emperor, coming of age, receives all the foreign ministers in audience at Peking without demanding the objectionable *kotow*.

1875. On the death of Tung-chi, Tsai-tien becomes Emperor of China, with the title of Kuang-hsü.

1876. The Chifu convention between the British minister, Sir T. Wade, and Li Hung Chang opens four new ports for trade, and settles opium, transit duty, judicial and other matters between Great Britain and China.

1877. A **terrible famine** occurs in the provinces of Kiangsu, Shantung, Pechili, and Shansi.
Chinese troops reconquer Kashgar from the Uzbeg rebel, Yakub Beg, who has held the country for ten years.

1878. The famine of the preceding year continues; ten millions of people are reduced to the verge of starvation. The insurrection in Kwangsi assumes formidable proportions. The insurgents are again led by Li Yung-Choi, who had participated in the Taiping rebellion.

1879. The Hakkas of the island of Hainan rise in rebellion and commit horrible atrocities. They defeat the imperial troops, but are subsequently overwhelmed and reduced to submission.
In May and June, **General Grant,** ex-President of the United States, visits Peking and other important cities, where he is received with every mark of distinction. Li Hung Chang, Grand Secretary of the Empire, rises to distinction, superseding Prince Kung as the official representative of China in foreign affairs.

1880. On November 17, an important **treaty** is concluded between **China** and the **United States.** The American representatives are President James B. Angell of the University of Michigan, Hon. John F. Swift, Hon. William Henry Trescott. The representatives of the Chinese Empire are Pao Chun and Li Hung-tsao, both of the Imperial Privy Council.

1881. A **treaty** is concluded at St. Petersburg between **China and Russia** for the retrocession to the former by the latter of the Province of Kulja. As a reciprocal concession, Russia is granted an important extension of commercial privileges in the Chinese Empire. The Chinese youths sent to the United States for education are all recalled; they are given inferior positions in the arsenals and civic service of China.

1882. The wholesale **immigration of Chinese** into the **United States** is **forbidden** by act of Congress. The immemorial prejudices and obstacles preventive of intercourse between China and the Western nations are in a measure removed; this is effected largely through the influence of the Viceroy and Grand Secretary **Li Hung Chang.**

1883. In September, **serious riots** occur in Canton. Two cases of crime committed upon Chinamen by Europeans are unpunished because the criminals take refuge in the foreign consulates. A mob fires and plunders fourteen warehouses belonging to English, German, French, and American companies. A **fleet of gunboats,** British, French, and Chinese, **suppress the insurrection.**

1884. China becomes involved in a **war with France;** the French destroy the arsenal and fleet at Fuchau. (See FRANCE.)

1885. The Franco-Chinese War continues, and the resistance of the government to the foreign invasion weakens. The national spirit, however, is strong and patriotic. After a somewhat ineffective invasion of Formosa the **French withdraw,** and peace is concluded.

1887. The most disastrous **overflow of the Hwang (Yellow) River** known in modern times occurs in September; a region estimated at 50,000 square miles is covered with water and more than a million human beings are drowned. The sufferers from famine and disease during the year that follows are probably four times this number.

1889. Another famine in Northern China affects 12,000,000 people.

1890. A serious **rebellion in Formosa,** beginning in the preceding year, gains headway, and the rebels defeat the Chinese forces.

1891. Bloody riots and **outrages against the Christians** occur in many parts of China; mobs attack the churches, drive away or murder the missionaries, and expel the Christian population.

1892. A rebellion occurs in Mongolia and Manchuria. It is put down, and 8,000 of the insurgents are killed.
Serious difficulties with the United States occur on account of the enactment of the Chinese exclusion bill.

1893. The **ascendency of Li Hung Chang** becomes more pronounced; his enlightened policy does much to conciliate the Western nations.

1894. On August 1, a formal **declaration of war by Japan against China** is published at Tokyo, and the counter declaration of the Chinese government is made at Peking. A treaty of alliance against China is made between Japan and Korea. The Japanese fleet and army begin an invasion, Phyongyang is captured, and Manchuria is invaded. On September 17, occurs the decisive naval engagement of the war off Haiiang island, in which the Japanese fleet is victorious. **Port Arthur is taken,** November 21. The Japanese onset is irresistible and the **Imperial government** is obliged to **sue for peace.**

1895. The **climax of anti-foreign feeling** in China is marked by persecutions and murders in the provinces of Szechuan, Fukien, and elsewhere. Weihaiwei is besieged by the Japanese by land and sea. On January 30, the Japanese make an assault on the forts, which are surrendered on February 12. The land fortifications are destroyed, and the Japanese withdraw from Shantung Peninsula. The peace negotiations continue. On April 10, Count Ito submits to the Viceroy Li a new draft of the maximum concessions which Japan is willing to grant, and Li Hung Chang is obliged to accept the ultimatum. An armistice is declared and extended to May 8. The Russian, French, and German governments protest against the exacting terms demanded by Japan, and these terms are modified. The cession of territory is reduced and the indemnity moderated to $280,000,000.

1896. A **commercial treaty,** drawn in accordance with the compact of the preceding year, is signed at Peking. China grants to Japan all the rights conceded to the most favored nation. The Mohammedan insurrection in northwestern China continues active. At Kiangyin an anti-Christian riot occurs, in which the American Protestant mission is sacked and the Christians are expelled.
In December, on the strength of an agreement between the Chinese government and the Russo-Chinese Bank, **Russia** secures the right to construct a **system of railways** in Manchuria, under the name of the Eastern Chinese Railroad Company, connecting the Siberian railroad with Kirin, Vladivostok, and the Liaotung promontory. The company is to be under Russian control for eighty years and is to have the right to guard its stations with Russian troops, to exploit the mines, industries, forests, etc., of the region, and to import goods from Siberia at a lower tariff than obtains at the treaty ports. The effect of the agreement is substantially the **transfer of all Manchuria to Russian control.**

1897. In November, **Germany secures a foothold** in China by the seizure of the town and bay of Kiauchau in southern Shantung in reprisal for the murder of two missionaries in that district. The occupation involves the administration of the adjoining territory and is nominally limited to a lease of ninety-nine years, but it doubtless involves the German empire intimately in the claim for spoils in case China is partitioned among the great powers.

1898. In February, **Port Arthur and Talienwan are leased to Russia** for a term of twenty-five years, thus giving her an arsenal of great strength and strategic value and an ice-free port as terminus for her Siberian railway. **Great Britain** for her part secures, immediately after the announcement of this concession, a lease of the fortified harbor of Wei-hai-wei upon somewhat similar terms, to continue until Russia ceases to occupy Liaotung Peninsula, thus obtaining a **naval base similar to Russia** on the Gulf of Pechili. By a previous negotiation Great Britain and Germany together agree to provide China with a loan of £16,000,000 to pay 4½ per cent interest on bonds at 88, out of which the remaining installment of the indemnity may be paid to Japan. In return for this the Chinese promise to leave the control of their maritime customs service in charge of a British Inspector General so long as British trade with China is more important than that of any other foreign nation; they also agree never to alienate any portion of the Yangtse basin, to open all internal waters of the empire to foreign trade, and presently to open new treaty ports to commerce. **France** is granted the right to **extend a railway** from Tonquin into the southern provinces of China, and Great Britain that of tapping the upper Yangtse trade by a railroad to penetrate Western China from Burma. Great Britain also obtains (in June) a lease for ninety-nine years of a considerable tract of land and water surrounding Hongkong, thus greatly strengthening her naval base.

1900. In January, the United States secures from the "World Powers" recognition of her right to trade in all parts of China.
Emperor Kuang-hsü is deposed by the Dowager Empress, January 24.
Serious disorders in several provinces lead the "Powers" to demand, April 7,

the suppression of Anti-foreign League, or Boxers. Missionaries and native Christians are murdered near Peking in May. June 17, European warships attack Taku. June 18, mob murders Baron von Ketteler, German minister, in Peking, and attacks other legations. Relief expedition of allied forces under British Admiral Seymour repulsed by Boxers. Allies capture **Tientsin,** July 13–14. They enter Peking, August 14, after severe fighting at Peitsang and Yangtsun.

1901. The negotiations begun late in 1900 result in a **peace protocol** finally signed September 7, 1901, by China and the representatives of the United States, Great Britain, Germany, France, Russia, Japan, Belgium, Spain, Austria, and Italy. A résumé of the requirements (some already fulfilled) follows: —

1. Formal apology for murder of German ambassador, Baron von Ketteler, made by Prince Chun in presence of German Emperor, September 4. Monument to ambassador's memory. 2. Punishment of principals in Boxer outrages. Suspension of examinations for five years in cities where foreigners had been killed. 3. Apology to Japan for murder of Japanese Chancellor of Legations. 4. Monuments to be erected in desecrated foreign cemeteries. 5. Importation of arms and ammunition forbidden for two years or longer at the discretion of the powers. 6. Indemnity of 450,000,000 Haikwan taels ($335,000,000) to be paid between January 1, 1902, and 1940, with interest at 4 per cent on all deferred payments. Payment to be secured by various customs duties. 7. Legation quarters in Peking to be made defensible and all Chinese excluded. 8. Forts at Taku and elsewhere between Peking and sea to be razed. 9 Permission to the powers to occupy certain points, including Tientsin, necessary to keep open communication with Peking. 10. Posting of edicts prohibiting anti-foreign societies and providing punishment for rulers in case new outbreaks occur. 11. Provision in treaties for improvement of navigation in the Pei river and Whangpoo. 12. The Tsung-Li-Yamen to be replaced by a ministry of foreign affairs.

In accordance with this treaty, on September 17 all foreign troops, except legation guards, leave Peking, and the Chinese troops return to the city. November 7, **Li Hung Chang dies** at the age of 79.

November 18, an agreement is reported by which China grants to Russia exclusive mining and railway privileges in Manchuria and command of all Chinese troops there. Russian occupation to end in three years.

1902. Great progress is made in the restoration of the native rule. Royal exclusiveness is to a certain extent ended. January 7, the court returns to Peking with a great pageant. January 22, foreign ambassadors are for the first time received as representatives of sovereigns equal in rank to the Chinese emperor. April 3, an edict is published allowing marriage between Manchus, the governing race, and Chinese. It also advises the **disuse of foot binding,** and provides for the study of Western methods by competent Chinese.

April 8, **Manchurian convention** between Russia and China is concluded. It provides for the gradual evacuation of Manchuria, and withdraws demands previously made for exclusive mining, industrial, and banking privileges. In September and October the territory south of Liao river is evacuated by Russia.

May 3, a **serious revolt** occurs in South China, due to anti-foreign feeling and the heavy taxation for the war indemnity. Hundreds of Roman Catholic converts are killed. Revolt is ended, September 15, by the death of thousands of rebels and the execution of their commander.

In May a serious question arises, caused by the fall in price of silver, as to whether the indemnity should be paid on a silver or gold basis.

1903. The chief events of the year are connected with the diplomatic sparring of the "powers" over Russia's position in Manchuria. She is to leave on April 8, but merely shifts her troops, and on April 18 makes demands for exclusive political and commercial rights as a condition of evacuation. As these come into collision with certain treaty rights of Japan and the United States, emphatic protests are made, and on July 16 Russia agrees to open the ports. October 8, a commercial treaty with the United States is signed. In September new demands are made on China by Russia, and at the close of the year she is still in possession of Manchuria, with the apparent intention of remaining there.

1904. All other events of the year are overshadowed by the Russo-Japanese war. A proclamation of neutrality is issued, February 13, but this is apparently violated on at least one occasion. Russia's claims for compensation are reserved to the close of the war. (See JAPAN.)

1905. August 29, a commission is appointed to visit and study Western parliaments. October 30, Rear Admiral Train, in command of the Asiatic (U. S.) fleet, is assaulted by a mob near Nanking and his son held as hostage on account of the accidental shooting of a Chinese woman. August 29, an American railway concession is canceled by payment of $6,750,000. November 1, **five** American **missionaries** of the Presbyterian Board are **killed** at Lien Chau. The year is marked by a boycott against American merchants, due to certain features of the Chinese Exclusion Act, and a spread of Western ideas brought about largely by the Japanese successes against Russia.

1906. February 26, four English Protestant missionaries and six French Roman Catholic priests are killed at Nanchang in **anti-foreign riots.** Much anti-foreign spirit leading to disturbances is shown throughout Southern China in early months of year.

September 2, Emperor issues proclamation stating that conservative constitution will be granted after details are worked out in the next few years. September 18, typhoon at Hongkong does great damage to shipping and water front. Estimated loss, 10,000 lives; several million dollars (exact figures unknown).

September 21, Emperor issues edict ordering diminution of opium growing, traffic, and consumption, at the rate of ten per cent a year until wholly abolished.

1907. In January and February a revolution against Manchu rule assumes serious proportions in Central China, but is finally repressed by the imperial troops, with little hard fighting.

April 15, China resumes rule over Manchuria, Russian and Japanese troops having been withdrawn.

September 20, Dowager Empress orders the organization of an **advisory council of state,** presumably as a step toward constitutional government.

1908. March 22, an agreement is reached with Great Britain, **restricting the importation of opium.** An edict prohibits the growth and sale of the drug, but allows those interested ten years to wind up their business.

May 8, China requests the assistance of France to put down a rebellion on the frontier of Tonkin.

November 14, at Peking the **death** is announced **of the Emperor, Kuang-hsü,** and on the 15th of the **Dowager Empress,** Tzu Hsi. Hsuan Tung, the three-year-old child of Prince Chun, becomes emperor, his father being regent. December 4, an imperial decree reaffirms the promise of the late Empress Dowager for the convocation of a parliament and the proclamation of a constitution. It fixes the date for convocation as the eighth year of the emperor Hsuan Tung, who begins his formal reign on January 22, 1909.

December 27, at Tungan eleven persons are killed for resisting the attempt of the government to prevent the planting of opium poppies.

1909. May 11, China and Russia sign agreement regarding **railway in Manchuria.**

COLOMBIA.

THE coast of what now constitutes the territory of Colombia was known to the Spaniards at the beginning of the sixteenth century. The country had been already civilized by the Chibchas, who had their capital in the highlands of Bogotá. The aborigines of the coast were in a barbarous condition. The Spaniards conquered the country in 1535–36. With their accustomed ferocious energy, they seized the Chibcha towns and slaughtered the inhabitants. The country became a province, and under the Spanish administration was made subordinate to the viceroys of Peru. This relation was maintained for nearly two centuries.

In 1740, a new territorial division was made by which Colombia and Quito, and Venezuela at a later date, constituted a separate viceroyalty, under the name of New Granada. This government held its relation under the Spanish crown until the House of Bourbon was overthrown and expelled from Spain by the Emperor Napoleon. The effect of this convulsion was immediately felt throughout Spanish America. In New Granada, a rebellion against the mother country was organized in 1811. At first, the movement was unsuccessful. The Spanish authorities were sufficiently strong to crush the revolt, which they did in a memorable manner. The insurgent patriots were shot by hundreds. The spirit of the people, who were mountaineers, could not be quelled. In 1819, the rebellion broke out afresh, and at the head of the movement appeared General Bolivar. On the seventh of August of that year he won a great victory over the loyalists at Boyacá. The viceroyalty was overthrown with the capture of the capital by the patriots. A new government was constituted, including New Granada and Venezuela, under the name of the republic of Colombia. General Bolivar was elected president.

Soon afterward, Ecuador was incorporated with the republic, but this relation was held only until 1831, when the union was dissolved. Hereupon, another republic was created under the title of New Granada. With this ensued a series of struggles, sometimes factional and sometimes revolutionary. Rarely was there a state of settled peace. With each revulsion the government was not only transferred from party to party, but was altered, amended or abused, according to the caprice of the party in power. In 1861, a counter-revolution occurred, in which the republic was constitutionally changed, and the name of the United States of Colombia was adopted. Twenty-five years later a new constitution was formed and the state took the name of The Republic of Colombia. The secession of Panama in 1903 was a severe blow to Colombia as the Isthmus was a valuable asset. Colombia has had much trouble with Venezuela, first as to boundary and then as to internal affairs.

Government; Defense. Colombia, like most of the South American republics, corresponds in government to the general type of the United States of America. The President is chosen by electoral colleges for four years, and has a cabinet of eight secretaries. By exception the present president, General Reyes, is appointed to hold office from January 1, 1905, to January 1, 1915. The House of Representatives, elected for four years, consists of sixty-seven members, one for each 50,000 inhabitants. The Senate consists of forty-eight members. The Governors of the departments are appointed by the President. Universal suffrage prevails. All able-bodied natives are liable to military duty. The peace footing of the army was fixed at 1,000 men in 1898, but was thereafter to be determined each session by act of Congress. Since 1905 it has been 5,000 men, who are chiefly employed in making and repairing highways. The navy consists of five cruisers, three gunboats, one troopship, and one tug of small efficiency.

Religion; Education. Roman Catholicism prevails, with toleration of all other religions. Primary education is free but not compulsory; it practically reaches only a relatively small number. There are a national university, several departmental universities, and numerous private colleges.

Industry and Labor. The country is especially rich in gold and silver, and somewhat productive of iron, coal, and other minerals. The chief agricultural products are coffee, cocoa, tobacco, sugar, and dyewoods, beside cereal grains; and there are extensive grazing districts. The country is very imperfectly developed, much fertile soil lying idle for want of facilities of transport.

The area is 444,980 square miles. The population in 1905 was estimated at 4,274,674.

1535. The Chibcha country, now Colombia, is conquered by the Spaniards.
1811. As New Granada it revolts from Spain.
1819. The patriot, Simon Bolivar, accomplishes the union of New Granada and Venezuela.
1824. General Bolivar is named dictator.
1830. After many vicissitudes President Bolivar resigns, April 4, and dies December 17.
1831. Venezuela secedes.
1858. New Granada and various small states, among them Panama, Bolivar, Antioquia, form the Granadine Confederation.
1861. The name of the United States of Colombia is adopted.
1866. General Mosquera proclaims himself dictator; is deposed by Santos Acosta in 1867.
1886. A new constitution is formed.
1891. March 16. The award of the Queen of Spain determines the **Colombian-Venezuelan boundary.**
1901. General Uribe Uribe leads a serious Liberal insurrection against the government. He is said to be aided by President Castro of Venezuela (see VENEZUELA).
1902. The contest of Generals Marin and Uribe Uribe with the government continues, until General Marin surrenders in September, and General Uribe Uribe on October 28. A treaty of peace is signed, November 21. **Complications with the United States** result from Admiral Casey's closure of the Panama railroad to troops because of a pending attack. By the death of President San Clemente, March 19, the acting vice president, Marroquin, becomes president.
1903. General Uribe Uribe commits suicide, January 22.

Owing to the rejection of the Canal treaty with the United States by the Colombian Senate on August 17, the **State of Panama secedes,** November 3. The United States forbids the transportation of the troops of either combatant on the Panama railroad On November 6 the new Republic of Panama is recognized by the United States, and later by France and other European nations. Colombia protests, and on November 13 decides on war against Panama. November 18, an Isthmian canal treaty is signed at Washington by Secretary Hay and M. Bunau-Varilla, Panama's representative. In this treaty the United States guarantees the independence of

Panama and is to pay her $10,000,000 outright, and $250,000 annually, beginning nine years after the conclusion of negotiations. Panama gives to the United States the right to occupy and control a strip of land 10 miles wide extending across the isthmus. The **canal is to be forever neutral.** On December 2 this treaty is ratified by the provisional government of Panama. November 28, Colombia offers a free canal concession to the United States if the latter will permit the subjugation of Panama.

1904. March 31, the civil tribunal of the Seine at Paris decides the suit of Colombia against the Panama Canal Company in favor of the defendant. This removes the last obstacle to the transfer of the canal property to the United States. (See PANAMA.)

May 2, the constitutional assembly approves the change in the presidential term of office from four to six years.

July 6, General Rafael Reyes is proclaimed president.

1905. June 5, diplomatic relations with Venezuela are resumed.

September 12, the Colombian boundary on the side of Peru and Ecuador is submitted to the decision of the King of Spain.

CUBA.

THE island of Cuba was the most important insular country discovered by the adventurers at the close of the fifteenth century. Columbus gave to the island the name of Juana, in honor of the Infante Juan, son of Ferdinand and Isabella. Afterwards the name was changed to Fernandina, and still later to Santiago. Still again it was called Ave Maria. Finally history accepted the aboriginal name of Cuba.

The native Cubans were a peaceable people, having a monotheistic belief, performing no bloody rites, and cultivating the practical humanities. There were nine Caciques, or native rulers, of as many principalities at peace with one another, and a certain Arcadian simplicity pervaded the lives and institutions of the people.

The Spaniards quickly realized the importance of Cuba, and as early as 1514, Santiago and Trinidad were founded. Baracoa was a still older plantation. Diego Columbus lived to see his father's empire begin to be developed. Havana was founded in 1519, though this name had first been given to San Cristobal. Twenty years afterward, when Havana was burned by French adventurers, Fernando de Soto built the fortress of La Fuerza, which still stands. A second time, in 1554, the French succeeded in destroying the capital town, but it was quickly rebuilt.

The first insular enterprise of the Spaniards was to get possession of the mines. In this they showed the utmost rapacity. The natives were reduced to slavery, and driven in relays into the interior, where their lives were consumed under the lash of their masters. When the mines ceased to yield, the raising of cattle became the principal industry of the colonists, who had now supplanted the native races. The tobacco and sugar industries came next, and in order to prosecute these, negro slavery was introduced. By the close of the century, the fortifications of Havana had been improved. The richness and extent of Cuba made the island a coveted prize, and the leading nations of western Europe sought to possess it. Besides, the West Indies became a seat of piracy, so that the Spaniards found it difficult to protect themselves against their enemies. In 1665, the capital town was still further protected with walls. From this time forth, however, the decline of the home kingdom told on the dependencies, and Cuban enterprise and progress were relaxed. Meanwhile, both Great Britain and Holland secured a firm footing in the West Indies, and for nearly a century, the status of the islands was not greatly disturbed.

During the intercolonial wars in North America, Cuba shared the vicissitudes of the conflict. In 1762, a combined English fleet and army, commanded by Lord Albemarle, came down on Havana, and notwithstanding the valiant resistance of the Spaniards, captured the city. A large ransom was extorted, but in the following year, according to the terms of the treaty of Paris, Spain received back her dependency. Then followed in Cuba a period of revival and progress. In 1790, Las Casas was commissioned captain general of Cuba. Entering upon his administration, he introduced industries and social reform. Among other beneficent acts, he mitigated the condition of the enslaved natives. After five years, the fugitive French from Santo Domingo sought refuge in Cuba, and it was difficult to repress the insurrectionary tendency that was then rife throughout western Europe and in America.

Cuba, however, did not take fire. The people remained loyal subjects of the Spanish crown. When, in 1808, the Spanish Bourbons were deposed, the members of the Cuban government renewed their oath, and held the island for the deposed Ferdinand VII. The unusual loyalty of the Cubans invited, as it were, the practice of despotic methods by the officers who were sent out from the home government of Spain. When the Bourbons were restored, the captains general who governed the country became more and more absolute. The home administration permitted them to deal as they would with their subjects, and it was only when a governor was by nature humane and generous that the Cuban administration was tolerable. As to public liberties, there were none. All the great offices and sinecure positions were farmed out by the minister at Madrid, and the Cuban officials were permitted to reimburse themselves by the spoliation of the people. A system of heavy taxation was imposed and the expenses of a standing army and a navy were annually taken from the proceeds of their toil.

The spirit of freedom thus repressed began to struggle against conditions as early as 1829. A secret political society was formed, called The Black Eagle, having for its principle the emancipation of the Cubans. In 1844, there was a serious revolt of the blacks. Four years later, Narciso Lopez, an adventurer from the United States, made his first landing in Cuba with six hundred men. Being expelled, he returned in 1850, and again in 1851, when he was taken and put to death.

From this time forth, the spirit of reform and revolution increased among the Cubans. Meanwhile, a desire, very variable in its expression, had arisen in the United States to purchase Cuba from Spain. President Polk sought to accomplish this in 1848. Time and again the project was renewed, but it received little favor in the United States.

When the Spanish revolution of 1867–68 occurred, and the republican movement gathered head in the mother country, Cuba became agitated with the spirit of independence, an armed insurrection began, and a declaration of independence was made at Manzanillo. The revolution gained strength with time, and the Spanish authority was never able afterwards to restore itself completely in the island. The war lasted until 1876, when, though the rebellion was said to be suppressed, it was openly admitted that the Spanish armies, numbering 145,000 men, had never been able to put down the guerrilla warfare. Then came the great Cuban revolt of 1895, the desperate struggle for liberty, and in 1898 the recognition by the American Congress of the independence of the people of Cuba. Many years of misrule and fighting had impoverished the island, crippled its industries, and destroyed uncounted thousands of its people. During the last ten years it has enjoyed such tranquillity as it never experienced under Spanish rule and has made substantial industrial, educational and political progress.

Government. By the constitution, adopted on February 21, 1901, Cuba is a republic with a president and vice president, both elected for a term of four years, a Senate and House of Representatives. The president is assisted by a Cabinet of six members: Secretary of State and Justice; of Interior; Finance; Agriculture; Public Instruction; and Public Works.

Industry and Labor. The main interests are agricultural, tobacco, sugar, coffee, cocoa, cereals being principal products. The total production of sugar, which in 1896 was 225,221 tons, and in 1897 was 212,951 tons, in 1906 was 1,178,749 tons, over five times as much. Beds of asphalt and copper, manganese and iron mines are worked. The forests are rich in valuable woods, mahogany, cedar, and dye and hard woods.

Religion. Almost all the people are Roman Catholics.

Education. Education was in a backward condition prior to independence. Only 36 per cent of the inhabitants could read in 1899. In 1904 there were 1,936 primary schools and many colleges and institutes for higher instruction. The University of Havana has faculties of law, medicine, pharmacy, letters and science.

Defense. The army, as far as organized, is confined to police duty.

The area is 44,000. The population by the census of 1907 was estimated at 1,955,884.

1492. **Columbus,** on his first voyage, **discovers Cuba,** October 28.

1511. Diego Columbus, succeeding to the viceroyalty of the West Indies, organizes an expedition consisting of more than three hundred men for the colonization of Cuba. The **first settlement** is made at Baracoa.

1519. Havana, or Habana, the present capital, is founded.

1538. During the administration of Ferdinand de Soto, Havana is sacked by the French; as a means of future defense, De Soto constructs a fortress, existing to the present time.

1554. Havana is a second time assaulted and destroyed by the French.

1580. The **tobacco and sugar industries** become important, and to meet the demand for labor, negro slaves are imported to cultivate the staples.

1584. Havana is rebuilt and refortified by the construction of Morro Castle and Punta Castle at the entrance to the harbor.

1624. The Dutch make a descent on Cuba and gain possession of the island, but it is subsequently restored to Spain.

1688. Puerto Principe is plundered and destroyed by the filibusters, who have established themselves in the obscure parts of the West Indies.

1700–50. During a **period of peace,** the industries of Cuba flourish, and the people improve in their social, if not in their political condition.

1717. A tobacco monopoly is established, and the system remains in force for a hundred years.

1762. **Havana capitulates** to the English Admiral, Lord Albemarle, on August 14; the city is held by the English till the following year, when, by the treaty of Paris (February 10), the island is **restored to Spain.** The city of Havana becomes the center of the slave trade for the greater part of Spanish America.

1790. Las Casas receives the appointment as captain general of Cuba; his administration introduces a period of prosperity and progress.

1821. Cuba refuses to join in the general insurrectionary movement of the Spanish American states against the home government, and **remains loyal** during the revolutionary period.

1829. A conspiracy against Spanish authority spreads among the slaves, but the movement is frustrated.

1844. The **negro population** of the island rises in a **general insurrection** which is with difficulty suppressed.

1848. The filibuster, Narciso Lopez, leads an uprising against the government; the insurrection becomes alarming, and 10,000 negroes are killed before the attempted revolution is ended.

1850. Lopez makes a second attempt to overthrow the government; he lands on the island with 600 men, gathered in the United States, but is put down by the authorities. In the following year he returns to Cuba, but is captured and garroted, August 16.

1868. A **revolutionary insurrection** begins, and on October 10, at Manzanillo, the patriots make a declaration of independence. The movement gathers head, and most of the Spanish American republics recognize the Cuban rebels as belligerents. **Guerrilla warfare** follows the suppression of the organized forces of the patriots, and continues for twelve years, under the leadership of Cespedes, who is chosen president of the insurgent government.

1879. A law for the gradual **abolition of slavery** in Cuba is passed by the Spanish Cortes.

1880. The war for independence (beginning in 1868) is ended by the temporary **triumph of the government;** a debt of $85,000,000 is entailed by the conflict.

1886. The final abolition of slavery in Cuba is effected.

1893. The preliminary movements of the **war of revolution** appear in different parts of the island, particularly in the western provinces.

1895. The propaganda for the freedom of Cuba from Spanish dominion begins its work with a general revolt, on February 24, in the provinces of Santiago, Santa Clara and Matanzas. The Spanish government sends 20,000 men, under the command of Field Marshal Campos, to suppress the rebellion. The independence of Cuba is proclaimed on March 25. A provisional government is organized, and General Gomez is appointed commander in chief. On September 23, a constitution is adopted by the revolutionists, and Salvador Cisneros is elected president.

1896. **General Weyler** succeeds Campos in command of the Spanish army. He adopts a policy of cruelty and persecution against the revolutionary party, visiting even the suspected with fire and sword. **Antonio Maceo** becomes commander in chief of the insurgent army, and the revolutionary movement is upheld by his genius until he is ambushed and slain.

1897. The war of the revolution continues; the Spaniards exhibit great ferocity in attempting to suppress the rebellion. The noncombatant inhabitants, under the name of the "**reconcentrados,**" are driven together

Development of the Merchant Marine from the Earliest Phœnician Time.

[In part this picture is supplementary to the picture showing the development of the Navy, as the captain of the early Merchantman was compelled at times to defend his ship and goods from attack.]

1. The Pharos. Lighthouse at Alexandria, Egypt.
2. Egyptian River Boat. Source of reconstruction same as Egyptian Man-of-War.
3. Modern Chinese Junk.
4. Phœnician Fifty Oared Boat. Oars at rest. Vase painting.
5. Greek Merchantman. Open in the middle, showing cabin at bow and stern.
6. Viking Trader. Covered cabin around mast. Decoration on sail Odin's eight-legged horse.
7. The Colossus of Rhodes, (Statue of Apollo) in the distance. Used as a lighthouse. Inserted here to correct the common error, for which there is no authority, that the figure was placed *astride* the entrance to the harbor. It was *beside* the harbor and was one hundred and five feet high, above a lofty pedestal.
8. French Merchantman. Fourteenth century.
9. Hanseatic Merchantman (Kogge). Fourteenth Century. Basket beacon on headland.
10. Venetian Galley.
11. The "Santa María." Flagship of Admiral Christopher Columbus. Decoration on sail F(erdinand) Y(sabell), with the crown and coat of arms of Castile and León between the letters.
12. The "Mayflower." Conveyed Pilgrim Fathers to Plymouth, Mass.
13. American Clipper Ship.
14. The "Clermont." Built by Fulton and used on the Hudson River.
15. The "Savannah." First steamship to cross the Atlantic ocean. The paddle wheels were so arranged as to enable the captain to unship them when the wind was fair.
16. An Ohio or Mississippi River Steamboat. Flat bottom and stern wheel.
17. Modern Five-masted Steel-built Sailing Vessel. Sails hoisted by steam.
18. A Long Island Sound Boat.
19. Grain Elevator. Loading a whaleback.
20. A Whaleback. Latest type of freight carrying steamboat.
21. An Ocean Greyhound. Latest type of ocean passenger and freight steamship.

For description see previous page.

DEVELOPMENT OF THE MERCHANT MA

E FROM THE EARLIEST PHŒNICIAN TIME.

Registered at Stationers' Hall, London, England

in towns and districts, where they perish by thousands. The province of Pinar del Rio is cut off with a barbed-wire barricade, by which means Weyler attempts to circumscribe the insurrection. The government of the United States finds it difficult to prevent volunteering and the furnishing of supplies for the Cuban revolutionists. General Weyler is recalled, and is succeeded by **General Blanco** in command of the Spanish army in Cuba. He mitigates the severe methods of his predecessor.

1898. The relations of the government of the **United States** with Spain, with respect to the Cuban rebellion, become more and more strained. The Spanish government proposes a system of **autonomy,** or home rule, which is regarded by the Cubans as delusive. The ***Maine,*** a battleship of the United States, peaceably at anchor in the harbor of Havana, is mysteriously blown up and destroyed with the instantaneous loss of 266 American seamen, February 15. The government of Spain disclaims all privity to the crime, and offers to arbitrate on the question of damages and reparation. Resentment and suspicion on account of the *Maine,* and a knowledge of the cruelties visited upon the Cuban people, unite to influence public sentiment in the United States. The President sends a special message to Congress, and **war is declared** by that body against Spain. The American fleets under command of Admiral **Sampson** and Commodore **Schley** blockade Cuba and Porto Rico. Admiral Cervera reaches Santiago de Cuba, and is shut up in the harbor by the American squadron. In June, a large American army, under command of General Shafter, is transported to Santiago de Cuba to coöperate with Admiral Sampson and Commodore Schley in the reduction of the place and the capture of the Spanish fleet. The outer defenses of the town are captured after heavy fighting, July 1 and 2. On July 3, the **fleet of Cervera,** attempting to escape, is **wholly destroyed or captured** by the American fleet. On July 14, **Santiago is surrendered,** with all the forces in and around the city. The Spanish cause collapses, and on August 12 **the war ends** with a protocol conceding **the independence of Cuba.**

1901. Constitutional Convention meets in Havana, November 5, 1900–October 3, 1901. It adopts a constitution modeled after that of the United States. Certain provisions are: —

There is to be a Congress of two houses, — the Senate with 4 members from each of 6 provinces, each to serve 8 years; the House of Representatives with one member for every 25,000 inhabitants in each province, each to serve 4 years; Congress is to meet twice a year; the president is elected for four years; a vice president, cabinet, and supreme court are also provided for. The "Platt Amendment" is made a part of the Constitution, June 12; it prohibits Cuba from making with other powers any commercial or financial arrangements that would impair her independence; promises ample sanitary precautions, the leasing or sale to the United States of lands for coaling and naval stations. The Isle of Pines is to be considered outside the constitutional boundaries of Cuba and the title left to future adjustment.

In the election of December 31, 1901, Tomas Estrada **Palma is chosen president.** Between April 1 and October 1, 1901, there are only five deaths from yellow fever in Havana; in 1897 there were 659.

1902. May 5, the **first congress** of the Cuban republic meets at Havana. May 20, Governor Wood, for the United States, transfers the government to Tomas Estrada Palma, who is inaugurated first president. The Cuban constitution, with the Platt amendment, is proclaimed. December 8, the first regular railroad train runs from Havana to Santiago.

1903. A reciprocity treaty with the United States, signed November 11, 1902, is ratified in March by the Senates of Cuba and the United States. The treaty is made effective by the signing of the Cuban reciprocity bill by President Roosevelt on December 17.

1904. Last of American **army of occupation leaves,** February 4.
February 5, a new tariff with higher rates is proclaimed.
The conservatives win in the March elections. There are sensational charges of election frauds at Santiago and other places.
April 27, resignation of Supreme Court judges is requested.
The financial showing of the year is unexpectedly good. The sanitary condition of the cities shows deterioration, but the matter is receiving the careful attention of the government.

1905. March 3, a new cabinet is formed, with Jean Francisco O'Farrell as secretary of state and justice. March 10, Congress adjourns. September 23, the elections result in a victory for President Palma and the Moderate party. During the year the American inhabitants of the Isle of Pines start a movement for annexation to the United States, but this finds no favor at Washington.

1906. May 20, Tomas Estrada Palma is inaugurated president for second term. Liberal party charges fraud and intimidation in elections.
August 20, a **rebellion of Liberals** assumes serious proportions in Pinar del Rio and Havana provinces. August 23, Palma government appeals to United States for aid in suppressing rebellion.
September 13, marines and bluejackets are landed from United States cruiser *Denver* at Havana, but are soon recalled on orders from Washington. September 18, United States Secretary of War Taft and Assistant Secretary of State Bacon land at Havana. September 24, an armistice is declared. September 28, United States troops are landed. September 29, **Secretary Taft** assumes control as **provisional governor,** President Palma and Vice President Capote having resigned and Congress having refused to act towards filling their places. Congress disperses.
October 3, C. E. **Magoon** is appointed **provisional governor.** October 13, Magoon takes over control of island from Taft.

1908. June 24, the Spanish school ship, *Nautilus,* arrives in Havana harbor, the first Spanish war vessel to visit the island since the Spanish American war. August 1, the Conservatives are generally successful at the municipal and provincial elections. There is no disorder.
November 14, at the presidential election the Liberals win a decisive victory, carrying every province and giving General **José Miguel Gomez a large majority** over General Mario Menocal, Conservative. Alfredo Zayas is chosen vice president. The congress will have a large Liberal majority in both branches. On December 24 the formal vote of the electors is unanimous for Gomez and Zayas. The withdrawal of the American troops proceeds rapidly.

1909. January 28, Provisional Governor Magoon transfers his authority to President-elect Gomez, who is at once inaugurated. In March, quickly suppressed insurrection against the new government in Santa Clara province. President Gomez signs a general amnesty bill.

DENMARK.

Denmark as an independent kingdom, though of secondary importance, was of sufficient influence to be recognized at the Treaty of Westphalia. During the Thirty Years' War, Christian IV. had led the Protestants of his kingdom in the contest with the Imperialists, but had been defeated by Wallenstein, and compelled to make a disadvantageous peace. Worsted on the side of the Empire, he was also injured on the side of Sweden, to which kingdom some of his territories were transferred just before the close of the war.

Soon after the Treaty of Westphalia, Charles Gustavus, king of Sweden, made an invasion of Denmark, crossed the Great Belt, and subjugated Holstein. The war continued until 1660, when Denmark purchased peace by the sacrifice of additional territories. This crisis of affairs gave opportunity for constitutional changes by which the relations of the king and the nobility were modified in favor of the former; the elective principle was eliminated from the monarchy, and the hereditary principle was substituted. The Crown was assigned to Frederick III. *and his descendants.*

In the last half of the century the relations of Denmark with Sweden were constantly strained and frequently broken. The reign of Frederick IV. was almost wholly consumed in hostilities. The Danes invaded Holstein, and the Swedes laid siege to Copenhagen. Charles XII. came on the stage, and Denmark was glad to purchase immunity and to give a pledge of neutrality during the invasion of Russia by the Swedes. When misfortune came to Charles in the Ukraine, the Danes rose behind him, and the war continued to the end of his life.

Sweden, virtually ruined by the quixotical expeditions of her hero, was unable after his death to continue the oppression of Denmark, and that country from 1718 to the middle of the century developed both politically and socially. But the progress made in this interval was not as great as was attained in the reign of Frederick V. and that of his successor, Christian VII. This epoch, corresponding to the after half of the eighteenth century, was the period in which three able prime ministers — Count Johann Bernstorff, Count Johann Struensee, and Count Andreas Bernstorff — upheld the rank and extended the influence of Denmark among the nations of Europe.

After this period the kingdom suffered greatly during the Napoleonic ascendency. On two occasions, first in 1801 and again in 1807, war broke out with England. The Danish fleet was almost destroyed within sight of the capital. On the second occasion, Copenhagen was bombarded by the British fleet. These assaults were excused on the ground of the sympathy of the Danish government with Napoleon. By the Treaty of Vienna, in 1815, the condition of the kingdom was seriously impaired. Norway was ceded to Sweden; Denmark was obliged to accept Pomerania instead of her possessions north of the Baltic, and then in lieu of Pomerania she was compelled to content herself with Lauenburg and a subsidy.

It was in this way that Denmark entered into the Germanic confederation, and in this way she became distraught between a German party on the south and a Norse party on the north. Holstein was discontented with her enforced relations with the Danish kingdom. The same feeling existed in Schleswig, which province, though a Norse country, desired admission into the Germanic confederation. The difficulties of the case were aggravated by the law of succession, which was Salic in Schleswig-Holstein, but impartial in the kingdom at large.

The relation of the provinces to the central government became so strained that in 1848 they broke into revolt and appealed to Prussia. The Danes, attempting to uphold their authority, were confronted in Schleswig by a German army. A devastating war was prevented only by the intervention of the foreign powers. At length the German kingdoms of Austria and Prussia abandoned the revolted provinces and gave their sympathy to Denmark in the suppression of the rebellion. Meanwhile, the law of the succession was referred to foreign arbitration, and was decided, in 1852, in a manner equally unsatisfactory to both parties.

Then followed the absorption of Schleswig and the adoption of a new constitution. It was for her refusal to repeal this instrument that Denmark was in 1863–64 invaded by a German army, her strongholds carried, Jutland occupied, and Christian IX. compelled to conclude an inglorious peace by which his rights to the contested duchies were renounced. After these events, however, Denmark entered upon a more prosperous career than might have been anticipated after so great a humiliation.

Government. The executive power in the kingdom is vested in the king and his ministers. The legislative department is the Rigsdag, or Diet, but this body must act in conjunction with the king. The hereditary principle determines the succession. The monarchy is a government of limited powers, and on the whole, the influence of the sovereign is consistent with popular liberty. The present constitution dates from the charter of June 5, 1849. The instrument has been modified three times since it was adopted; namely, in 1855, 1863, and 1866.

The Rigsdag comprises two bodies, called the Landsthing and the Folkething. These constitute a Senate and a House of Representatives. Twelve of the Senators are named for life by the Crown; fifty-four are chosen in an indirect manner by the people; the term of service is eight years. The Folkething consists of 114 members, or representatives, chosen under universal suffrage to serve for a period of three years. The basis of apportionment is one representative to each 10,000 inhabitants. Every male citizen, who has reached his thirtieth year and who is not disqualified for cause, is entitled to vote. The king is assisted in his executive offices by a ministry of eight members. These are: President of the Council and Minister of War and Marine; Minister of Foreign Affairs; Interior; Justice; Finance; Public Instruction and Ecclesiastical Affairs; Agriculture; Public Works.

Industry and Labor. The situation of Denmark suggests the commercial life. The high latitude, reaching 57° 46′ north, and the climatic conditions forbid a high development of agriculture. Such however is the humidity and such the modification of the temperature by the sea, and such the protection of the envelope of fog, that many productions are possible which would not otherwise be expected in a region so far north. The long occupation of the peninsula by a hardy race has resulted in the destruction of the forest and a fair development of the soil. The principal crops are wheat, rye, oats, barley, and buckwheat. The vegetables are those of the north temperate zone. Pasturage abounds, and the production of live stock is one of the principal pursuits.

The Danish fisheries are among the most productive in Europe. All the rivers and fjords abound in valuable fish, of which the most important are the herring, cod, and salmon. Manufactures have, within the present century, made great progress. These comprise silk, linen, cotton, and woolen goods; also leather, lace, gloves, threads, glassware, earthenware, plated wares, weapons, and cutlery. The production of refined sugars has been essayed with success, while soda and potash and malt liquors are produced in abundance. Commerce flourishes. The merchant marine consisted in 1906 of 4,178 vessels of over four tons' burden each, besides nearly a hundred steamships and a great variety of sailing craft. The general condition of the Danish laborer, whether in the commercial, manufacturing, fishing, or agricultural life, is good. Thrift and intelligence are the characteristics of the workingmen.

Religion. The state religion of the kingdom is Lutheran. To this faith the sovereign must belong. The body of doctrine is the same as that which was established before the middle of the sixteenth century. The Danish church is under the superintendence of seven bishops. They have no political status. All other sects and divisions of religious society are tolerated, and civil disabilities on account of religious belief do not exist.

Education. The system of instruction in Denmark provides for the free and compulsory education of the people. The kingdom is well supplied with educational facilities. Most of the higher institutions are of a technical character. There is a Royal Academy at Copenhagen; ninety-nine technical and commercial schools; a veterinary and agricultural college at the capital; fifteen other agricultural or horticultural schools; sixty-seven high schools; thirty-one Latin schools; a college of pharmacy. The University of Copenhagen dates from the year 1479, and has five faculties of instruction, with eighty-five professors and about thirteen hundred students. Men, women and children are admitted to the university.

Defense. The accessible points of the coast are defended with suitable fortifications. All able-bodied men on reaching the age of twenty-two are subject to military service for a period of eight years in the regular army and its reserve and for eight years longer in the extra reserve. This requires a period of drilling, usually of six months; sometimes a second similar period; and also an annual drill of about twenty-five days. The war footing is 50,000 men, the peace footing 14,000, and the annual expenditure for defense is about $3,000,000. The effective fleet comprises 3 monitors, 3 torpedo gunboats and 7 torpedo boats. There are also several other vessels of obsolete design.

The area is 15,592 square miles. By the census of 1906 there were 2,605,258 inhabitants in the kingdom of whom 96.66 per cent were born in Denmark.

1657. Denmark becomes involved in **a war with Sweden.** (See SWEDEN.)
1660. By the peace of Copenhagen, Denmark cedes her territories in the Swedish part of the Scandinavian peninsula. (See SWEDEN.)
1667. Denmark joins in the **treaty of Breda** with England, Holland, and France. At this time Oldenburg is acquired by the king of Denmark.
1679. The **peace of Nimeguen** is signed by Denmark, France, Brandenburg, and Sweden.
1700. Denmark joins with Russia and Poland in a **war against Sweden,** but is forced to make a disadvantageous peace.
1709. The Danes make an **invasion of Sweden,** but are driven out in the following year. (See SWEDEN.)
1713. The Danes with Russian and Saxon allies are victorious at Tönningen. (See SWEDEN.)
1770. Count Johann Bernstorff, the prime minister of Christian VII., is dismissed, and succeeded by Count Struensee, who, two years later, dies on the scaffold.
1773. Denmark relinquishes Oldenburg to the house of Holstein-Gottorp.
1784. Prince Frederick becomes regent for his father, Christian VII.
1808. Frederick succeeds to the throne of Denmark as Frederick VI.
1814. By the treaty of Kiel, Denmark **cedes Norway to Sweden,** January 14, and receives Swedish Pomerania. Helgoland is given up to the English, who cede it to Germany in 1890. (See SWEDEN.)
1839. Frederick VI. is succeeded by Christian VIII.
1848. In January, Christian VIII. is succeeded by his son, Frederick VII. A revolutionary movement in Copenhagen forces Frederick to proclaim the **annexation of Schleswig** to Denmark. This procedure occasions an insurrection in the territory, and a provisional government is set up there. The troops of the **Germanic confederacy and Prussia** now come to the aid of the duchies, and General Wrangel routs the Danes at Schleswig, April 23. The armies of the allies advance to Jutland. By the truce of Malmö a common government is established for the duchies, but in March, 1849, the war again breaks out. The warship *Christian VIII.* is fired by cannonade at Eckernförde, and the frigate *Gefion* is captured on April 5. Düppel is stormed by Bavarians and Saxons, April 13. The **Prussians** under Bonin, with the army of Schleswig-Holstein, **defeat the Danes** at Kolding, April 20, and Fredericia is besieged. On July 10, 1849, a truce is made; this is followed by a peace, in which Germany joins.
1850. A third war is waged by the army of Schleswig-Holstein alone against Denmark. The forces under Willisen are routed at Idstedt on July 24 and 25, and the Danes occupy Schleswig. The Danes are again victorious at Missunde, September 12, and an attack on Fredericia is repulsed, October 4. The command of the army of Schleswig-Holstein is transferred to Horst, but by the intervention of Austria and Germany hostilities are suspended.
1852. The Austrians occupy Holstein, which is delivered to Denmark, on condition that the rights of the duchies be respected. May 8, the five great powers and Sweden make a protocol at London by which Christian of Sonderburg-Glücksburg is made heir to the Danish crown to succeed the childless Frederick VII., and also heir to the sovereignty of the duchies of Schleswig-Holstein.
1863. On March 30, **Denmark incorporates Schleswig** with the kingdom. On November 15, Frederick VII. dies and is succeeded by **Christian IX.,** who proclaims himself duke of Schleswig-Holstein, as Frederick VIII. A new constitution incorporating Schleswig with Denmark is accepted by the king, in Copenhagen. Austria and Prussia demand the repeal of this action, but Denmark refuses to yield. An **Austro-Prussian army,** under Wrangel, Prince Frederick Charles, and Gablenz, **advances into Schleswig,** February 1, 1864. The Danes surrender the Danewerk, February 6.
1864. On April 18, Düppel is stormed and captured by the Prussians. The Danish forces retreat to Alsen, abandoning Fredericia, and the allies occupy a portion of Jutland. On May 12, a truce is established and a peace conference is held in London. Prussia and Austria renounce the London protocol, and the war is renewed, June 26. The Prussians under Frederick Charles make a passage to the island of Alsen and everywhere rout the enemy; all of Jutland is occupied by them. A Prussian fleet under Jachmarn is victorious at Jasmund, March 17, and a fleet of Austrian and Prussian ships under Tegethoff, successful in an engagement at Helgoland, takes the islands off Friedland. Christian IX. makes overtures for peace, and on October 30 the **peace of Vienna** puts an end to the war. The **king of Denmark renounces all rights** to the duchies of Schleswig-Holstein and Lauenburg, in favor of Austria and Prussia; he promises to recognize any government instituted over the duchies by the emperor and king. (See GERMANY and AUSTRIA-HUNGARY.)
1869. The Crown Prince Frederick marries the princess Louisa of Sweden, in July.
1876. An industrial exhibition is held at Aarhuus, Jutland, in July.
1883. A severe **Constitutional crisis** occurs over the power of the king to appoint the members of the ministry irrespective of the majority in the Diet. A German Socialist Congress is held in Copenhagen.
1884. The Constitutional crisis continues, and the elections show large gains for the Liberal party; in the following year the crisis becomes so acute as to threaten a revolution. The opposition majority in the Folkething rises to 80 in a total of 102.
1885. On April 1, a popular demonstration in Copenhagen is suppressed by the police.
1886. The king and the ministers, with only nineteen votes in the lower house, undertake to conduct the government without regard to the legislative majority.
1888. The Constitutional crisis continues, and a deadlock ensues between the executive and legislative departments of the government.
1890. The **conflict between the ministry and the people** regarding the powers of the Folkething, having continued for twenty years, **ceases,** with a few barren concessions by the parties to the controversy; the Irreconcilables of the lower chamber are reduced to the number of ten, and are obliged to yield to the pressure of the Government.
1892. The elections for the Folkething result in the return of a majority for the Government; the Moderate Left or Liberal party gains the ascendency.
1893. **A new agrarian party** is organized in Fünen and Jutland, having for its basis the abolition of protective duties and the emendation of the law relating to agricultural laborers.
1894. In order to preserve the trade of Copenhagen from being diverted by the Eibe ship canal, a free port is opened in that city. On August 7, the Estrup ministry resigns, and the king nominates a new ministry from the conservative party, at the head of which as President of the Council is Baron Reedtz-Thott.
1896. A law is passed to protect the **shore fisheries of Iceland** from the British poachers. Against this measure Great Britain protests, and the difficulty is compromised by a treaty, in August.
1902. The Landsthing rejects the treaty negotiated with the United States authorizing the sale of St. Thomas, St. John, and St. Croix.
1906. January 29, Christian IX., king of Denmark, dies, aged 87 years, after a reign of forty-two years.
January 30, Frederick VIII. proclaimed king.
1907. July 21, the king and some of the ministers and deputies start on a visit to the Faroe Islands and Iceland.
1908. April 14, Parliament adopts a resolution conferring on women taxpayers the right to vote on all matters of local taxation.

ICELAND.

THE important island in the North Atlantic Ocean known as Iceland belongs properly to the western hemisphere. It is situated fully four times as far from the Norwegian coast as from Greenland. Being of a volcanic origin, the coast is irregular and the interior is thrust up into jagged mountains. The scenery is as grand and picturesque as that of any country in the world. The climatic and other peculiar features of the island, such as its lava beds and extinct craters and geysers, need not be described.

The great importance of Iceland as a country lies in the race which has peopled and civilized it. The old Norse stock of mankind is here displayed in its purest and best development. The language and the spirit of the race have opened into a literature as interesting, and in some particulars as meritorious, as any which has been evolved since the ascendency of the Greeks. At a time when America was unknown and when Medieval Europe was still in darkness, poets and story-tellers and historians flourished in Iceland. The art of versification blossomed at a very early age into no fewer than three hundred artistic forms, nearly all of which depended for their vitality upon the principle of alliteration. Poems and that peculiar form of the epic called the *saga* abounded at a time when the old bards of the Provençal had hardly begun to sing, and when English literature was unknown.

The Icelandic sagas still constitute one of the most interesting and important literary mines in the intellectual world. Nor was it the literary evolution only of the Norse race that gave to it its preëminence. The sailors of this stock were the most adventurous of any in the Middle Ages. Only the Italian and Portuguese and Dutch navigators of a later age rivaled the Norse sea kings in their goings forth and discoveries. Already at the close of the tenth century, bands of these hardy buffeters of the sea reached the American shores.

Iceland was colonized by Norse adventurers about the middle of the ninth century. The first permanent settlement is attributed to Ingoff the Norwegian. The petty kingdoms into which Norway was divided were by Harold the Fairhair reduced to one sovereignty under himself and his successors. Soon afterwards, in the reign of King Olaf, the Norwegians were converted to Christianity. An old pagan remnant remained, however, which could hardly be exterminated. They chose exile rather than the acceptance of a new religion. These took to sea and found and colonized Iceland. They organized a secular government about the year 930 A. D. Then an assembly of the pagan chiefs met and founded the *Althing* in the plain of Thingvalla. The government was representative and democratic. There was a national parliament composed of the chiefs, and a president called the Lagmadur. The republic endured a little over three hundred years, and this is the great period in the history of Iceland.

In the year 1000 A. D. Christianity was adopted by the Althing as the religion of the republic. The civil life of the people became active, and political excitement and party divisions were as rife as in the Italian free cities, or the democracies of Greece. It was by taking advantage of these divisions that the Norwegians succeeded in obtaining the sovereignty of the country. In the latter half of the twelfth century, the plague called the Black Death ravaged northern Europe. No country suffered more from the pestilence than Iceland, and a considerable period elapsed before the people recovered their spirits.

A hundred years later a new disaster came in the aggressions of the Danes. The latter first conquered Norway, and then, in 1380, extended their sway over Iceland. This fatal blow at national independence seemed to paralyze the spirit of the people. Their old institutions were suppressed, and their commerce was transferred to foreign vessels. For a long time Iceland remained a scarcely discoverable fact in the history of Europe. A foreign governor from the Danish Court ruled in the name of the king. Not until about the middle of the eighteenth century did the great nations again become aware of the true place of Iceland in modern history. The publication of the Icelandic and Norwegian manuscripts and the explication of the sagas by the antiquaries of Denmark and Sweden revived the interest first of scholars and then of the whole world in the literature and history of the Norse countries.

During the last century Iceland on two occasions came into prominent

historical notice. In 1809, a Danish adventurer named Jörgen Jörgensen made a descent on Reikiavik, the capital, captured the governor, and proclaimed an independent republic. For two months he held possession of the government buildings, from which he issued proclamations and acted the president until the insurrection was put down.

In 1874, the millennial anniversary of Iceland was celebrated with as much *éclat* as the whole population could give to the occasion. The king of Denmark visited the island in person, and was received with enthusiasm. Doctor Isaac I. Hayes and Bayard Taylor, representatives of the American press, were present during the ceremonies, which included a national procession from the capital to Thingvalla, where in the old volcanic amphitheater a session of the ancient Althing was held in imitation of the sittings of that body in the Middle Ages.

The government of Iceland is that of a dependency of Denmark. There is a governor or viceroy sent out from the home kingdom. Legislation is conducted by a national assembly. The judiciary is organized in the manner of most civilized countries. Education is theoretically universal. It has been claimed that all of the native adult male population can read and write.

The area is 39,756 square miles. Population by last census 78,470.

GREENLAND.

It was proved in 1892 by Lieutenant Robert E. Peary that Greenland is an island. Its area is about 850,000 square miles. Hence it is the largest island in the world. Its greatest length is about 1,400 miles. The inhabitants, mostly civilized Eskimos, are supposed to number 12,000.

The first Europeans to touch Greenland were Eric the Red and his band in the tenth century. These people called it Greenland, hoping that an attractive name would draw colonists. A respectable immigration from Iceland followed. Later on it was visited by Davis, Hudson and Baffin, whose names have remained attached to the waters they explored. The Danes landed on the west coast in 1721 and established missions. The more recent explorers have been many, among them Nördenskjöld, Greely, Nansen and Peary.

Most of the country is buried under eternal snow and ice. It is almost everywhere mountainous, but the mountains have been blotted out as the valleys have been filled through the centuries by accumulated masses of snow. Petermann Peak, reckoned as 9,000 feet in height, is the loftiest elevation. Of the thousands of enormous glaciers in Greenland, the largest in the world, the Humboldt glacier, is the vastest with an unbroken ice front of from forty to fifty miles.

Yet along the coast during the summer months there is a profusion of vegetation, and garden vegetables are made to grow in the south. The Royal Danish Greenland Company has a monopoly of trade, a system designed rather for the protection of the natives than for profit.

DANISH WEST INDIES.

Denmark also possesses in the Lesser Antilles the islands of **St. Croix,** 83 square miles, **St. Thomas,** 33 square miles, and **St. John,** 21 square miles, with a total population, mostly negro, of 30,523. After being held at various times by the Dutch, English, Spaniards and French, they passed in 1733 under the control of Denmark. The prosperity of the islands has greatly diminished. Sugar, rum and cattle are still exported.

ECUADOR.

The country now included in the republic of Ecuador has been known in its character and inhabitants from the earliest revelation of the New World. The ancient name of the country was Quito, so called from the Quitus. These people are represented by Velasco and other Spanish historians as being a powerful nation, who held the country from immemorial time, until they were overcome by the Caras in the tenth century. Subsequently, the inhabitants of Quito met the Peruvians in battle, and made a long and courageous fight for independence. The Inca Huayna Capac succeeded in overcoming them, but to make his conquest sure, he took in marriage the daughter of the late king.

In 1533, Quito was conquered by the Spaniards. The country was made a dependency of Peru, and was ruled by an under-president appointed by the viceroy. In 1710, Quito was annexed to the viceroyalty of Santa Fé. In 1722, the dependency to Peru was restored, not to be disturbed until the beginning of the revolutionary period in the first decade of the nineteenth century. The insurrectionary movement consequent upon the downfall of the Spanish monarchy began in this part of South America as early as 1809. Three years afterward there was a general insurrection, but the Spanish governor, aided by forces from Peru, succeeded in putting down the rebellion. The old order was restored for a season, but in 1820, a revolution gathered head at Guayaquil, and to this General Bolivar gave a cordial support. The independence of Colombia had already been secured. For two years a war was waged between the Spanish authorities and the patriots in revolt, but in 1822, the latter gained a great victory on Mount Pichincha. The Spanish governor was soon obliged to capitulate. The victorious patriots immediately entered into union with New Granada and Venezuela, which states had already adopted the republican form of government. This union formed the constitutional basis of the United States of Colombia.

After six years a difficulty occurred between Ecuador and Peru which led to hostilities and to a decisive battle, in which the Ecuadorians were victorious. In 1830, Ecuador seceded from the republican union, and this action was recognized in the following year. The new state took the name of *República del Ecuador*, that is, Republic of the Equator. General J. J. Flores was elected president, and this office he held until 1845. He administered the government like a dictator, but the citizens of the republic at last wearied of arbitrary rule, and, dividing into factions, many took up arms. General Flores was induced to retire from office on a large pension. Subsequently, one administration followed another, with revolution always in the wake. Scarcely any president was permitted to serve out his official term. Meanwhile, in 1859, a war was undertaken with Peru, soon concluded with a treaty. The next president, Dr. Moreno, elected in 1861, was not permitted to serve out his six-year term, but retired from office in 1865. Then came the league of Ecuador with Peru and Chile in a war with Spain. This episode brought the expulsion of most of the adherents of the mother country. General Antonio Flores was an important factor in the history of the time, since he commanded the Ecuadorian army. He continued in public life until 1888, when he was elected to the presidency. The country has been distracted with terrible earthquakes. Save for a revolution in 1906 which deposed the president and for several attempts at assassination of high officers, a degree of political quiet has prevailed during the last decade.

Government; Defense. Ecuador has as its executive a president elected by direct popular vote for four years; with a veto on acts of Congress which is suspensory only; assisted by a cabinet of five ministers, who with seven others form the Council of State. The vice president is elected for four years, but two years after the president, so that he belongs to two successive administrations. Of the two Houses of Congress, the upper consists of senators chosen, two from each province, for four years; and the lower, of deputies chosen for two years, one for each 30,000 inhabitants; voters must be able to read and write. The provinces are under governors appointed by the central authority. A nominal equality of all classes before the law does not prevent the practical subjection of the Indians to a state bordering on slavery. There is an army of about 4,200 men, with a national guard of 90,000.

Religion; Education. Roman Catholicism is the state religion and supported by government. Primary education is nominally free and compulsory. There is a university at Quito, 9 schools for higher education, 35 secondary and 1,088 elementary schools. There are several normal schools, in which are a dozen teachers from the United States.

Industry and Labor. The leading production and export is cocoa; after this come coffee, sugar, and rice. Gold is abundant, and silver, copper, and iron are also plentiful. Petroleum is found in large quantities, but the oil industry is almost undeveloped.

The area is 116,000 square miles. The population is estimated at about 1,200,000.

1533. Kingdom of Quito is conquered by the Spaniards and made a dependency of Peru.
1822. After years of intermittent rebellion independence is secured. As Ecuador, the country forms a union with New Granada and Venezuela, but resumes independence in 1830.
1830–60. General J. J. Flores, by turns dictator and exile, chief figure in the state.
1875. President Moreno is assassinated.
1888. After years of revolutions and civil wars Don Antonio Flores is inaugurated president.
1902. July 16, a great fire destroys Guayaquil; loss $5,000,000.
1904. January 22, Ecuador and Peru agree to arbitrate disputes.
1906. January 6, a revolution breaks out. January 20, President Lizardo Garcia is deposed and General Alfaro is proclaimed president.
1908. June 18, the railroad is completed, connecting Quito and Guayaquil.

FRANCE.

France at the middle of the seventeenth century held easily the first rank among the powers of Europe. England, before her Revolution of 1640, had remained an insular kingdom. Spain, which had been first in influence and aggressive force, had declined rapidly after the age of Charles V. and Philip II. Germany, owing to the peculiar character of her people and institutions, was still a chaotic assemblage of kingdoms and principalities, the major part of which were feebly bound in union by the fiction of a traditional empire. Only France was a consolidated unit of race and institutions, showing forth the spirit of nationality and employing the agencies and methods of a great modern state.

At the time of the treaty of Westphalia, Louis XIV. was but ten years of age. He and his kingdom were represented at the conference at Osnabrück by Cardinal Mazarin. Thirteen years afterward, on the death of Mazarin, he began his autocratic rule. Succeeding to the throne in 1643 on his father's death, he died in 1715. He was called the "Grand Monarch" and his reign of 72 years is not only the longest but one of the most interesting in the annals of mankind.

At the time of the settlement of the questions growing out of the long-continued religious wars, Louis was hardly sufficiently mature to realize the comparatively insignificant results of the conflict as it respected his own kingdom. France obtained only minor advantages. Only the cession of Alsace was really valuable from an historical point of view.

The age of Louis XIV. was one of astonishing activities and glory, but of little substantial achievement. The manner of the king in administration and war resembled a royal parade and spectacle. The results of such a government, judged by the severe standard of history, could not promote substantial nationality or really conduce to the general interests of civilization. Near the conclusion of the reign it could but be seen that the military power and prestige of the monarchy were waning. As for the literary splendor and artistic fame of the period, these also are now recognized to have been coincidences with the early part of his reign rather than results of his influence.

The reign of Louis XIV. was not unmarked by achievements. Personally, the monarch was of a proud and arrogant nature. He showed his capacity for government in surrounding himself from the first with the ablest and most ambitious men of the kingdom. Colbert, the banker statesman, was placed at the head of the Department of Finance. Turenne and Condé were chosen as commanders of the French armies. Louvois, Noailles, Villars, and Tallard came afterwards. Great intrigues belonged to this epoch, as for example, the revocation of the Edict of Nantes in 1685,—with the almost fatal loss to France of its Huguenot element, — the scheme for placing the king's grandson on the throne of Spain, the constant correspondence with the English Jacobites, and many other national and international machinations. Battles were fought and some victories won by the king's armies, but the age was on the whole an era of proclamations and pageantry rather than of great deeds and substantial progress.

The consequences of this method were quickly shown in the history of France. The kingdom became either stationary or retrogressive. During the first half of the eighteenth century, both the monarchy and the nation looked backward rather than forward for their ideals and types of superiority. On the whole, the English power in combination with that of the Netherlands gained greatly in the latter part of the reign of Louis XIV., and this gain was increased during the entire reign of his successor.

Louis XV., great-grandson of the Grand Monarch, came to the throne in 1715. To his reign belonged one of the most extraordinary transformations which have been witnessed in modern times. Under the governmental system of Louis XIV., marked as it was with extraordinary pretensions, the French *people* were suppressed and overridden to an intolerable degree by the personal will and inordinate ambitions of the king. This condition was exactly

reversed in the times of his successor. Under Louis XV. the *government* of France, losing its pretensions, became weak and contemptible, but at the same time the French *nation* began to manifest its power and genius as never before.

The whole history of the reign of Louis XV. may be comprehended in an account of the sudden flowering of the French mind and its brilliant ascendency over the intellect of Europe. Never before in modern times did the mind display its powers with such strength and audacity. While the state lay dormant the intellect became active and excursive. It took on a mood of attack and assailed not only the political but the whole social and religious structure of the age. A new learning came; a new science and a new philosophy led the way into hitherto unexplored fields of inquiry. The extant order of society and state were subjected to a cruel analysis which could but result in their overthrow.

Never before were coming events, political, social, and religious, so clearly foreshadowed in the current movements of the human intellect as in the first three quarters of the eighteenth century in France. Nearly all the prevailing opinions were assailed and many were extinguished. In their stead came new ideas and ideals. The most radical forms of thought were affected by the philosophers; nothing was too audacious to be advanced and defended as though it were truth already demonstrated in human experience. Free thought clashed with all the despotic conditions of society. The customs and traditions of a thousand years were openly set at naught. The new opinions sought expression in the literature of the age. While statesmen and soldiers were asleep in cabinet and barrack, the Encyclopedists were awake with a new effervescent philosophy.

The epoch of governmental lethargy and of intellectual freedom in France was almost coincident with the reign of the fifteenth Louis. That reign ended with the king's life on the tenth of May, 1774. Louis XVI. acceded to the throne on the death of his grandfather coincidently with the first movements of our American rebellion against the mother country. The new sovereign failed to apprehend the great changes which were impending in his kingdom. Neither he nor the French aristocracy could discover or understand that a new era was about to begin.

During the first thirteen years of the new reign, the old methods of government and society were accepted as though they were eternal. On the contrary, those methods were already at an end. They had been destroyed by the slow-moving forces of history, and it remained only to recognize and accept the change. The French monarchy could not recognize and accept. Since it could not, it must be done away. The great Revolution came on mildly at first, as though it would accomplish its results by substituting humane sentiments for aristocratic arrogance and military despotism. Its force increased with the resistance which it encountered. The existing feudal institutions and a hundred medieval social traditions stood in the way.

The attack upon these traditions and effete social forms was redoubled as the obstacles were multiplied. The violence of the movement became greater and greater until the old landmarks were swept away. The ancient régime ceased. A new society sprang up among the ruins of the overthrown order. The royal family was either destroyed or scattered in flight. There was an age of abolition in which the ancient institutions of France were obliterated and replaced with a new system, the roots of which reached as far as the philosophical speculations and dreams of Voltaire and Rousseau.

The events of the French Revolution need not be recapitulated. The revolutionary government under the First Republic was perhaps the most violent expression of passion and reform which has ever been witnessed. Gradually the frenzy of the age subsided, or was rather impersonated in a single character which appeared in a dramatic manner at the close of the century. Napoleon Bonaparte as a military hero gathered up the enthusiasm of the preceding decennium and directed it with tremendous effect against the enemies of Revolutionary France.

The ascendency of Napoleon was coincident with the first years of the nineteenth century. Few men in history have left so deep a trace in the records of an age as did Napoleon. He built a military empire on the ruins of a Republic of which he proclaimed himself the offspring. He struck the hereditary monarchies of Europe an almost fatal blow. These, however, were enabled, taking advantage of the inevitable reaction against the personal sway of the French Emperor, to rally against him and by a united effort to destroy his power. The Empire was swept away at Waterloo. The military leadership of Europe went to England. In France a dull reaction ensued, but the traditions of the Empire, of its achievements and glories, remain.

In 1815 the House of Bourbon was restored to as much of its forfeited inheritance as still existed; most of that inheritance had passed away. The remnant was left to Louis XVIII., who was reseated by the allies on the throne of his ancestors. The movement had neither vitality nor honor. The restoration was effected without enthusiasm or hope on the part of the French people. The reigns of Louis XVIII. and his brother Charles X. could be but interludes between the past and the future. The whole interval was only of fifteen years' duration. Then came the Revolution of 1830, the expulsion of Charles X., and the substitution of a modified, half-popular constitutionalism for the traditional and reactionary system of the restoration.

Louis Philippe, whose father had been sent to the guillotine by the revolutionary tribunal of 1793, came to the throne as King of the French, and in a reign of eighteen years did much for the welfare of the people. The Citizen King was tolerated by the nation until it wearied of his platitudes of liberty and sought the reality by the revolution of 1848. The praise of this convulsion is that it was bloodless, and that the Orleans dynasty accepted its fate as if half reconciled thereto. The short-lived Second Republic coming afterward was made a stepping-stone by Louis Napoleon Bonaparte on which he mounted to empire.

The temper of France at the middle of the century showed itself to be imperial, and the *coup d'état* of Napoleon III. was ratified with almost as much unanimity and enthusiasm as had been manifested towards the first Emperor. For eighteen years the second Bonaparte ruled France partly by diplomacy and partly by military power. His court became the most splendid in Europe, nor can it be denied that after the Crimean war, and the opening of the Suez Canal, and the international exposition of 1867, his prestige was greater than that of any other sovereign of the times.

We need not in this connection remark upon the miscarriages of Napoleon III., and upon his supreme mistake in engaging the German race in battle. To challenge Germany under the leadership of King William of Prussia was an act as rash as it was costly.

The Franco-Prussian war of 1870 was one of the briefest, bloodiest, and most decisive conflicts of modern times. The leadership of Continental Europe was in a single year transferred from Paris to Berlin. The restoration of the German Empire, which had been in abeyance and virtual extinction for sixty-four years, was sudden and marvelous. The revelation of German nationality was one of the most striking facts in the history of the nineteenth century. The catastrophe came with the great battle of Sedan, the defeat of France, and the tremendous revulsion against Napoleon III. and his system. Both were swept away.

Though the Empire was overthrown in 1870, political drifting sums up French history during the next few years. Not until January 30, 1875, did the National Assembly by a majority of one vote recognize the Republic as the definite government of France. Overcoming opposition and surviving dangers from without and from within, the French Republic has demonstrated its right to existence. It has sometimes been intolerant, more than once it has shown itself as despotic as the imperial and royal systems it succeeded, and, without engaging in any European war, it has enormously increased the public debt. But in the main it has embodied the dominant sentiment of the country: it has not been altogether without glory, and it has become stronger with the passing of time. Already its years are more than those of the two Empires combined or of the three reigns of Louis XVIII., Charles X. and Louis Philippe.

Government. The Constitution of France does not consist of a single document, submitted and approved in its entirety, but of a succession of laws, adopted at long intervals. The first law in the Constitution was approved on February 25, 1875. The Republic is based on universal manhood suffrage. The people elect the National Assembly — the Chamber of Deputies, now numbering 584, by direct vote for a four years' term; and the Senate, of 300 members, through electoral colleges, for nine years, one third retiring every three years. The Assembly thus constituted elects the President of the Republic for a seven years' term. The President appoints the President of the Council, who is the Prime Minister, and who in concert with him chooses the other members of the Council, which constitutes the responsible Ministry, and is dependent on the support of the Chambers. The ministry, as now composed, consists of: the Minister of the Interior; Minister of Finance; War; Justice and Public Worship; Marine; Colonies; Public Instruction; Foreign Affairs; Commerce, Industry, and Posts and Telegraphs; Agriculture; Public Works; Labor.

The system is a kind of mixture of the English and American plans. As in the United States, there is a president elected for a fixed term; while, as in England, most of the real executive power is delegated by the nominal head to a Ministry, which stands or falls as it can command a legislative majority. In point of fact, the composition of parties in France is so unstable that the shifting of legislative majorities and consequent changes of ministry are far more frequent than in England.

The unit of local government is the Commune, which varies in size. In the whole country there are 36,222 communes. Each commune elects a Municipal Council, and this Council elects a Mayor. A number of Communes, twelve on an average, are grouped in a Canton; several Cantons make up a District or Arrondissement (Paris, however, is divided into 20 Arrondissements); a group of Arrondissements constitute a Department; and of these Departments there are 86 or 87 in France. But through all this symmetrical gradation the strong hand of the central government is felt. Even the local Mayor is its agent, and the Prefect at the head of each Department and the Sub-Prefect over every Arrondissement are the all-powerful representatives of the Executive at Paris. Paris itself has a Mayor for each of its 20 Arrondissements, while the place of Mayor of the city is taken by the Prefects of the Seine and of Police. The large centralization of governmental power in a single head has been characteristic of France, alike as monarchy, empire, and republic; and the power of the people manifests itself in a frequent change of the head, whether by revolution or under constitutional forms, rather than by a distribution of authority among many individuals and bodies, as in the English-speaking nations.

Industry and Labor. The industries of France are still in a large degree agricultural, more than two thirds of the whole area being under cultivation. As in most other countries of modern times, the ratio of agriculturists to those engaged in other industries has been decreasing since the middle of the last century. At that time there were nearly twice as many of the people engaged in the cultivation of the soil as in all other pursuits together; but manufactures, commerce, and the liberal professions have gained upon the simpler pursuit to a great degree. The soil of France, however, by its rich and varied quality still demands and rewards the labor of her people in the production of nearly all the vegetables, grains, and fruits of the North Temperate Zone. Vineyards abound in seventy-six of the departments. The citrus fruits are among the leading products. The beet industry has occupied a considerable per cent of the population since the first decade of the nineteenth century.

French manufactures are among the finest and most profitable in the world. In them more than thirty per cent of the people are engaged. The handiwork of the French has been immemorially celebrated. To the present day, labor-saving machinery has not encroached upon the work of the hand in French factories as seriously as in other countries. In the making of textile fabrics, however, machinery has taken the place of primary skill, and by this means, in the manufacture of silk and cotton goods, the establishments of France have still held their place in competition for the foremost rank. The great silk factories of St. Étienne, Lyons, Avignon, Nimes, and Tours are still the best of their kind in existence. In the manufacture of embroideries, of fine china ware, of tapestries, and of jewelry and bronze goods France competes with the nations on more than even terms. The woolen manufacture is also important, as is that of cotton and linen fabrics.

The exports of the country are chiefly silk, manufactured goods, wines, brandies, leather, bronze, steel, iron wares, paper, refined sugar, china and porcelain. The manufacturing cities of France are superior in social and civic character to the corresponding cities in other countries.

The industrial condition of France is a matter of constant concern to the government. The fact that four departments, out of the twelve represented in the French cabinet, have to do with industrial questions shows the pre-eminent importance of industry in the consideration of the Republic.

The general condition of the laborer in France is superior to the corresponding condition of the laborer in any other country of Europe. As a result, there is no exodus of French workingmen from their own country. Of these very few ever go abroad. The French laborer, though a peasant, is generally a small landowner. One of the beneficent results of the great Revolution was the breaking up of consolidated landownership, and the creation of more than four millions of small owning, most of which have survived the consolidating tendency of this age. The French laborer is generally contented and happy. If he be prosperous, he has his own house and vineyard. He retains to a passionate degree his patriotic devotion to France and her institutions.

Religion. The position to which France as a nation has generally inclined has been that of liberal Catholicism. In the eighteenth century the close alliance between a corrupt monarchy and the Church, and the spread of radical

unbelief, caused the Revolution to spend a part of its first fury against not only the Church but Christianity itself. The policy of Napoleon, and the Catholic belief, still deeply inherent in the people, combined to restore an alliance between Church and state. One of the watchwords of the restoration and reaction in 1815 was "to strengthen the altar and the throne." After various fluctuations, the policy of France under the Republic was to secularize the state, but to make a grant of funds to any sect numbering 100,000 adherents. The Roman Catholic Church, the Protestants both of the Reformed or Calvinist church and of the Lutheran or Augsburg confession, and the Jewish Religious Community all received these grants. But by the law of 1905 all the communions were put upon the voluntary or self-supporting basis, the state paying no more stipends except that clergy over 45 years of age or who had served over 25 years were to receive a grant for a time.

Education. During the Republic a very large number of laws regarding education have been passed, the main object of many of which was to control rather than to develop. It has been the endeavor to take all instruction out of the hands of religious orders and to employ only teachers from the laity. The French system contemplates primary, secondary, and higher education. The expense of the public school system in 1908 was 271,066,206 francs. Only the state can confer degrees. In 1906 there were 68,445 public and 13,492 private elementary schools. Of the secondary institutions there were in 1907 for boys 609 with 64,575 pupils and for girls 171 with 34,262 pupils. The higher institutions are almost without number and comprehend all subjects of research. The technical schools of Paris are numerous and among the finest in the world. At Paris the schools of Medicine and Law, of Pharmacy, and the Sorbonne have been enlarged and their equipment enriched. In the country are 13 faculties of Law, 7 faculties of Medicine, 15 faculties of Science and 15 faculties of Letters. The Collège de France, which Francis I. founded in 1530, has 49 courses of the highest study.

Defense. France has a coast line of 1,760 miles on the Atlantic and the Mediterranean, and a land frontier of 1,575 miles touching the borders of Belgium, Germany, Switzerland, Italy and Spain. An army and navy and internal fortifications of the first class are of prime necessity. The necessity may be deplored, but it none the less exists and the nation does its best to meet it. Paris is the center of defense, and along the boundaries is a scientific succession of the strongest fortifications. The standing army in 1908 on a peace footing contained 604,359 men. It is asserted that France can put into the field a fully equipped, well-drilled, well-officered force of 1,290,000 soldiers. It is claimed that nearly twice as many men can be called upon in desperate emergency, but, before they could be put in action, the war would probably be decided.

On December 1, 1907, the French navy in tonnage ranked third of the navies of the world, having a tonnage of 609,079 tons as against the 1,633,116 tons of the navy of Great Britain. When the ships building at that date are completed, it will have a tonnage of 836,112, including a considerable proportion of the modern type of heavy battleships, armed, however, principally with 9.4 in. guns. Reckoning effective ships only, it consisted in 1908 of 30 battleships (6 building), 52 cruisers (3 building), 14 torpedo gunboats, 61 destroyers (4 building), 41 torpedo boats of the first class and 270 of the second class (20 building) and 49 submarines (39 building).

The area of France is 207,654 square miles. The population in 1906 was 39,252,245.

1648. The **civil wars of the Fronde** distract France; an insurrection occurs in Paris against **Mazarin**, and the faction of the people and of the parliament constructs barricades, August 27. In the following year the forces of the court besiege Paris and an adjustment of the difficulties is effected.

1650. The leaders of the opposition to the French court, Condé and Conti, and the Duke of Longueville, are seized and imprisoned by the direction of Mazarin. Two years afterward, the Fronde makes another campaign, but the faction, overcome by the forces of Turenne, collapses; Condé goes over to the service of Spain.

1658. **France**, associated with **England** in a war against **Spain** (see GREAT BRITAIN), defeats the Spanish troops at the Dunes and captures **Dunkirk**, which is transferred to **England**.

1659. By the **peace of the Pyrenees** the war with Spain ends (see GREAT BRITAIN); France receives a portion of the Spanish Netherlands and Roussillon.

1660. **Louis XIV.** marries **Maria Theresa**, daughter of Philip IV. of Spain.

1661. Cardinal Mazarin dies and Colbert succeeds him as chief adviser of the sovereign.

1664. The French **East India company** is established.

1666. The French **Academy of Sciences** is founded.

1667. The marriage of Louis XIV. with the daughter of Philip IV. of Spain affords him a pretext for a **series of wars** directed to the acquirement of the **sovereignty of Spain.** These wars continue for about half a century; their final result is the exhaustion of France.

1668. On the death of Philip, Louis XIV., acting in the name of his wife, sets up a claim to Flanders. A **Triple Alliance** is formed by England, Holland, and Sweden against France. Louis occupies Franche-Comté. The treaty of Aix-la-Chapelle ends the struggle; France yields Franche-Comté to Spain; other concessions are made to the Netherlands.

1670. Louis XIV. makes a **secret treaty with Charles II.** of England and then occupies Lorraine.

1672. England joins France in a declaration of **war against Holland.** In the following year Frederick William of Brandenberg signs a treaty of neutrality, and France takes possession of Maestricht and Treves. In Holland, however, France is unsuccessful, and Spain joins in resisting the new encroachments of Louis.

1674. The French once more occupy Franche-Comté, whereupon the **German empire** declares **war.** The battle of Seneffe is fought August 11, between Condé and William of Orange. An army under Turenne lays waste the Palatinate and triumphs over the imperial forces sent to meet it.

1675. Turenne gains the decisive **battle of Türkheim.**

1676. Dutch fleet is overcome, in April, by Duquesne off coast of Sicily.

1677. **William of Orange** is **defeated** in Flanders, in April, and Freiburg is captured by the French.

1678. **A treaty of peace** with Holland and Spain is signed at Nimeguen by which France obtains Franche-Comté and a part of Flanders. The right of France to Alsace is confirmed.

1681. Louis occupies Strassburg and attempts to take Luxemburg.

1682. A declaration of the French clergy, drawn by **Bossuet**, and signed by the king, makes a bold affirmation of the **liberties of the Gallican church** and confirms the earlier pragmatic sanction.
The French fleet bombards Algiers, and in 1683 the attack is repeated.

1683. Louis makes an invasion of the **Spanish Netherlands** and in the following year he obtains the mastery of Luxemburg.

1684. Extraordinary efforts to convert Huguenots; persecution follows.

1685. The king **revokes the Edict of Nantes**, having completed, as is alleged, the conversion of the Huguenots, especially by quartering soldiers on them (the Dragonnades); 300,000 persons leave France to escape the violence of their enemies.

1686. Louis joins with Victor Amadeus of Savoy in a sanguinary crusade against the sect in Piedmont known as the **Waldenses.**

1689. Louis makes a declaration of **war against England** in order to support the pretensions of the exiled James II.; at the same time he sends an army to devastate the Palatinate.

1690. A body of French troops, sent with James to Ireland, is **routed at the Boyne**, July 12. The French are more successful in encounters with the Duke of Savoy, who has declared war, but they are overcome by the forces of Prince Eugene.

1692. Allied Dutch and English defeat French fleet off the fort of **La Hogue.**

1697. Louis is compelled to sign the **treaty of Ryswick**, September 20; he yields the larger part of his conquests and officially recognizes William of Orange as the English sovereign.

1700. Charles II. of Spain dies, having named as his heir Philip of Anjou, grandson of Louis XIV. The other powers, however, object to the sovereignty of Philip; in the following year England, Holland, Germany, and Austria form the **Grand Alliance against France;** France once more declares in favor of James II. for the English throne.

1701. **Prince Eugene** is at first successful over the French; he captures the French general Villeroi at Cremona, but his victorious career is soon checked.

1704. An insurrection breaking out in 1702 among the Protestants of Cévennes, known as the **war of the Camisards,** is suppressed after much fighting, accompanied with the utmost cruelty on both sides and the loss of 100,000 lives.
The English under Marlborough with the forces of Prince Eugene defeat the French at **Blenheim** (August 13); Louis loses Bavaria.

1706. Marlborough defeats Villeroi at **Ramillies** (May 23); the Spanish Netherlands are lost to France. The siege of Turin by the French is raised by Prince Eugene, and the conquests of France in Italy are given up. The allies invade France and lay siege to Toulon.

1707. A French fleet is dispatched to enforce the claims of the Pretender James, but it is cut off and forced to abandon the attempt by the English under Admiral Byng.

1708. The allied armies of Marlborough and Prince Eugene overcome the French at **Oudenarde** (July 11) and capture Lille.

1709. Marshal Villars leads the French to a battle with the allies at **Malplaquet** (September 11), where he loses 8,000 men; the loss of the allies is 20,000. The allies, however, remain the possessors of the field and advance to the capture of Mons.

1710. In Spain, Charles of Austria has been placed on the throne by the allies; the Duke of Vendôme defeats Charles and restores the crown to Philip of Anjou, the grandson of Louis. In the following year, October 8, England consents to a truce.

1712. Germany continues the war, but Villars is able to repulse the army of Prince Eugene.

1713. **A general treaty of peace** is signed at Utrecht, April 11. Louis renounces all claims to the crown of Spain and declares that he will no longer aid the Pretender in his claims to the English throne; he closes the harbor of Dunkirk and signs a treaty for the regulation of commerce with England and Holland; he cedes Acadia to England.

1715. **Louis XIV. dies**, September 1; **Louis XV.**, his great-grandson, succeeds to the throne, with Philip, duke of Orleans, as regent.

1716. **John Law** establishes his bank in Paris under the protection of the regent, by which the national debt is to be paid off. The shares rise to a value twenty times that of all the specie current in France in 1719; the scheme collapses in 1720 and causes general bankruptcy.

1717. A **Triple Alliance** is formed by France, Great Britain, and Holland.

1718. Spain invades Sicily; as a result, France, Great Britain, Holland, and Austria form a **Quadruple Alliance**, and the fleet of Spain is defeated off Cape Passaro.

1719. The French under Berwick make an attack on Spain. (See SPAIN).

1723. The Duke of Orleans, the regent, dies, and the Duke of Bourbon becomes prime minister.

1726. **Cardinal Fleury** takes the conduct of affairs and introduces a policy of caution, by which, in 1729, the treaty of Seville is made with Spain and England.

1733. Louis XV., having married the daughter of Stanislas Leszczynski, who has been elected king of Poland but is driven out of the country by the Russians, becomes involved in the war of **the Polish succession.** The German emperor supports Russia, and Spain and Sardinia join France; the theater of war is Germany and Italy.

1734. The French under Berwick besiege Philippsburg; Berwick falls, but the fortress is forced to yield.

1735. By a preliminary treaty signed at **Vienna**, Augustus III. is recognized as king of Poland, but Stanislas is granted the succession to the duchy of Lorraine; Lorraine is to pass to France on his death. Two years later he comes into possession of the duchy.

1738. By the treaty of Vienna, in November, the provisions of the preliminary treaty are confirmed.

1741. France takes up arms in the **war of the Austrian succession.** Bavaria is invaded and Prague falls, November 26.

1742. The army under Belleisle is forced to withdraw from Prague, and in 1743 the English defeat the French under Noailles at Dettingen, June 27.

1744. The French, in alliance with Spain, overcome Charles Emanuel III. of Sardinia, near Coni.

1745. **Marshal Saxe** defeats the allied English, Hanoverians, Dutch, and Austrians, at **Fontenoy**, May 11.

1746. After conquering the chief towns of the Austrian Netherlands, Saxe again routs the allies at the battle of Raucoux, October 11.

1747. The English triumph over the French fleet off Cape Finisterre, but Saxe defeats the Duke of Cumberland at Lawfeld, July 2. The French fleet is vanquished by Admiral Hawke, off Belleisle.

1748. Maestricht is captured by Saxe, and the war ends with the **peace of Aix-la-Chapelle**, October 18; the general result of the war to France is loss of prestige without territorial advantage.

1754. The **French Indian war** against the British colonies in **America** begins, having for its principal object the extension of the influence of France in America, but resulting in the ascendency of England. (See UNITED STATES.)

1756. The **French** attack Minorca and rout Admiral Byng in May, the island surrendering in the following month.
France forms an **alliance with Austria** against **Frederick the Great** of Germany, at Versailles, in May. The Seven Years' war begins, with Prussia, England, part of Hanover, and some of the smaller German states arrayed against France, Saxony, Russia, Sweden, and at a later date, Spain.
1758. The French are driven from Hanover by Ferdinand of Brunswick and are beaten by him at Crefeld, June 23. The French are led by Lally to the capture of Arcot and to a siege of Madras; the siege ends in failure in 1759.
1759. The French are again routed by Ferdinand, at Minden, August 1; and by the English in the Bay of Lagos, in the same month. The English also take Guadeloupe from France. In America the French yield Fort Ticonderoga, Crown Point, and Fort Niagara. General Wolfe invades Canada, and **Quebec is taken,** September 12.
1761. Belleisle is taken by the English. In this year an **alliance** for mutual protection is made by **the Bourbon princes of Europe,** negotiated by Choiseul, in August.
1762. After the conquest of Martinique by the British, preliminaries of peace are arranged at Fontainebleau, November 3.
1763. **The peace of Paris** is signed by England, France, Spain, and Portugal, February 10. Canada, with Prince Edward Island and Cape Breton, the territory east of the Mississippi, and the islands of Dominica, St. Vincent, and Tobago are ceded to England, and Louisiana to Spain. France receives Martinique, Guadeloupe, Santa Lucia, Pondicherry and Goree, while yielding to England Minorca and the settlement on the Senegal.
1764. By the suggestion of Choiseul, the king orders the **suppression** of the order of the **Jesuits** in France.
1766. By the death of Stanislas Leszczynski, Lorraine reverts to France. Two years later Corsica is ceded to France by Genoa.
1774. **Louis XV. dies,** May 10; he is succeeded by his grandson, **Louis XVI.** Maurepas becomes minister of state and Turgot minister of finance. In the following year the king appoints Jacques Necker minister of finance.
1778. France recognizes the **independence of the United States,** in January, and concludes a treaty of friendship and commerce with the commissioners of the States (Franklin, Deane, and Lee) in February. In July the French fleet enters Delaware Bay. War is declared against England, July 10.
1779. The French fleet, aided by the Spanish flotilla, undertakes a blockade of Gibraltar; three years later a great bombardment of the fortress occurs, September 13; the garrison repulses the attack.
1781. Necker resigns his portfolio, in May.
1783. The **peace of Versailles** is signed, September 3, by France, Great Britain, the United States, and Spain; Great Britain recognizes the independence of the United States and cedes Tobago to France.
Charles Alexandre de Calonne is made minister of finance.
1788. Necker is restored to office.
1789. The **States-General meet** at Versailles, May 5. The deputies of the Third Estate, or the people, in distinction from the nobility and the clergy, constitute themselves **the National Assembly,** June 17; numbers of the nobility and clergy become identified with this body. The king orders the dissolution of the body, but the assembly, under the guidance of Mirabeau, refuses obedience June 23. The two upper orders join the Third Estate by command of King Louis, June 27. July 11, Necker is dismissed; the national guard is formed.
These measures fail to check the revolution; on July 14, the mobs **storm the Bastile** and destroy it. On July 15, **Lafayette** is made commander of the national guard. The nobles begin to flee from the dangers of the insurrection. The king recalls Necker to office.
On August 4, the assembly abolishes all the rights and privileges known as feudal, and in the same month a **declaration of the Rights of Man** is adopted. The assembly then (September) decrees that the legislative power shall be vested in a single chamber of deputies; in the following month Louis accepts the decree of the assembly. On October 5 the people of Paris, in insurrection, march to Versailles. The assembly, with the king, now removes to Paris; it is decreed that church property be confiscated for the uses of the state, November 2.
1790. In January, France is divided into departments. The **law of primogeniture** in connection with inheritance is **repealed** in February; in June all **titles** and other formal usages of the aristocracy are **abolished.** July 12, the constitution of the clergy is made secular and a festival in celebration of the federation occurs in Paris, July 14. In September, Necker is finally dismissed and the ancient parliament is suppressed. An issue of **assignats** or paper money based on the land confiscated from the church follows.
1791. The **king** and his family make an attempt to **escape from France,** June 20; they are intercepted at Varennes, on the next day, and forced to return. On September 3 the assembly completes the constitution, and on September 14 the king makes oath of loyalty to its provisions. In this month the assembly also decrees the incorporation of Avignon and Venaissin with France. On September 30 the Constituent Assembly holds its last session, and the **Legislative Assembly** convenes, October 1.
An **insurrection** occurs in **Haiti;** the negro slaves arm against the whites to secure the emancipation decreed by the French assembly, May 15.
1792. The property of the emigrants (Les Emigrés) is confiscated in February. In March, Louis XVI. forms a Girondist ministry. The king is compelled to make a **declaration of war against Austria,** April 20, and the forces of France and Austria engage in Flanders. Austria is joined by Prussia, other German states, and Sardinia; the Duke of Brunswick issues an intolerant manifesto, July 25.
The municipal government of Paris forms an insurrectionary commune, August 10; the mobs attack the Tuileries and **massacre the Swiss guard.** Three days later the royal family is imprisoned. A revolutionary tribunal is established by the **Jacobins,** August 17.
The Duke of Brunswick, with an army of Prussians and Austrians, invades France in August. A royalist rising takes place in the western part of France; it soon fails; the **prison massacres** in Paris begin, September 2. On September 20, Kellermann, at the head of the French army, gains a victory over the forces of the Duke of Brunswick at Valmy. On September 21 the National Convention replaces the Legislative Assembly, and the next day the republican Year One of the **New French era begins.**
The French take possession of Chambéry and Nice, in September; **Custine** leads a triumphant advance into Germany, in September and October. The **Austrians are beaten by Dumouriez** at Jemappes, November 6, and the French occupy Belgium. Savoy is annexed in November. On December 11, King Louis XVI. is placed on trial by the revolutionists; he is convicted and condemned to the guillotine.
1793. The **king is put to death,** January 21; England, Austria, Prussia, the German empire, Spain, Naples, and Holland, with other lesser states, forthwith form a **coalition against France.** The revolutionists establish a new Tribunal of Justice, in March. Danton, Marat, and Robespierre institute **the Reign of Terror.** A powerful royalist rising occurs in the Vendée, in March. Dumouriez is routed by the Austrian army at Neerwinden, March 18; he deserts to the enemy, and France loses Belgium. The Committee of Public Safety is instituted, April 6. A force from Spain makes a campaign in Roussillon, in April; a revolt in Corsica breaks out in May. The Girondists fall from power, June 2. The royalists in the Vendée win victories at Saumur, June 9 and 10. Marat is assassinated by Charlotte Corday, July 13. Mentz, captured by Custine in the preceding year, surrenders to the Prussians, July 23. The English force Toulon to capitulate, August 27, but the army of the Duke of York is routed in Flanders, in September.
The convention on September 17 enacts the **Law of the Suspected.** The revolutionary calendar prepared by Romme is instituted, October 5. The forces of the convention distinguish the month by fearful slaughters at Lyons and other places in the South. The German allies break through the lines at Weissenburg, in October, but the lines are reëstablished in December. The Austrians are routed by Jourdan at Wattignies, October 15 and 16. **Marie Antoinette is executed,** October 16, and on October 21 the Girondist representatives are slain.
Philippe Egalité is executed, November 6. The worship of Reason is now instituted by a decree of the convention, November 10. The loyalists of the Vendée are overcome at Le Mans, in December, and Toulon is taken from the English, December 19. In this engagement **Napoleon Bonaparte** commands the artillery. Carrier commits the atrocities at Nantes, called the *Noyades.* The blacks in Haiti are declared by the convention's commissioners to be free.
1794. Danton and his associates, together with Camille Desmoulins, are put to death, April 5. The English fleet defeats the French on June 1, but Jourdan is victorious at Fleurus over the Austrians, June 26. Belgium is now conquered by the French. **Robespierre falls,** July 27, and the **Reign of Terror** comes to an **end.** Robespierre and his companions are put to death, July 28. The Spaniards are beaten, August 1, at Fuenterrabia.
Corsica becomes independent by the aid of the English, in August, but a campaign made by Jourdan on the Rhine is successful.
Pichegru invades Holland, and in January of the following year the country is subdued.
1795. An insurrection in Paris against the convention occurs, April 1 (12th Germinal). **Peace** is concluded between **France** and **Prussia,** on April 5; the Prussian territories on the west side of the Rhine are left in the possession of France. A second rising against the convention occurs in Paris, May 20 (1st Prairial). A rising of the royalists occurs on October 5, but the convention is protected by Napoleon Bonaparte (4th Vendémiaire), who **suppresses the mob and restores order** in the capital.
A body of the Emigrants land at Quiberon, to join forces with the insurgent loyalists known as **Chouans,** in June, but their plans fail. Spain and France make the treaty of Basel, in July. **The Constitution of the Year III.** is formally adopted, August 22.
An invasion of Germany is made in September by the armies of Jourdan and Pichegru. October 26, the convention closes its sessions. The council of Ancients and the council of Five Hundred hold their first session, October 28. **The Directory,** an executive of five members, is established, November 1. The Institute of France is founded.
1796. General **Napoleon Bonaparte** is put in command of the **army of Italy.** The Vendean leader, Charette, is executed, in March. General Bonaparte defeats the Austrians and Sardinians at Montenotte, Millesimo, Dego, and Mondovi. The Austrians are again conquered at Lodi, May 10, and in the same month Bonaparte marches into Milan. The armies of Jourdan and Moreau begin a campaign against Germany and Austria; in July and September the smaller German states abandon their struggle with the French Republic.
Bonaparte triumphs over the army of Wurmser at Lonato, August 3, and again at Castiglione, August 5. The royalist disturbances in the Vendée are finally quieted, in August, by General Hoche. Jourdan, however, is defeated by the Archduke Charles, at Würzburg, September 3. On this day and the following the Austrians are defeated by Bonaparte at Roveredo. Bonaparte overcomes Wurmser at Bassano, September 8, and enters Mantua. Spain declares war with England, while Ferdinand IV. of Naples makes peace with France, in October. In the same month Moreau makes a skillful retreat from the Rhine, and Bonaparte overwhelms the Austrians under Alvinczy at Arcole, November 15–17. In December, France sends an expedition to Ireland.
1797. The Austrians under Alvinczy are again routed at Rivoli, January 14, and Mantua surrenders in the following month. In February, Bonaparte enters the territories of Pius VII., and on February 19 the pope signs the peace of Tolentino. In March, Bonaparte makes an **invasion of Austria** and compels the forces of the Archduke Charles to retire; on April 18 Charles agrees to the peace of Leoben. The Venetian republic also yields, and in May the French occupy Venice. In June the Ligurian republic is formed. On September 4 (18th Fructidor), the majority of the directory execute a *coup d'état* over the royalist section of that body. The peace of Campoformio is signed between France and Austria, October 17, by which Austria gives up her possessions in Belgium and Lombardy, but receives a large part of the Venetian dominions. France receives the Ionian Islands. Bonaparte returns to Paris, in December.
1798. The French occupy Rome, and the **Roman republic** is proclaimed in February. Switzerland is revolutionized and the **Helvetic republic** is constituted in April, Geneva being added to France.
In May, General Bonaparte sets out on an **expedition to Egypt.** In the following month he dispossesses the Knights of St. John and occupies Malta. In July he reaches Alexandria and overcomes the Mamelukes in the battle of the Pyramids, July 21. The French fleet is, however, destroyed by Lord Nelson at Aboukir, in the **battle of the Nile,** August 1 and 2. In September, Turkey declares war against France. In December, Russia and England form an alliance. Charles Emmanuel IV. of Sardinia is forced to yield Piedmont to the French.
1799. Naples is reduced by the French, and the Parthenopean republic is proclaimed, in January. The Russians and Turks, however, seize the fortress of Corfu, in March. War against Austria is declared in the same month, and the Archduke Charles defeats Jourdan at Stockach. The Russian and Austrian allies under the command of Suvarov overwhelm Moreau at Cassano, April 27. Suvarov wins another victory, June 17 to 19, and the Parthenopean republic expires. Ferdinand is again set on his throne, and a Neapolitan army marches into Rome, in July. At Novi, Suvarov wins another victory over the combined troops of Joubert and Moreau, August 15, where Joubert falls on the field. Korsakov is defeated by Masséna, at

Zürich, September 25 and 26. Suvarov marches into Switzerland, but beats a retreat, in October. An expedition sent by Russia and England into the Netherlands fails.

In February, Bonaparte enters upon a **campaign in Syria.** Gaza falls, February 25, and on March 7 Jaffa is attacked. He also lays siege to Acre, but soon abandons it and retreats toward Egypt, in May. On July 25 he defeats the Turks at Aboukir and then sets out to return to France, August 22. General Kléber remains in command of the army in Egypt.

A *coup d'état* against the Directory is undertaken by Bonaparte, November 9 (18th Brumaire). The council of Five Hundred is dispersed by force, November 10; Bonaparte, Sieyès, and Ducos are declared provisional consuls. The **consulate** is proclaimed December 24, the three members being Napoleon, Cambacérès, and Lebrun, appointed for ten years. **Bonaparte** has the dignity of **First Consul.**

1800. The Chouans make their submission. Moreau's army defeats the Austrians at Mösskirch and Biberach, in May. In the same month Bonaparte leads his forces over the Great St. Bernard. The Genoese surrender to Austria in June, but the Austrians are defeated by Napoleon at **Marengo,** June 14. Malta, however, falls into the hands of the English, in September. The Austrians under the Archduke John are again defeated at **Hohenlinden,** December 3. On December 24, an endeavor to destroy Napoleon by means of an infernal machine fails. Spain makes cession of Louisiana to France.

1801. The **Emperor of Austria** makes **peace with Napoleon** at Lunéville, February 9, and the stipulations of the peace of Campoformio are confirmed. All of Germany west of the Rhine is yielded to France, and the Holy Roman Empire is dismembered.

Sir Ralph Abercromby defeats the French at Alexandria, March 21. The treaty of Madrid between France and Spain is signed on the same day; by its provisions Parma, Piacenza, Guastalla are apportioned to France, to be possessed on the death of the reigning duke. In return, Tuscany, now occupied by the French, is to become the kingdom of Etruria under the rule of Don Luis, the duke's son. In March, a treaty of peace is made between France and Naples, and on July 15 Bonaparte concludes a concordat with Pope Pius VII.

France is forced to withdraw from Egypt, and a preliminary treaty of peace with England is promulgated in October. In the same month a treaty with Russia is made. Bonaparte sends an expedition under Leclerc to subdue **Toussaint L'Ouverture,** the black governor and hero of Haiti.

1802. The Cisalpine republic is reconstituted; Bonaparte becomes president of the Italian republic. On March 27, the **peace of Amiens** is signed between France, Spain, and the Batavian republic on the one part and Great Britain on the other. By this treaty England consents to recognize the changes in the governmental structure of Europe that have been wrought by France. In June a treaty of peace with Turkey is signed, and on August 2 Napoleon is declared Consul for Life. In September, Piedmont is united to France; a rebellion that has broken out in Switzerland is subdued by French troops. In Haiti, Toussaint L'Ouverture is captured by treachery and brought to France and imprisoned until his death in the dungeon of Joux, April 27, 1803.

The Legion of Honor is instituted.

1803. On February 19, Bonaparte reorganizes the Swiss confederacy. In May, **England again declares war.** Hanover is occupied by the French a month later. In Haiti the blacks succeed in driving the French from the island.

1804. In February and March a conspiracy against Napoleon is discovered in France, and Moreau, Pichegru, and Cadoudal are placed under arrest. On March 21, the civil code of the French (**Code Napoléon**) is published. Napoleon orders the execution of the Duke of Enghien, and the condemned man is shot at Vincennes. An English attack on the French fleet in the harbor of Boulogne-sur-Mer is defeated in April; a second attempt in October is equally unsuccessful.

On May 18, Napoleon is proclaimed **emperor of the French,** and on December 2, Pope Pius VII. officiates at the coronation of Napoleon and Josephine in Paris.

1805. In March, Napoleon proclaims himself **king of Italy.** In the same month England, Austria, Sweden, and Russia make an **alliance against France,** but the states of South Germany take the side of Bonaparte. France annexes the Ligurian republic in June. In that month, also, Eugène Beauharnais, stepson of Napoleon, is made viceroy of Italy. Bavaria is invaded by the Austrians, in September, and the French make the crossing of the Rhine. October 20, the Austrian army of General Mack surrenders to Napoleon at Ulm. **Nelson,** however, vanquishes the allied fleets of the French and Spanish at **Trafalgar,** a day later, though Nelson himself is slain. In this month the Austrians under the Archduke Charles are victorious over Masséna, at Caldiero, but the Austrians beat a retreat. Vienna is occupied by Murat, November 13, and Napoleon at **Austerlitz** defeats the combined armies of Austria and Russia commanded by the two sovereigns, Francis and Alexander, December 2. A convention is made with Prussia by which that nation cedes Anspach, Baireuth, Cleves, and Neufchâtel, but is permitted to receive Hanover, December 15.

The **peace of Pressburg** is signed by France and Austria, December 26. By its provisions Austria yields up her Venetian territories to the Italian kingdom, and Bavaria receives the Tyrol. The Breisgau and other regions in Suabia are added to Baden, Württemberg, and Bavaria. Austria receives Salzburg, while Augsburg is annexed to Bavaria.

1806. The Holy Roman Empire is extinguished by Napoleon.

Maximilian I. of Bavaria and Frederick I. of Württemberg are proclaimed kings.

1807. The allied Prussians and Russians meet the French in the **battle of Eylau,** February 7 and 8, but the result is indecisive. In May, the French capture Dantzic, and Bonaparte triumphs over the Russians at **Friedland,** June 14. Napoleon and Alexander thereupon meet for a conference on a raft on the Niemen, and the outcome is the **treaty of Tilsit,** which is signed July 7. Prussia agrees to the terms of peace two days later. By the stipulations Prussia gives up her territories west of the Elbe and her dominions of recent acquisition in Poland, from which Napoleon forms the duchy of Warsaw, which he confers on Frederick Augustus of Saxony. In August, he creates the kingdom of **Westphalia,** of which his brother, Jerome, is declared king. Napoleon now seizes the possessions of the Swedes in Germany. The English bombard Copenhagen, September 2 to 5. Junot leads an invasion of Portugal in November; the Portuguese court leaves the kingdom. Napoleon takes possession of the kingdom of Etruria in December and issues the Berlin decree against British commerce.

1808. The French occupy Rome, in February, and in March, **Murat** marches into Madrid. In April, Bonaparte adds the papal states to his Italian kingdom. In May, Ferdinand VII. and his father, Charles IV. of Spain, after a conference with Napoleon at Bayonne, renounce their claims to the Spanish throne. Napoleon's brother, **Joseph,** is forthwith proclaimed **king of Spain,** June 6. In July, however, General Dupont surrenders his army to the Spaniards at Baylen. August 1, Joachim Murat, Napoleon's brother-in-law, is proclaimed king of Naples, with the title Joachim I. **Arthur Wellesley,** afterward duke of Wellington, begins a campaign against the French in Portugal. The siege of Saragossa is given over by the French; on August 21, Junot's forces are routed by Wellesley at Vimeiro, and on August 30 Junot agrees to evacuate Portugal.

In September and October, Napoleon has conferences at Erfurt with Alexander I. In December, Madrid capitulates to the French.

1809. **Austria** once more **takes up the conflict** with Napoleon; in April, her armies make campaigns in Bavaria and Warsaw, but they are overcome by Napoleon at Abensberg, Landshut, and Eckmühl. On May 3, Russia declares war on Austria, and the French emperor enters Vienna, May 13. The battles of Aspern and Essling are fought, May 21 and 22, and the army of the Archduke Charles gains an advantage over the forces of Napoleon. The Austrians are, however, defeated at Raab by Beauharnais, June 14. On July 6, Napoleon is victorious over the Austrians at **Wagram,** and on July 12 an armistice is signed at Znaim. The **peace of Schönbrunn** follows, October 14, afterward ratified in Vienna. The countries surrendered to France are constituted the dominion of the Illyrian provinces.

In May, Bonaparte decrees the formal annexation of the estates of the pope to the French empire. This is followed in the next month by the excommunication of the emperor by Pius VII. Napoleon thereupon orders the arrest of the pontiff and his imprisonment in France.

In December, the Empress **Josephine is divorced.**

1810. In April, Napoleon espouses **Maria Louisa,** daughter of the emperor Francis I. of Austria. He annexes Holland in July. In the same month the French army captures Ciudad Rodrigo. At Busaco, Masséna is repulsed by Wellesley, now the duke of Wellington.

September 27, **Wellington** retires beyond the lines of **Torres Vedras.** In October, the French annex Bremen, Hamburg, and Lübeck. Mauritius is taken by the English.

1811. In March, Masséna is forced to retreat from Portugal, but Badajoz surrenders to the French army. In May, Masséna is defeated by Wellington at Fuentes de Onoro, and Soult is overcome at Albuera, May 16.

1812. Valencia is captured in January by Suchet. In the same month Wellington besieges Ciudad Rodrigo, and in April he **storms Badajoz.** On July 22 he defeats Marmont near Salamanca, and in August the English soldiers enter Madrid. The siege of Burgos, in September and October, is, however, unsuccessful.

On June 22, Napoleon declares **war against Russia,** and the grand army moves to the invasion of the czar's territories. The Russians are beaten at Smolensk and the city is burned, in August. The force of Kutuzoff is routed by the French at Borodino (the Moskwa), September 7, and on September 15 the French enter **Moscow** in triumph. The city is **set on fire** and the French retreat. The Beresina is passed, November 26 to 28; Bonaparte leaves the army and hastens to Paris, where he arrives in December.

1813. The **German nations now rally** and take up arms against France. The Russians form an alliance with the Prussians at Kalisz, in February, and the Swedish army is treacherously arrayed against Napoleon by **Bernadotte,** his former marshal, now king of Sweden. On May 2, the French emperor triumphs over the allied Russians and Prussians at Lützen and again at Bautzen, May 20 and 21. On August 12, Austria declares war against France. Bülow's division of the army of Bernadotte defeats the troops of Oudinot at Grossbeeren, August 23. Macdonald is beaten by Blücher on the Katzbach, August 26. Napoleon wins at Dresden in a battle with the division of Prince Schwarzenberg, August 26 and 27. The French under Vandamme surrender at Culm, August 30, and Ney is defeated by Bülow at Dennewitz, September 6. At the **battle of Leipzig,** October 16, 18, and 19, Napoleon's army is routed by the allies under the command of Prince Schwarzenberg, with Blücher, Bernadotte, and Benningsen commanding divisions. The king of Saxony is taken prisoner by the allies.

The defeat of the French leads to the dissolution of the Confederation of the Rhine, and the kingdom of Westphalia is abolished. Napoleon orders his forces to retreat from the Rhine, and his army in Holland is forced to withdraw. On June 21, the French are overcome at Vittoria by Wellington, and Soult is defeated by the English general in the Pyrenees in the following month. **Wellington** passes over the Bidassoa, in October, and **pursues the French** into their own territory.

1814. **France is invaded by the allies;** in January, Murat deserts the French cause and intrigues with the enemies of Napoleon. A congress is held at Châtillon, in February; the sittings continue into March; at this congress the allies confer with the French, but no settlement is reached. Napoleon wins expensive victories over **Blücher** at Champaubert, Montmirail, Château-Thierry, and Vauchamps, and over Prince Schwarzenberg at Montereau, in February. Soult, however, is defeated by Wellington at Orthez, on February 27, and on March 9 Blücher drives back the French at Laon. In the same month the French troops withdraw from the papal states, and on March 7 Ferdinand VII. is set at liberty.

The French are overcome at Arcis-sur-Aube, March 20 and 21, by Prince Schwarzenberg, and **the allies besiege Paris.**

Montmartre is stormed, March 30, and on the following day **the allies make their entry** into the French capital. The French Senate under the direction of Talleyrand establishes a provisional government, April 1. Soult is defeated by Wellington, at Toulouse, April 10; a day later **Napoleon abdicates** at Fontainebleau.

In Italy, Beauharnais makes an effort to oppose the Austrians, but is totally defeated and makes a convention with his conquerors, April 16.

Louis XVIII., the brother of Louis XVI., is recalled to be **king of France** by the action of the Senate and the allies; he enters Paris with all solemnity, May 3; this is the first restoration. On the day following **Napoleon** lands at Elba, whither he **is banished.**

The **peace of Paris** is made with the allies, May 30, and on June 4 Louis proclaims the constitutional charter.

A congress of all the European powers assembles at Vienna in order to reorganize the political structure of the Continent, November 3.

1815. While the congress at Vienna is yet in session, **Napoleon escapes from Elba,** February 26, and lands in France, March 1. On March 13 Ney passes over to the support of Napoleon and carries with him the army. Louis XVIII. flees from Paris, March 20, and on the same day Napoleon enters the capital in triumph.

The alliance of the powers against him is at once renewed; Murat, however, takes up the cause of Napoleon, but he is defeated by the Austrians at Tolentino, May 2 and 3. On June 9, the general acts of the **congress at**

Vienna are signed, and by these provisions **France** is permitted to retain the limits possessed by her at the beginning of the revolution. On June 16, Napoleon defeats Blücher at Ligny. But on the same day Ney is worsted at Quatre Bras, and on June 18 Napoleon is overwhelmed at **Waterloo** by the forces of Wellington and Blücher. The Empire is extinguished and the emperor abdicates for the second time, at Fontainebleau, June 22; on July 7, the allies enter Paris.

Louis XVIII. makes a second entry into the capital, July 8, the date of the **second restoration.** On July 15, Napoleon throws himself on the generosity of the English nation; he is put in charge of the captain of the *Bellerophon* and transferred to St. Helena, October 16. Murat leads an expedition into Calabria to gain possession of the kingdom of Naples, but his schemes fail and he is taken and shot by the order of a court-martial, October 13. **The second peace of Paris** is signed, November 20; on December 7, Marshal Ney is executed.

1818. A **congress of the great Powers** is held at Aix-la-Chapelle, and soon afterward the armies of the allies are withdrawn from France. In December of this year the king dismisses the Richelieu ministry, and the administration is intrusted to the Duke Decazes.

1820. The hostility to the Bourbon family is defiantly shown by the **assassination of the Duke of Berry,** the king's nephew, on whom the succession depends. The duke dies, February 14. Decazes is dismissed and Richelieu is restored to the premiership, but he in turn is succeeded by Villèle.

1821. **Napoleon dies** at St. Helena, May 5.

1823. A **French army is sent to Spain** to restore the authority of Ferdinand VII. Under the Duke of Angoulême the forces enter Madrid, in May, and the king of Spain is reëstablished on the throne.

1824. **Louis XVIII. dies,** September 16, and is succeeded by his brother, **Charles X.**

1825. The government of France decrees an indemnity of 1,000,000,000 francs to the Emigrés, and recognizes the independence of Haiti.

1828. The ministry of Villèle terminates and is succeeded by those of Martignac and Polignac.

1830. The French begin the **conquest of Algeria,** and in July the army under General Bourmont captures Algiers. The king proclaims a number of unconstitutional ordinances, dissolving the chamber and suppressing the public journals, July 26. This procedure is followed by a **revolution in Paris,** July 27 to 29, in which the Bourbons are overthrown. Charles X. abdicates, August 2, and makes his escape from France. August 7, the chambers declare for **Louis Philippe,** duke of Orleans; two days later he is crowned as king of the French.

1831. Louis Philippe appoints Casimir-Périer prime minister, in March. Riots occur among the silk weavers in Lyons; the legislature abolishes the hereditary peerage.

1832. **Soult** forms a **coalition ministry** (which includes among its members Thiers and Guizot) in October.

Austria threatens France and occupies Bologna; to offset this France occupies the citadel of Ancona for six years.

1834. Peace is established with **Abd-el-Kadir,** the emir of Mascara, in February; an insurrection in Lyons and riotings in the capital occur. A quadruple alliance is formed by France, England, Spain, and Portugal.

1835. The French declare war against Abd-el-Kadir, and Clausel captures and burns Mascara.

1836. In February, a cabinet is formed by Louis Adolphe Thiers. In August, **Thiers** resigns and the premiership is given to Molé. **Louis Napoleon Bonaparte** makes a futile attempt to start a revolution in his own favor. In January of this year, Clausel leads the French in a successful attack on Tlemçen, but his forces are defeated by Abd-el-Kadir, in April. Bugeaud wins a victory on the Sikkak, in July. An expedition against Constantine, undertaken by Clausel, fails.

1837. In May, a peace is concluded with Abd-el-Kadir. In October, another attack on Constantine is made under General Valée.

1839. The Molé ministry goes out in March, and two months later Soult becomes premier. Abd-el-Kadir breaks his compact, and another war results in which he gains the advantage.

1840. Thiers again forms a ministry, in March. In August, Louis Napoleon makes an attempt at Boulogne to incite an insurrection in his support, but his plans fail and he is arrested and imprisoned in the castle of Ham. In October, the cabinet resigns, and Soult again becomes premier, with **Guizot** as minister of foreign affairs. The remains of the Emperor Napoleon, who died at St. Helena, May 5, 1821, are brought to Paris and interred under the dome of the Invalides.

1842. The fortifications of Paris are begun by the order of Louis Philippe. Mascara yields to the attacks of the French.

The Duke of Orleans is killed accidentally, July 13. A campaign in Algeria results in success for the French.

1844. The French are victorious over Abd-el-Kadir, and Bugeaud defeats his ally Abderrahman, of Morocco, on the river Isly, August 14. The Prince de Joinville bombards Mogador, on August 15, and the emperor makes peace. A **treaty** is made **with China.**

1845. General Pelissier suffocates a large number of Kabyles in a cavern at Dahra. France unites with England in a war against Rosas, the dictator of the Argentine Republic.

1846. The Duke de Montpensier, youngest son of Louis Philippe, weds Louisa of Spain.

1847. Soult resigns the premiership, in September, and is succeeded by Guizot. At the close of the year Abd-el-Kadir surrenders himself to General Lamoricière.

1848. On February 22, **riotings** occur in **Paris,** occasioned by the widespread hostility to the government; on the following day a number of violent encounters take place between the people and the military. Guizot is dismissed, and a new ministry is formed by Thiers. February 24, the efforts of the revolutionary insurgents are crowned with success, and **Louis Philippe abdicates** the throne. A provisional government is established, in which the principal members are Dupont, De l'Eure, Lamartine, Ledru-Rollin, Arago, Garnier-Pagès, and Crémieux. Three days later the Second Republic is formally proclaimed. In the following month a workingmen's convention assembles in Paris, over which **Louis Blanc** presides. On April 27, slavery in the colonies of France is abolished, and on May 4 the constituent assembly sits. On May 15, there are riotings in Paris. In June, **General Cavaignac** is chosen as chief of the executive, and a republican constitution is adopted on November 4. On December 10, **Louis Napoleon Bonaparte,** nephew of Napoleon I., is elected **president** of the republic.

1849. The original assembly is dissolved, and a new legislative assembly meets in May; a Bonapartist ministry is appointed, October 13. A French expedition is sent to the aid of Pope Pius IX. (See ITALY.)

1851. The President Louis Napoleon, on December 2, executes a **coup d'état.** He dissolves the legislative assembly and establishes himself as dictator in France. On December 21, he secures his election to the presidency for a term of ten years by a *plébiscite,* or popular vote.

1852. In January, the property of the house of Orleans is confiscated. The question of converting the republic into an empire is submitted to a popular vote, and on December 2, Louis Napoleon is proclaimed **emperor of the French,** with the style **Napoleon III.**

1853. France joins England in the contest against Russia known as the **Crimean war** to repel that power on the Black Sea. (See RUSSIA.)

Napoleon III. marries the Spanish countess **Eugénie de Montijo.**

1855. The first **French international exhibition** is held in Paris.

1858. Orsini makes an attempt to assassinate the emperor Napoleon III., January 14. Napoleon meets the Count **Cavour** of Sardinia at Plombières, in July. A war against Anam is undertaken.

1859. The **emperor** joins **Victor Emmanuel** in a war **against Austria** (see ITALY); Italy cedes Nice and Savoy to France.

1860. The privileges of the legislative body are much increased by concessions of Napoleon III. France joins England against China; the Chinese are compelled to observe the treaties they have made.

1862. Lower Cochin China is ceded to France by Anam.

1863. **War** having been declared **against Mexico** in the preceding year, General Forey leads a French force against Puebla. The city is captured, and on June 10, the French enter the capital. (See MEXICO.)

1864. A convention is made with Italy, whereby France agrees to withdraw her forces from the papal states after two years.

1867. The French extend their dominion in Cochin China. An **expedition** is sent **against Garibaldi** at Cività Vecchia, in October. (See ITALY.)

1869. Many **reforms** in the **French constitution** are made.

1870. The ministry of Ollivier begins, January 2. Napoleon III. submits new laws of importance, and a *plébiscite* is held, May 8. On May 15, the Duke of Gramont is made minister of foreign affairs.

It is decided in Spain to offer the crown to Prince Leopold of Hohenzollern, July 2. A protest against this nomination is made in the French assembly by the Duke of Gramont, on July 6. An open rupture with Prussia follows, on July 13. On July 19, **France declares war,** and on August 2, the advanced forces of the two countries meet at Saarbrück. Two days later the Germans win the battle of Weissenburg and **Marshal MacMahon** is defeated by **Frederick William,** the crown prince of Prussia, at **Wörth,** August 6. On the same day the French under Frossard are overcome at Spichern. These disasters are followed by the resignation of the Ollivier ministry. Another battle, disastrous to the French, is fought at Courcelles, August 14, and the French under Marshal Bazaine encounter the Germans under Prince Frederick Charles at Mars-la-Tour, August 16. Bazaine is defeated at **Gravelotte,** August 18, by the united troops of Prince Frederick Charles and General Von Steinmetz. MacMahon suffers a defeat at Beaumont, August 30. He and the Emperor in person are finally vanquished at **Sedan,** September 1, by Frederick William and the Prince Albert Frederick of Saxony. On the following day his army surrenders and Napoleon III. is made a prisoner by King William and his generals. In Paris the catastrophe results in the **proclamation of a republic;** a temporary government for the defense of the nation is established, September 4. On September 19, Paris is surrounded by hostile forces and a siege of the capital begins. Toul surrenders September 23 and Strassburg five days later. On September 30, General Vinoy makes a sortie from Paris, and Gambetta gets out of the city and makes a proclamation from Tours, October 9. On October 11, Von der Tann occupies Orleans. On October 27, Metz yields and Bazaine surrenders to Prince Frederick Charles. Le Bourget is occupied by the defenders of the capital on October 28. Revolutionary outbreaks occur in Paris. On November 9, at the battle of Coulmiers, Aurelle de Paladines compels Von der Tann to fall back, but, on November 28, is defeated at Beaune-la-Rolande. On November 30, Ducrot makes a desperate effort to break through the enemy's lines about Paris. Aurelle is beaten at Orleans by the forces of the Grand Duke of Mecklenburg and Prince Frederick Charles, December 2 to 4; the Germans at once reoccupy the city. On December 6 Rouen is garrisoned by the army. Pfalzburg yields, on December 12. On December 23 Faidherbe is defeated at Pont-Noyelles, and five days afterward the batteries of the Germans open on Paris. Bourbaki, however, forces Von Werder to withdraw from Dijon.

1871. The Germans at Bapaume are attacked, in January, by Faidherbe, but his effort is unsuccessful, and Prince Frederick Charles gains a victory over Chanzy at Le Mans, January 10 to 12. Bourbaki makes an attack on Von Werder at Héricourt, and fails, January 15 to 17. On January 19 Trochu makes a sortie from Mont Valérien. Von Goeben totally defeats the troops of Faidherbe, at St.-Quentin. On January 28 **Paris capitulates,** and a temporary armistice is signed. Bourbaki retreats into Switzerland. A national assembly is elected, February 8, and the assembly begins its sessions at Bourdeaux, February 12. Four days later Belfort capitulates. On February 17, **Thiers** is chosen as chief of the executive. The preliminary **treaty of Versailles** is signed by France and Germany, February 26, and on March 1, it is ratified by the French assembly. Alsace, German Lorraine and Metz are ceded to Germany. On March 1, the Germans make a triumphal entry into the French capital. March 18, two days before the meeting of the assembly at Versailles, the **war of the Commune** breaks out. The Red Republicans make themselves masters of Paris, and another epoch of confusion and slaughter ensues. Marshal MacMahon is made commander of the military forces of the government, and three days later active operations against the communists in Paris are begun. May 9, Fort Issy is seized. The definitive treaty of peace with Germany is signed at Frankfort, May 10. The forces of the republican government occupy Fort Vanves, May 14, and enter Paris, May 21. Montmartre yields, May 23, and on the following day the communists burn the public buildings of the city; Archbishop Darboy and other hostages are slaughtered. May 27, Père Lachaise is captured, and on the following day the **strife is ended.** On June 8, the national assembly repeals the act of proscription directed against the princes of Orleans and Bourbon. On August 31 Thiers is elected president of the republic.

1873. Thiers resigns the presidency and is succeeded by **Marshal MacMahon,** May 24. On September 16, the evacuation of France by the German troops is completed. November 19, the term of MacMahon's presidency is fixed by the assembly at seven years. Marshal Bazaine is tried on a charge of treason, and is found guilty.

1875. A national legislative body composed of a senate and a chamber of deputies is created by vote of the assembly.

1878. An international exhibition of arts and industries is held at Paris.

1880. On March 19, the **Ferry educational bill** becomes a law, and on March

30, the Freycinet cabinet publishes an ordinance against the Jesuits. On July 10, amnesty is granted to the communists. In September, **Jules Ferry**, on the resignation of the Freycinet ministry, forms a cabinet. The Society Islands are annexed to France.

1881. France fits out an **expedition** in April **against Tunis** to inflict chastisement on the Krumirs; a treaty is made with the dey by which a French protectorate over Tunis is established, May 12. A bloody affray occurs in Marseilles between Italians and Frenchmen, June 19. An insurrection breaks out in Tunis in June; Sfax is occupied by the French. On October 26, Kairwan is seized. In November the ministry of Ferry resigns, and Léon Gambetta forms a cabinet.

1882. The control of Egyptian finances by the French and English is in a great measure done away. (See EGYPT.) **Gambetta** resigns and is succeeded by Freycinet as premier, in January. At this time the French republic plans to secure the delta of the Sang-koi, in Tonquin, in the interests of the commerce of France. To this end an expedition undertakes the conquest of the "Black Flags," a piratical remnant of Chinese rebellion. In April the citadel of Hanoi is occupied by a force under Rivière. The Black Flags are supported by Anam in their resistance of the French. In July the ministry of Freycinet resigns and Duclerc becomes premier. Duclerc, in turn, resigns in January of the following year, to be succeeded by Fallières, and a month later Fallières gives place to Ferry.

1883. In March, the Anamese attempt to storm Hanoi, but are repulsed. On May 19, Rivière is surprised by a force of the Black Flags, and his soldiers are defeated; he is slain. The French fleet under Courbet proceeds to bombard the fortifications of Anam at the mouth of the Hué, August 18 to 20. Five days later Anam accepts the proffered terms of peace with France. By the treaty a **French protectorate over Anam** is created. On December 17, the French become masters of Sontay. Meantime they make **aggressions in Madagascar;** on June 13, Admiral Pierre bombards Tamatave.

1884. Bac-ninh, near Hanoi, is captured by General Millot, March 12 On June 23, the Chinese make an attack on the French at Langson, in Tonquin, near the frontier of China, and war between France and China is declared in August. On August 23 the arsenal at Fuchau is destroyed by Courbet, and an expedition moves against Formosa. In Madagascar the war is continued. In France there is a revision of the constitution, in August.

1885. In March the French are defeated at Tonquin. In the following month, on the resignation of Ferry, Brisson becomes premier. **Peace with China** is made, June 9, but the French are again attacked at Hué in the following month. At the end of the year a peace with Madagascar is signed; the government of **Madagascar** consents to the setting up of a **French protectorate.** On December 28, **Jules Grévy** is elected president of the French republic; the cabinet of Brisson resigns.

1886. In January, Freycinet again becomes premier. The legislative body decrees **the exile of the Orléans** princes and the **Bonapartes;** Freycinet resigns, to be succeeded by Goblet in December.

1887. In May, Goblet resigns and Rouvier forms a cabinet. Rouvier goes out in November, and this is followed, December 2, by the resignation of President Grévy. December 3, **Marie François Sadi-Carnot is elected** to the presidency, and Tirard becomes premier.

1888. France is agitated by a disturbance following the lead of **General Boulanger,** a new constitution being demanded. Tirard resigns in March, and a month later Floquet is named as prime minister.

1889. The Floquet cabinet resigns and is succeeded by that of Tirard, in February. The partisan enmities of the time culminate in an attempt to carry General Boulanger to the chief power in the state. An order for the General's prosecution is made by the Senate and he flies from France; his party is virtually suppressed.

An international exhibition of the industrial and fine arts is held at Paris.

1890. The elections of the year result in a great **victory for the Republicans,** who have 325 members of the Chamber against 246 in opposition. The faction of the Boulangists is reduced to weakness and ridicule. The ministry of Tirard resigns in March, and Freycinet again becomes premier.

1891. An anti-German demonstration occurs in Paris on the performance of Wagner's *Lohengrin*, September 16. France enters into relations of romantic **friendship with Russia;** the French fleet is received with enthusiasm at Kronstadt.

An order is issued by the government for stopping pilgrimages to Rome; French pilgrims in Italy are attacked by the Italian populace for alleged insults to the tomb of Victor Emmanuel.

1892. Great excitement arises in France over the anarchist outrages. In February, the ministry of Freycinet is overthrown; Loubet becomes prime minister. In this year the cholera reaches Paris. The French troops make a victorious campaign in Dahomey, in September and October. In November frauds in connection with the finances of the Panama Canal company are discovered; **Count Ferdinand de Lesseps** and his associates are arrested in Paris; in the following year their trial results in their conviction. Revelation of extraordinary corruption is made, showing that a number of senators, deputies, and ex-ministers have been personally and politically dishonest. The Loubet ministry is overthrown and is succeeded by that of Ribot.

1893. The French fight a sanguinary battle with the Siamese, May 17; on May 29 Siam makes a disadvantageous peace, a treaty being signed October 1. The government is reconstructed under Ribot with a view to eradicating the Panama scandal.

1894. On June 24, **President Sadi-Carnot is assassinated** at Lyons, and on June 27, Casimir-Périer is elected his successor.

The romantic friendship of France and Russia weakens; the French Chamber raises the tariff on Russian imports while the German Reichstag reduces it. A resolution is adopted by the Chamber declaring freedom of religious worship and observances. The country is greatly agitated by the arrest, trial, and condemnation of Captain Alfred Dreyfus, a Jewish officer in the French army, charged with selling secret information regarding the army and the military service to the agent of a foreign government; Dreyfus is sentenced to transportation for life.

The Casimir-Périer ministry is overthrown in May, and a new government formed under the leadership of Dupuy.

1895. President Casimir-Périer resigns on account of lack of cordial relations with his associates and is succeeded by **François Félix Faure,** January 17. On the latter's accession the cabinet of Bourgeois, which succeeded to that of Dupuy, is succeeded by that of Ribot.

On October 28, the Ribot cabinet resigns, owing to scandals connected with the management of the Southern railway of France. Bourgeois is again premier.

1896. On April 23, the second ministry of Bourgeois resigns. On April 28, Méline, the new premier, forms a cabinet composed of Moderates and Republicans. September 30, the **commercial treaty** between **France and Italy** is formally signed in Paris. October 5, the Czar and Czarina arrive in France and are received with great enthusiasm.

November 17, the Chamber of Deputies adopts a radical proposition to substitute universal suffrage for the municipal councils in the election of the delegates who elect senators.

1897. March 30, the trial of the deputies recently accused of participation in the Panama scandals is begun; several are convicted. April 15, France and Brazil refer their territorial dispute to arbitration. During the year, the so-called "Dreyfus Scandal" of 1894 is revived, and the public agitation assumes a threatening aspect.

1898. Emile Zola, the novelist, publishes a denunciation of the French government and the court-martial which convicted Captain Dreyfus, charging both with injustice, tyranny, and falsehood. For this he is arrested, and, in the midst of national excitement and passion, is tried and condemned to fine and imprisonment for one year, February 23.

1899. On February 16, President Félix Faure dies of apoplexy, and on February 18, **Emile Loubet** is elected his successor.

Dreyfus is brought back to France and again tried by court-martial. Again found guilty, September 9, he is pardoned, September 19.

1900. Théâtre Français is burned at Paris, March 8.

Paris Universal International Exposition, April 14–November 15.

1901. For trouble with Turkey, see TURKEY.

Owing to the growth of the religious communities and their vast wealth in real estate, deemed by some a menace to the state, the **Bill of Associations,** a measure for the strict regulation of religious orders, especially for the restriction of their possession of property, is passed in June. Many of the Jesuits and Benedictines withdraw.

The Czar and the Czarina land at Dunkirk, September 18; they are received with the greatest enthusiasm by all classes, as the visit is thought to strengthen the Franco-Russian alliance.

M. Santos-Dumont makes a successful trip in his dirigible balloon and wins the Deutsch prize of $20,000, October 19.

1902. Census returns published in January show an increase of only 444,613 in five years. Total population 38,961,945. The excess of births over deaths is decreasing. February 26, centenary of Victor Hugo's birth is celebrated. May 9, **Humbert swindle** exposed. On pretended securities sealed and deposited in a safe, Madame Humbert borrowed several million francs. When examined the supposed securities were found worthless paper. May 15, President Loubet visits St. Petersburg. His very cordial reception strengthens the Franco-Russian alliance. Following Waldeck-Rousseau's resignation May 23, **M. Combes,** the Radical leader, becomes **premier.** June 27, President **Loubet signs the decree** closing many religious institutions that have not complied with the Law of Associations. This causes disturbances in Paris and Brittany among the opponents of the measure, and wins support from the Socialist classes.

October 5, **Zola is buried** at Paris with impressive ceremonies.

October 6, 25,000 coal miners strike, incited in part by sympathy with the coal strike in the United States.

1903. There is continued trouble during the year from the religious associations. The stringent enforcement of the law continues; preaching orders are refused authorization; on March 26 the Carthusian monks are refused permission to remain in France, and in April measures are taken to expel unauthorized orders from the country.

June 12, military service is reduced from three to two years.

July 6, President Loubet visits England, thus returning Edward VII.'s visit of May 1. He is the first president of the present French Republic to visit London.

August 10, 84 persons are burned to death in the Paris underground electric railway accident. August 22, the **Humberts are convicted** of swindling and sentenced to 5 years' imprisonment.

October 14, agreement is made with Great Britain to submit judicial questions in the interpretation of treaties to the Hague Tribunal.

1904. February 20, rumors of a general European war cause the **greatest panic on the Bourse** since 1870.

March 5, the Court of Cassation at Paris grants a **new trial to Dreyfus.**

March 28, a bill prohibiting all teaching by the monks and nuns except in private is passed by a vote of 316 to 269.

President Loubet visits the King of Italy at Rome, April 24.

May 21, it is announced that the **French ambassador to the Vatican has been recalled.** July 29, diplomatic relations with the Vatican cease.

October 22, the Chamber of Deputies supports the Combes government against the Vatican by a vote of 318 to 230.

November 16, War Minister **André resigns** after a bitter debate in the Chamber of Deputies on the espionage of army officers.

The government, because of treaty relations with Russia, is intimately concerned with the progress of the war in the Far East. During the year French investors take up a Russian loan of $160,000,000.

For Anglo-French treaty, see GREAT BRITAIN.

1905. January 18, the **Combes ministry resigns.** January 21, President Loubet asks M. Rouvier to form a new cabinet. This is completed January 24, with Rouvier as premier and minister of finance. March 17, the Chamber votes to reduce the active term of military service to two years.

The **difficulty with Germany over the Moroccan question** causes much anxiety during the year. Germany had already shown signs of unrest at the Anglo-French Moroccan convention, and on March 29 the German chancellor insists on maintenance of German commercial interests in Morocco, and declares that the government will place itself in direct communication with the Sultan. March 31, the German Emperor lands at Tangier, and publicly antagonizes the French policy. April 7, M. Delcassé, the French foreign minister, explains in conciliatory terms the position of France, but German antagonism continues. June 3, the Sultan, under German inspiration and against the wishes of France, invites the Powers to an international conference, and on June 6 M. Delcassé resigns, M. Rouvier taking the office. July 8, the two governments come to an agreement, France accepting the conference on conditions admitting the integrity of Morocco, the principle of the open door, the necessity of police and financial reform, and the existence of the special interests of France.

July 3, the Chamber of Deputies passes the government bill for the separation of church and state by a vote of 341 to 233. This bill passes the Senate, December 6, by a vote of 181 to 102.

1906. On January 15, Moroccan conference opens at Algeciras, Spain.

On January 17, Clement Armand Fallières is elected president.

February 1 and 3, rioting occurs in many Paris churches over taking of inventories under separation law providing that churches and other religious establishments can be owned and used only by associations formed accord-

ing to, and governed by the provisions of, the civil law. At St. Clothilde's 100 are injured and 150 arrested. February 17, the Pope issues an encyclical against the separation law. On March 7 Rouvier ministry resigns, having been defeated over taking of church inventories under separation law. New ministry is formed on 13th with J. M. F. Sarrien as premier.

March 10, an explosion of gas in coal mines at Courrières kills about 1,100.

April 7, a treaty providing **joint control of Morocco** is signed. France and Spain are to police the country. France is to have three shares of the national bank stock, each of the other signatory powers, one.

May 6, elections begin. Result is large gain for the government.

July 12, **Supreme Court reverses conviction** of Captain Alfred **Dreyfus** and exonerates him completely. He and Colonel Picquart are restored to the army with advanced rank, and on July 21, Major Dreyfus is decorated with the cross of the Legion of Honor on the spot where he was degraded.

August 14, Pope issues encyclical instructing French Roman Catholics to offer passive resistance to the separation law. October 17, Sarrien ministry resigns. October 23, **Clémenceau takes office as premier.** General Picquart is made minister of war. December 11, **separation law** goes into effect. There is almost no disorder. Pope orders clergy not to make declarations under the law. During remainder of the year a few churches are closed; others are kept open through declarations filed by laymen. The government ousts Cardinal Richard from his palace and arrests and deports the secretary of the Papal Nunciature at Paris, but acts slowly in enforcing the new law.

1907. March 12, battleship *Jena* is badly wrecked by explosion of her magazines in dry dock at Toulon, and 117 of the crew are killed.

March 25–29, in exacting reparation for the murder of Dr. Mauchamp by Moors, France occupies Ujda (Oudja), Morocco, with Algerian troops.

June 9, several hundred thousand persons connected with wine growing hold vast demonstrations at and near Montpellier, demanding government action to relieve situation caused by low price of wine. A strike of civil employees, mutiny of a few troops, and a promise by the government to check adulteration result.

July 22, General Delacroix succeeds General Hagron as commander in chief.

August 10, the first **automobile race from Peking to Paris** is won by **Prince** Borghese of Italy. The start was on June 10.

1908. January 13, the Deutsch-Archdeacon prize of $10,000 is won at Paris by Henry Farman, an Englishman, for flight with heavier-than-air machine.

March 23, Henri Rochette is arrested, charged with having swindled French financiers to the extent of $12,000,000.

June 1, all the cotton-producing countries in the world are represented at the **International Conference of cotton spinners** in Paris.

June 3, the body of Zola is removed from Montmartre to the Pantheon. An attempt is made to assassinate Major Dreyfus.

June 13, the Senate and Chamber of Deputies almost unanimously adopt the secret ballot system.

June 25, the war balloon, La Republique, makes successful ascent at Nantes.

June 26, the parliament passes a bill for the purchase and operation of the Chemin de Fer de l'Ouest. An International Woman's Suffrage and Equal Rights Congress opens at Paris.

July 18, President Fallières starts on a visit to Denmark, Russia, Sweden, and Norway.

August 8, **Wilbur Wright,** of Ohio, flies 3 kilometers in one minute and forty-six seconds at Le Mans.

September 2, French defeat Arabs and Moors at Boudenib, Morocco.

September 22, the Celtic International Conference opens at Brest.

October 6, Wilbur Wright remains in the air in his heavier-than-air flying machine one hour, forty minutes and twenty seconds. During the year he breaks records for distance, height, and duration of flight.

November 5, France makes proposals to Germany for the arbitration of the **Casablanca incident.** It is referred to the Hague Tribunal.

1909. February 9, agreement with Germany as to administration of Moroccan affairs is signed.

March 15, general strike of government postal and telegraph employees is started. The government employs soldiers to fill strikers' places and refuses concessions. Its attitude is sustained in the Chamber of Deputies by a vote of 368 to 211. The strike gradually collapses, but is later revived and again suppressed vigorously. On May 13 the Chamber again sustains the course of the government by a vote of 454 to 59.

June 7, cabinet approves a naval program involving expenditure of $600,000,000 in ten years.

July 20, the **Clemenceau ministry** is **defeated** in the Chamber of Deputies and resigns. A new cabinet is formed under **Aristide Briand,** who has been known to sympathize with many socialist tenets.

July 25, Louis Bleriot, in a monoplane, crosses the English Channel from Calais to Dover.

FRENCH COLONIES AND DEPENDENCIES.

THE French Colonial Empire is vast and made up of widely separated territories in Africa, Asia, America and Oceania. Its area is estimated at 4,745,993 square miles, with an estimated population of 46,675,000.

FRENCH POSSESSIONS IN AFRICA.

ALGERIA.

ALGERIA like all northern Africa was conquered by the Mussulmans in the seventh century. Before that time the Vandal power had prevailed. In the sixteenth century, Khaïreddin Pasha, the Barbarossa of western Europe, the great admiral of Suleiman I., imposed for a time the authority of the Ottoman Turks. This control was never more than nominal and was thrown off altogether in 1705. Before that time and for long afterward piracy was the chief occupation of the Algerines. They kept the whole Mediterranean in terror. Napoleon suppressed them but, after his overthrow, they renewed their depredations. They were severely chastised by Commodore Decatur at the head of an American squadron in 1815, but their piracy was not abolished till the following year when Lord Exmouth with a British and Dutch squadron destroyed the whole of the Algerine navy and the greater part of the fortifications and buildings of the capital. The French war for the conquest of Algeria lasted from 1830 to 1847, and even then the obstinate occasional resistance of the Arab and Kabyle population did not cease until 1871. In that year France established a civil administration of the country, which had to rely however for ten years upon a standing army. Of late years the province has been peaceful and prosperous.

Government. Algeria is considered politically a part of France, each of the three departments into which it is divided sending one senator and two deputies to the national legislature. A governor-general at Algiers represents the French government and exercises large authority. He is assisted by an advisory council. Only the national legislature can legislate for Algiers.

Labor and Industry. Three fourths of the inhabitants are engaged in agriculture. The principal crops are wheat, barley, oats, maize, and millet. Garden vegetables are grown abundantly. The fig, orange, lemon, mandarin, almond, and date palm flourish. Mines of zinc, iron, lead, silver, mercury, copper, and coal are worked. The fisheries are extensive.

Religion. The native inhabitants are entirely Mussulman. The French population is Roman Catholic, with the exception of about 60,000 Jews.

Education. In 1905 there were 1,725 infant and primary schools, of which 269 were Mussulman: for secondary instruction there were 19 as well as several higher Mussulman schools at Algiers, Tlemcen, and Constantine. A superior institution at the city of Algiers, attended by 1,184 students in 1905, gives instruction in law, medicine and pharmacy, science and letters.

Defense. The Nineteenth Army Corps is stationed permanently in North Africa. The force in Algeria comprises 54,583 men of all ranks.

The area of Algeria is 343,500 square miles. The population is about 5,232,000.

TUNIS.

TUNIS was a vassal state of Turkey, although in 1871 the Ottoman Sultan released the Bey from payment of tribute. In 1881 the French invasion took place, and Tunis was placed under the protectorate of France.

Government. The formerly reigning family still occupies the throne, but the French Foreign Office, through a special department for Tunisian affairs, carries on the government. The French Minister Resident is also Tunisian Minister for Foreign Affairs. Of the nine heads of departments, seven are French. Administratively Tunis is divided into 16 civil and military districts, the governor of each being a Frenchman. The under officials are natives. An army of occupation, consisting of 20,362 of all ranks, the expense of which is defrayed by the French government, assists in the maintenance of order.

Industry and Labor. Soil and climate favor production, but there is little immigration and the natives are disinclined to work. Most agricultural products show no tendency to increase. The natural crops are wheat, barley, oats, and also oranges, lemons, almonds, nuts, henna, and cork. Copper, lead, and zinc are mined. The fisheries are valuable.

Religion. The natives are Mussulman; the foreigners, Roman Catholics and Jews.

Education. There is a Mussulman university at the city of Tunis and in the protectorate are 1,424 Mussulman schools. The French have established schools of all sorts.

Defense. The Tunisian army consists of the Bey's guard of about 600 men.

The area is about 45,780 square miles. The native population is supposed to number about 1,500,000. In 1906 there were 128,895 foreigners in Tunis.

THE SAHARA.

THIS name is given to the enormous region, extending west to the Atlantic from the Nile basin and south of the fringe of former Barbary States on the Mediterranean. A convention between Great Britain and France in 1898 determined its general boundaries. Its area is estimated at 1,544,000 square miles and its scattered population at 800,000.

FRENCH WEST AFRICA.

SOUTH of the western Sahara is a region, belonging to France, of about 1,510,514 square miles, in which are about 8,812,000 human beings. The historical nucleus of this region is the French colony of Senegal, which claims an antiquity of nearly 300 years. The territory has had various names, Senegal, Senegambia, French West Africa, and has been theoretically organized and reorganized over and over again. The occupation has been bitterly resisted by the natives, and only at a terrific price has France been able to overcome their opposition. The fact that Great Britain recognized the French claims was of great assistance in the conquest.

In 1899 what had been termed French West Africa was reorganized. In 1902 it was divided into SENEGAL, FRENCH GUINEA, the IVORY COAST, DAHOMEY, and the territories of SENEGAMBIA, or Upper Senegal, and of the NIGER. Though modified in detail, several times since, those divisions still exist in the main. They are generally alike as to their **Government:** a governor-general assisted by a council; their **Industry and Labor:** a lazy agriculture and the same spontaneous tropical products; their **Religion:** Mohammedanism and negro faiths; their **Education:** schools founded in large numbers by the Catholic and Protestant missions and by the French government. Everywhere is seen the effort of the French to civilize and benefit the country by force while reaping its material advantages. The railroad, the common road, the telegraph and the telephone are being advantageously introduced.

Senegal is the most western part of Africa. It is made up administratively of four municipal communes, whose inhabitants are regarded as Frenchmen and elect a deputy to the French national legislature; of certain territories on the rivers Senegal and Sine-Saloum and on the coast; of part of the former Protectorate of Senegal, now restored to the new Colony under the old name. The area is 73,973 square miles and the population 393,945.

French Guinea is on the Atlantic between Portuguese Guinea and British Sierra Leone. It reaches far inland. Its conquest was begun in 1843. The area is 92,249 square miles and population 1,500,000.

The **Ivory Coast** extends between Liberia and British Gold Coast and reaches inland to the old French Sudan, or the former Senegambia, now the

colony of the Upper Senegal and Niger. The French claimed this land in 1843, but commenced their occupation forty years afterward. Area 125,538 square miles, supposed population 890,000.

Dahomey lies along the Atlantic, west of German Togo. The coast is only 70 miles long, but the inland breadth is much greater. The French made their first incursions in 1851, proclaimed the annexation of the kingdom in 1894, but did not suppress its unspeakable horrors and depose and exile the king until six years later. Area 37,527 square miles; population 750,000.

Upper Senegal and Niger was organized in 1904. It lies upon the headwaters of the Senegal and Niger rivers, including the upper valley of the former river and all the countries in the Great Bend of the Niger. It takes in much of the indefinite region once called the French Sudan. The area is 302,136 square miles and the population not far from 5,000,000.

FRENCH KONGO.

French Kongo lies along the Atlantic, south of the German Kamerun. The French began the occupation in 1841. International European conventions have defined the limits. Since 1906 the territory has been divided into four districts, distinct from one another, each having its own administrator. So far little has been done for development of the natural sources of wealth in the soil, forests, and mines. The natives resent French intrusion and petty insurrections and wars have been many. Area 669,280 square miles. Population not far from 10,000,000.

FRENCH SOMALI COAST.

This is a strip of about 56 miles width, stretching along the Gulf of Aden from the Italian colony of Eritrea to British Somaliland. France acquired the port of Obok in 1862. The appropriated territory rapidly grew at the expense of Abyssinia from 1884 until in 1888 about 12,000 square miles, with 50,000 people, had passed under French rule. A fine harbor has been created at Jibuti, which the railroad renders of importance in the transit trade to the interior. Coffee, ivory, and hides are exported. Area 46,320 square miles; population 208,061.

MADAGASCAR.

The French base their claim to Madagascar upon the fact that in 1642 Louis XIII. granted a concession of the island to a French trading company. The natives however recognized no authority in the French monarch in the matter. In 1820 Radama I., the king of the Hovas, who had conquered many of the chiefs, was recognized by Great Britain as king of Madagascar. Ranavalona I., his widow, reigned from 1829 to 1861. She discouraged relations with foreigners. After several short reigns, Ranavalona III. succeeded in 1883. Meanwhile the French had secured cessions of territory from native chiefs, which cessions Ranavalona and the Hovas refused to recognize. In the ensuing war, which lasted with intermissions for 13 years, the natives were beaten. In October, 1895, the Queen acknowledged the supremacy of the French. In 1896 Madagascar was declared a French colony. In 1897 the deposed Ranavalona was exiled to the island of Réunion, whence in 1899 she was removed to Algiers.

Government. Madagascar is ruled by a governor-general who is aided by a consultative council of administration. The island is divided into 24 provinces, of which 19 are under civil and 5 under military government. Subordinate positions are held by natives. It is the administrative policy to perpetuate tribal divisions.

Industry and Labor. Agriculture is the principal occupation, next to which is raising cattle. Caoutchouc is the chief export, after which come hides, raffia, cattle, and wax. Valuable woods abound. Gold, iron, copper, lead, zinc, silver, nickel, and other metals are mined. The possible resources are many, but the immigration is small.

Religion. About one fifth of the natives are Protestant and Catholic Christians, numerous missions having labored in the country.

Education. By law all children from 8 to 14 must attend school and learn the French language. Grading of classes and method are according to the French system, to which private and mission schools also conform. There are several higher and special institutions.

Defense. Twelve thousand soldiers, over one third of whom are French. The area is 226,016 square miles. The population in 1909 was 2,701,081.

Réunion or **Bourbon,** discovered by the Portuguese in 1545 and occupied by the French in 1649, is an island 420 miles east of Madagascar. It is represented in the French national legislature by a senator and two deputies. The governor is assisted by a privy council and an elected council general. But for immigration the island would be depopulated, as annually the deaths exceed the births. The annual rainfall is twelve and a half feet. Sugar, rum, coffee, tapioca and vanilla are exported. The island was the home of many extinct birds, among them the dodo. The area is 965 square miles. The population is about 175,000, many of whom are Hindus from India.

Mayotta and the **Comoro Islands** are north of Madagascar. Sugar and vanilla are exported. Their area is 837 square miles. The population, mostly Mussulman, is about 96,000.

FRENCH POSSESSIONS IN ASIA.

French India is made up of petty fragments from the vast Colonial Empire attempted by Dupleix and broken to pieces by Clive. It comprises five widely separated towns on the coast of India, represented in the French national legislature by one senator and one deputy. Their entire area is 198 square miles. In 1906 the population was 277,723. Pondichéry is the most important of these towns and the residence of the governor. Its death rate in 1906 exceeded its birth rate by 13.82 per cent. The French occupation began in 1769.

French Indo China comprises five states, **Cochin China, Cambodia, Anam, Tonkin,** and **Laos,** and the port of **Kwangchauwan.** The entire area is 309,979 square miles and the population about 16,315,000. A governor-general presides over the whole country, while each state, if a protectorate, has a resident superior, or, if a French colony, a lieutenant governor. French occupation has encountered fierce and almost constant opposition from the natives. Order was maintained by a force in 1908 of 32,736 soldiers, of whom 14,309 were Europeans. The French Indo-Chinese navy is manned by 4,500 men, and consists of 1 battleship, 6 cruisers, 4 destroyers, 1 gunboat, 12 torpedo boats, 4 submarines and some worn-out craft.

Cochin China, area 21,988 square miles, in 1906 population 2,870,500, is the most southern of the states and includes the vast mouths of the Mekong River. Its acquisition was begun in 1861. It sends one deputy to the French national legislature. Much has been done for irrigation and drainage and to improve the material welfare of the country. Rice is the principal product. Most of the inhabitants are Buddhists. Its capital, Saigon, with wharves, repair and dry docks, and a naval yard, is one of the most important ports in Asia.

Cambodia, area 67,724 square miles. population 1,193,500, extends north of Cochin China. The Cambodian king, Norodon, recognized the French protectorate of the country in 1863. His brother, Sisowath, the present ruler, ascended the throne in 1904. Cambodia possesses one elementary and one higher school. Cotton, salt fish, rice, pepper, and tobacco are exported.

Anam, area 61,718 square miles. population about 5,514,000. of whom 250 are Europeans, and 420,000 native Roman Catholics, extends on the China Sea, northeast of Cochin China and Cambodia. The French began its occupation in 1787. Their protectorate was recognized by the Anamese king in 1884. The present king, Duy Tan, at the age of eight, in 1907, succeeded his father, who had abdicated at request of the French government. There are iron, copper, zinc, gold, and coal mines. Sugar, rice, spices, cotton and silk, are raised and exported.

Tonkin, area 46,223 square miles and population 5,897,000, is situated south of the Chinese Empire and north of Siam and Anam. It was annexed in 1884. Since 1902 its chief town, Hanoi, has superseded Saigon, as capital of Indo China. Much silk is raised, more than half of which is woven by the natives. Rice, sugar, cardamoms, cotton, coffee, spices, and tobacco are exported.

Laos, area 111,940 square miles, population 664,000, has been a French protectorate since 1893. Its real occupation has thus far been impossible against the resolute opposition of the native population. Moreover the country is mountainous and difficult of approach. The natural wealth, both mineral and agricultural, is very great.

Kwangchauwan, area 386 square miles, population about 177,000, was obtained by lease from China in 1898. It is a valuable free port lying on the China Sea and is under the authority of the governor-general of Indo China.

FRENCH POSSESSIONS IN THE PACIFIC.

New Caledonia is an island, area (with dependencies) 7,200 square miles, lying in the South Pacific Ocean, east of Queensland, Australia. Dependent upon it are the neighboring Loyalty Islands and some almost barren islets. The entire population of the group is about 55,000, two fifths of whom are white. Of the white inhabitants 6,741 men and 293 women are persons undergoing, for various reasons, punishment or requisition at the penal settlement. The practice of sending deported or convicted persons to New Caledonia was discontinued in 1898. The island is not prosperous. Rum, coffee, tobacco, sugar and fruits are exported. There is a governor, assisted by a privy council and by an elective general council.

The **New Hebrides,** commonly regarded as French but under a joint Anglo-French commission of naval officers, are in the South Pacific, northeast of New Caledonia. The area is about 5,000 square miles and the population about 50,000. Most of the inhabitants are Papuans, formerly cannibals, converted by the missionaries. In 1905 there were 417 French and 225 British residents. There is considerable industrial activity. Maize, copra, coffee, and kauri wood are exported.

Scattered in the Eastern Pacific are a number of island groups, belonging to France. Their entire area is about 1,183 square miles. The population is supposed to number 30,500. The affairs of these groups are administered in common by a governor, assisted by an administrative and a privy council. The **Society Islands** and the **Marquesas Islands** are the more valuable. The Society Islands were discovered in 1606 by Spanish navigators, were several times visited by Captain Cook and afterward became the place of refuge of the mutineers of the *Bounty*. France annexed them in 1880. Tahiti is by far the largest of the group. Tropical fruits grow in abundance. All the native inhabitants are Christians and practically all can read and write. In 1906 by a cyclone about 10,000 persons were killed at Tahiti and over $1,000,000 of property destroyed. The South Marquesas Islands were discovered in 1595 by Mendaña and the North Marquesas in 1791 by the American Captain Ingraham, who named them the Washington Islands. Commodore Porter formally declared them American territory, but the American government made no assertion of its rights, and in 1842 France took possession. On the opening of the Panama Canal, they will be of marked strategic and commercial importance in the Pacific.

FRENCH POSSESSIONS IN AMERICA.

French Guiana, area 34,061 square miles, population 39,117, lies between Dutch Guiana and Brazil. It is the only French possession on the mainland of the Western Hemisphere. It was first occupied by the French in 1604. The long-disputed boundary with Brazil was determined by the Swiss Court of Arbitration in December, 1900, and the boundary with Dutch Guiana in 1905. Since 1855 Guiana has had a penal settlement for convicts and political offenders, of whom in 1907 there were 9,666 men and 182 women. On the Île du Diable, Captain Dreyfus was confined in 1895–99.

Martinique, area 381 square miles, population 182,024 in 1906, is one of the West Indies. It was settled in 1635 by the French, who soon exterminated the natives. Taken by the British in 1794 and again in 1809, it was on both occasions restored at the conclusion of peace. It is represented in the French legislature by one senator and two deputies. It is noted as the birthplace of

Josephine de la Pagerie, who became the wife of Napoleon. The island has suffered terribly from tornadoes and earthquakes, notably twice in 1902 from eruptions of Mount Pelée, which were among the most destructive in volcanic history.

Guadeloupe, area 687 square miles, population 190,000, is the name given to two closely adjacent islands of the West Indies. Dependent are the five smaller islands, Marie Galante, Les Saintes, Désirade, St. Barthélemy and St. Martin. Guadeloupe was occupied in 1635 by the French, who lost it several times in war but always regained it when peace was concluded. It is represented in the French legislature by one senator and two deputies. The exports, like those of Martinique, are sugar, rum, coffee and cacao.

St. Pierre and Miquelon, each the largest of a small group of islands, are all that remain to the mother country of the once magnificent province of New France. They lie in the Atlantic, south of and near the coast of Newfoundland. The combined area of both groups is 93 square miles, and their total population in 1902 was 6,482. The islands are hardly more than bare rocks. Catching and drying fish is the single occupation of their hardy inhabitants.

THE GERMAN EMPIRE.

So much obscurity surrounds the name and the fact of the German Empire, that it seems desirable to trace distinctly the successive historic developments associated with that term, and with the Holy Roman Empire out of which it grew. It will be seen how by a gradual transformation the idea of a universal Christian monarchy with its capital at Rome was exchanged for a partial and limited federation of certain states, which in turn gave way in the present century to a highly organized and mighty nation under the leadership of Prussia.

When Charlemagne was crowned Emperor of the Romans, by Pope Leo III., on Christmas Day, 800, he was looked upon as the legitimate successor of Augustus, Constantine the Great, Theodosius, and last of all, Constantine VI. (780–797). In Constantinople, the Empress Irene had deposed and blinded her son Constantine VI. (797), and the opportunity seemed a fit one for restoring the seat of empire to the ancient capital and for bestowing the dignity upon a sovereign worthy of it.

As a matter of *fact*, this act laid the foundation of the "Holy Roman Empire" of the German Nation, as it came, later, to be styled; as a matter of *form*, it undid the work of Constantine the Great, and made old Rome once more the capital of the Empire. The authority of the new Roman Emperors, however, was never acknowledged in the East.

The successors of Charlemagne found it impossible to preserve intact the territory of the Empire he had recreated, and by the close of the ninth century the disintegration was complete. The Empire was restored, but with contracted boundaries, by the coronation of Otto the Great in Rome by the Pope, in 962. The title "Holy" was added to the Roman Empire during the reign of the Emperor Frederic Barbarossa, 1152–1190.

To the dignity of Emperor any Christian prince was theoretically eligible; but all the Emperors belonged to reigning German houses except the two contesting claimants, Richard, Earl of Cornwall (son of King John of England), elected (1257) by a part of the Electors, and Alfonso of Castile, elected at the same time by the rest of the Electors. This international character of the position of Emperor accounts for the pretensions to it of Francis I. of France and Henry VIII. of England, in 1519.

The imperial dignity was elective as a matter of form, but always tended to become hereditary as a matter of fact, because reigning Emperors found it practicable to have their sons elected to succeed them. One who was thus designated beforehand to be Emperor was technically called "King of the Romans," until he was crowned by the Pope in Rome as Emperor. Strictly speaking, a ruler was elected "King of the Romans," and crowned "Emperor of the Romans" by the Pope, but outside of Germany the king was usually styled Emperor after election and before the coronation.

The election was made by seven great Princes of the Empire known as Electors. They were, before the Peace of Westphalia (1648), the Archbishops of Mentz, Treves, and Cologne, the King of Bohemia, the Count Palatine of the Rhine, the Duke of Saxony, and the Margrave of Brandenburg. The last Emperor to be crowned in Rome was Frederick III. (1440–1493). His coronation took place in 1452. His son Maximilian (1493–1519) was unable to visit Rome, and in 1508 he was authorized by Pope Julius II. to take the title of "Emperor Elect." Maximilian also called himself "King of Germany," a title not hitherto employed.

Charles I. of Spain, grandson of Maximilian, was elected King of the Romans in 1519, and as such he became Charles V. He also was unable to go to Rome, and for this reason, in 1530, he induced Pope Clement VII. to come to Bologna and to crown him there. Charles V. had his brother Ferdinand elected King of the Romans in 1531, and when Charles abdicated in 1556, Ferdinand succeeded to the imperial dignity, calling himself "Emperor Elect of the Romans." This title was henceforth adopted by the successive Emperors immediately upon their election, and the title "King of the Romans" fell into disuse.

The Empire was pretty thoroughly reorganized by the treaty of Osnabrück at the Peace of Westphalia (1648) following the Thirty Years' war. Henceforth this treaty became in a sense the written constitution of the Empire, as the Golden Bull (1356) of Charles IV. had been for the previous period. During the rest of its existence the Empire was a lifeless confederation under the leadership of the House of Austria. To the non-German the political relations of the states of the Empire are often very perplexing. Several of the Princes stood in double (and often conflicting) positions, in one relation as members of the Empire and in another as outside powers.

For example, in the eighteenth century, the Archduke of Austria was usually Emperor. At the same time, as King of Bohemia he was an imperial Elector, and *inside* the Empire he was the ruler of the Austrian Netherlands (approximately the modern kingdom of the Belgians). *Outside* the Empire, he was King of Hungary, and Duke of Milan. Again, the Margrave of Brandenburg was an electoral Prince in the Empire, while outside of it he was King of Prussia, and Duke of Silesia (after 1742). The Duke of Brunswick-Lüneburg was made an imperial Elector in 1692, being commonly called the Elector of Hanover. In 1714, the Elector of Hanover became King of England!

This Empire, a political monstrosity, consisting of a congeries of some three hundred sovereign states, was powerless to resist the terrific blows of Napoleon, and, as a consequence, the "German Body" became the common prey of France, Austria, and Prussia. The process by which it was finally brought to extinction was as follows: By the treaty of Lunéville the states on the left bank of the Rhine were ceded to France. This dispossessed many petty Princes who were promised compensation elsewhere. Such satisfaction was provided in 1803 by handing over to these and other Princes almost all the ecclesiastical states (those ruled by Bishops and Abbots) and all but six of the imperial free cities. This was done practically under the dictation of Napoleon. He also authorized Austria and Prussia to appropriate portions of the Empire.

Napoleon, after his great victory at Austerlitz, in which Austria was crushed, organized the Confederation of the Rhine (July 12, 1806). The states making up this Confederation comprised practically all "the Empire" except what belonged to Austria, Prussia, Brunswick, and Hesse. They now severed their relation to the Holy Roman Empire and entered into a similar one with the Empire of the French. This was the deathblow to the old Empire. The formation of this league was announced in the imperial diet, August 1, 1806, and on August 6, Francis II., the last Emperor of the Romans, declaring it to be no longer possible to fulfill the obligations of the Empire, announced the dissolution of its bonds and resigned the office of Roman Emperor. His own possessions in the future he would rule as "hereditary Emperor of Austria." This new title had been invented two years before. If the Holy Roman Empire should go to pieces, Francis II. would be no longer an Emperor, but merely King of Hungary and of Bohemia and Archduke of Austria. As that event was only too probable, on August 14, 1804, he had publicly assumed the title of "hereditary Emperor of Austria," and for the next two years he bore the double title "Roman Emperor elect, hereditary Emperor of Austria." This on the part of Francis II. was a stroke of policy most adroit.

The Austrian Empire was thus a modern arbitrary creation; but owing to the long and intimate relations of the House of Austria to the Holy Roman Empire, the new Austrian Empire seemed in a sense to step into its station and receive the mantle of the Holy Roman Empire and in much of the popular writing upon modern European politics may be found expressions seeming to recognize this strictly nonexistent relation of succession.

In 1815 the Congress of Vienna established a confederation of the German states to take the place of the Old Empire. This new body consisted of thirty-eight sovereign states, including one empire (Austria), five kingdoms, of which Prussia was the largest, one electorate, and seven grand duchies. By the territorial settlement of the Congress, Prussia was permitted to make positive gains in German lands, while Austria lost in North German lands and gained in Italy. The question of the future was to be whether a new and stronger union of German states should grow up around Prussia or around Austria as the leading and central power. This question was settled finally in favor of Prussia in the war of 1866.

An important stage in the development of the existing German Empire under Prussian leadership was the formation of customs unions among groups of states which established free trade and consequently close commercial relations inside the group. The first group, including Prussia and several smaller states, took shape in the years 1819–1830. In 1824 a second customs union was formed by Bavaria and certain of the smaller states. In 1833 members of both these groups united, forming the basis of the Zollverein (Customs Union), which was fully organized in 1837 and comprised the Prussian group and eight other states (among them Bavaria, Saxony, Württemberg) with a total population of 26,000,000. It was significant and prophetic that Austria was *not in this nucleus* of the present German Empire.

The titanic struggle of 1870–71 between the Frank and the Teuton, in which Prussia took the leading part, brought the Germans together as machinations of statesmen and years of peace could not have done It was a fitting climax when, on January 18, 1871, in the palace of Versailles, built by Louis XIV., the archenemy of Germany, the present German Empire was constituted and King William of Prussia was proclaimed German Emperor.

Government. The present constitution of the German Empire dates from April 16, 1871. The instrument declares the object of the new form of government to be "an eternal alliance for the protection of the territory of the confederation, and of the laws of the same, as well as for the promotion of the welfare of the German people." The executive authority as to both civil affairs and military command is vested in the King of Prussia, who is, by the conditions under which the Empire was constituted, the German Emperor. He is the representative of the Empire in all international matters. The Emperor cannot declare *offensive* war without the consent of the Bundesrath. He has no veto over laws passed by the concurrence of the Reichstag and the Bundesrath. He may not make a new statute; for that right is lodged exclusively with the legislative bodies just referred to. The Bundesrath is the German Senate. The body consists of fifty-eight members who represent the different states of the imperial union and are appointed by the respective governments for each session. The Reichstag is composed of 397 members, who are elected by the people of the various states as representatives of the German nation. They are chosen by universal suffrage, the method being by ballot. Both bodies meet annually; the term of service is five years. The government is conducted practically by the Chancellor of the Empire, who is assisted in his duties and responsibilities by fourteen ministers or secretaries, who do not, however, form a cabinet in the British manner, but who act separately under direction of the Chancellor.

The German government is a compound of the absolute with the parliamentary principle. It is difficult to describe the relative proportion of the two elements, partly because it is in reality somewhat indeterminate. The Parliament possesses the right of legislation and of financial supply, which gives it a kind of control over the governmental policy. But the Emperor, in addition to the strong influence he is able to exert on legislation, has the right, with the concurrence of the Bundesrath, to prorogue or even dissolve the Reichstag. But in case of such a dissolution he must order a new election within sixty days, so that theoretically the Emperor's only final weapon against the legislature is an appeal to the people. The Chancellor, standing like the English Prime Minister between the Crown and the Parliament, represents, however, the personal choice of the sovereign. The judiciary, too, is largely under the influence of the monarch. Under this somewhat elastic constitution, an emperor of an authoritative temper, like Wilhelm II., can and does exercise a greater degree of personal control than the sovereign of any other European state except Russia and Turkey. Yet he must share his power with the Parliament; must submit to the dissents and criticisms of the opposition within that body; and must even tolerate the presence of a large and growing Socialist representation.

It must be remembered, too, that in much which seems absolutism to American and English observers, the Emperor is backed by a strong sentiment among his people, especially among the aristocracy. The enormous multiplication of offices in much-governed Germany creates a vast and powerful official class, a bureaucracy, which is in natural alliance with the aristocracies of birth and of wealth. On the other hand, Germany is the stronghold of Socialism. Its theories were worked out by German intellects like Marx and Lasalle; those theories are congenial to a people accustomed to see all manner of functions

exercised by governmental power; and there is enough of liberty to allow a vigorous propagandism. The development of the German nation is one of the most interesting and complicated of political problems, and historical precedents and modern parallels are insufficient to justify any confident forecast.

The Empire embraces twenty-five states, each with its own constitution, following the general parliamentary pattern. Of the total population, more than three fifths are inhabitants of Prussia. At a long distance after follows Bavaria, then Saxony, Württemberg, Baden, and a list of petty principalities.

Industry and Labor. The productions of Germany are so extensive and varied as to baffle attempt at brief description. Each of the twenty-five states comprising the Empire has its own system of industries and its own peculiar methods. In general, free landownership is the rule. The benefits of this system are seen most fully in Western Germany, where small holdings and peasant proprietorship are the rule. In the northern parts of the Empire, large estates prevail, with a tendency to baronial usages. Long occupation of the country by the German race has led to the general recovery of the lands, about ninety-five per cent of which have been rendered productive. More than a third of the population are dependent on manufacturing, metal working, or mining, and nearly one third depend on agriculture.

Religion. Religious liberty and freedom of conscience are fully guaranteed in Germany. Ecclesiastical relations are adjusted by each state for itself, but without prejudice to any religious faith. In Prussia, the state church is Lutheran (Reformed and Calvinistic), while a third of the population is Catholic. The other states are variously divided. Not only civil but also social disabilities on account of religion have been removed. Politico-religious institutions, however, are interdicted as far as practicable. The order of the Jesuits is inhibited in all the states of the Empire. Other religious orders and convents are forbidden by law, except in so far as they engage in purely benevolent and philanthropical works. Catholicism, however, is still so strong in Germany that when Chancellor Bismarck at the height of his power attempted to curb sharply its ecclesiastical functions, he was obliged to yield.

Education. In the matter of education, Germany, without doubt, takes the lead among the great nations of the earth. The German people are on the whole the best educated of mankind. Nor is the disposition to educate a recent sentiment of this strong and original race. For several centuries the spirit of inquiry has been abroad in the German countries. It was out of the German university, more than three and a half centuries ago, that the reformatory spirit rose and went abroad among all the Teutonic peoples. While their opinions, usages, traditions, and prejudices survive more obdurately than is the case with the French, the Americans, or even the English, it is still true that the power of intellectual evolution is greatest among the Germans.

The educational system of the Empire is free for all and compulsory. From the privileges of the higher education, however, German women are excluded. The primary system provides for elementary schools, supported by local taxation in every precinct. All parents are obliged by law to avail themselves of the privileges thus provided. The age for primary instruction extends from the sixth to the fourteenth year. It is in the middle education that the Germans have surpassed the other peoples. In this field are a number of intermediate and secondary schools which are unsurpassed in their sufficiency. At the head of this part of the system are the gymnasia, famous throughout the world. These cover a period of nine years' development, in which the German youth are prepared for the Universities. Universities of high reputation, many of them dating back to the Middle Ages, exist in twenty-one of the German cities. These employ about 3,300 professors and are attended by more than 36,000 students, many from foreign countries. At the head numerically are the Universities of Berlin, Munich, and Bonn.

Defense. The power of the German Empire is greatest in its magnificent army. It was by this agency that, after a lapse of sixty-five years, the Empire was revived at the close of the Franco-Prussian war. The military resources of the German states, under the hegemony of Prussia, were carefully developed for many years before that great conflict, so that the French armies were no match for their adversaries. Since the institution of the New Empire, the military arm has been strengthened and perfected. It is doubtless the mightiest military organization which the world has ever seen.

Every male citizen from the age of 17 to 45 is liable to service, though not actually called before 20. Annually about 1,000,000 young men reach that age. All of them are examined, but less than one half are judged fit for the army. Of those judged fit, more than half are assigned to the Landsturm or, in other words, are practically exempted. Consequently the contingent remaining for actual service hardly exceeds 200,000. These are to serve 7 years in the First Line, 2 or 3 years of which are in the ranks and 5 or 4 in the First Line reserve; then 5 years in the first "ban" and 6 to 7 years in the second "ban" of the Landwehr; finally 6 years in the Landsturm. The peace establishment in 1907 was 614,837 men. The effective force on a war footing is estimated at three times that number or about 1,800,000.

Reckoning only the effective vessels, in 1907 there were 33 battleships (5 building or planned), 42 armored cruisers (6 building), 81 destroyers (24 building), 47 torpedo boats and 2 submarines (several building). The maintenance of such an army and navy is a heavy drain upon the German people, but, situated as the Empire is in the heart of Europe, it is difficult to see what other policy Germany can pursue. While prepared for any emergency, it is to be remembered that she has attacked none and has maintained peace with all.

The area is 208,780 square miles. In 1905 the population was 60,641,278.

1657. Poland by the treaty of Wehlau gives up the suzerainty over the **duchy of Prussia** to the **dukes of Brandenburg,** under the leadership of **Frederick William, the Great Elector.**

1658. Leopold I. is elected emperor, July 18, a year after the death of Ferdinand III., who dies on April 2, 1657.

1661. **A war with the Turks** begins, occasioned by the election of a prince in Transylvania.

1664. Count Raimund Montecuccoli, the leader of the imperial forces, **defeats the Turks** in the battle of St. Gothard, August 1. A truce of twenty years is, however, concluded in favor of the Turks. Germany becomes involved in a **war with France.** (See FRANCE.)

1675. The French under Condé defeat Montecuccoli. (See FRANCE.)

1679. The **peace of Nimeguen** is signed by France and Germany; Freiburg in the Breisgau is ceded to France.

1681. The French occupy Strassburg. (See FRANCE.)

1682. A second war with the Turks begins. (See AUSTRIA-HUNGARY.)

1687. Leopold compels the Hungarians to recognize the **Hapsburgs as the** hereditary ruling house.

1688. The **French renew the campaign** against Germany and occupy Philippsburg. (See FRANCE.)

1689. The palatinate is harried by the French, but the Germans are victorious along the Rhine.

1692. Hanover becomes an electorate (the ninth).

1697. **Prince Eugene** of Savoy defeats the Turks at Zenta, September 11.

1699. The peace of Carlowitz is made with Turkey, January 26.

1701. Frederick III., elector of Brandenburg, by the consent of the Emperor, proclaims himself **king of Prussia,** as Frederick I.

1705. Leopold I. dies and is succeeded in the imperial dignity by his son, Joseph I., May 5. He dies, April 17, 1711, and is succeeded by his brother, Charles VI., October 12.

1713. The **treaty of Utrecht** puts an end to the **war of the Spanish succession,** April 11. Neufchâtel is ceded to Prussia; Frederick William I. succeeds his father, Frederick I., as king, February 25. The emperor, Charles VI., having no sons, issues the **Pragmatic Sanction** in order to secure the succession in his Austrian dominions to the female line.

1714. The treaty of Baden is signed by the Emperor with the French.

1724. Charles VI. proclaims publicly the Pragmatic Sanction, after having negotiated for its acceptance with the other powers.

1725. Austria and Spain having formed an alliance to support the Pragmatic Sanction, England, France, and Prussia unite to oppose it.

1726. Austria and Prussia conclude the treaty of Wusterhausen.

1731. The Protestants are driven out of Salzburg; some of the refugees make their way to America to become colonists in Georgia.

1733. Augustus II., elector of Saxony and king of Poland, dies, on February 1; he is succeeded in Saxony by his son Frederick Augustus II. In September, the Poles elect their former king, Stanislas Leszczynski, chiefly through the influence of Louis XV. of France. Spain and Sardinia support this election, but the Austrians and Russians obtain a minority election of Frederick Augustus II. of Saxony as Augustus III., in October, and Stanislas is driven out; thereupon the **war of the Polish succession** begins. (See FRANCE and RUSSIA.)

1738. The war ends with the treaty of Vienna between Charles VI. and Louis XV. of France, in November.

1740. Frederick William I. dies; he is succeeded by **Frederick II. (the Great)** as king of Prussia, May 31. On October 20 the Emperor Charles VI. dies; according to the Pragmatic Sanction he is succeeded in Austria by his daughter, **Maria Theresa,** but this succession is disputed. (See AUSTRIA.) Frederick II. of Prussia demands the surrender of Silesia and makes a campaign into that province, in December. This is the antecedent movement of the Seven Years' war.

1742. Charles Albert, elector of Bavaria, is chosen emperor of Germany as Charles VII., on January 24.

1745. Charles VII. dies, January 30. Maximilian Joseph, who succeeds him in Bavaria, makes peace with Maria Theresa of Austria. Francis Stephen, grand duke of Tuscany and husband of Maria Theresa, is elected emperor of Germany as **Francis I.,** September 13. A treaty at Dresden, between Prussia, Austria, and Saxony, ends the war in Silesia, which is ceded to Prussia.

1748. The **war of the Austrian succession** ends with the peace of Aix-la-Chapelle, October 18. (See AUSTRIA.)

1756. The **Seven Years' war** begins. Frederick invades Saxony, and captures Dresden, in August. Austrians are defeated, October 1. (See AUSTRIA.)

1757. Frederick II. is threatened with the ban of the empire, but Brunswick, Hesse, Gotha, and Hanover remain in alliance with Prussia. **Russia and Austria** form a treaty for the **division of Prussia,** in January, and in May Austria makes a treaty with **France** of the same purport. **England,** on the other hand, allies herself with **Prussia.** The Prussians invade Bohemia. On August 30, the Russians defeat the Prussians at Grossjägerndorf, but immediately afterward withdraw from Prussia. On November 5, Frederick and Seydlitz defeat the imperial army and the French allies at **Rossbach;** Frederick then leads his army into Silesia. (See AUSTRIA).

1758. Ferdinand of Brunswick is victorious over the French at Crefeld, June 23. On August 25, Frederick defeats the Russians (who have again advanced into Prussia) at **Zorndorf.** The Austrians, under the leadership of Daun, are victorious at **Hochkirchen,** on October 14.

1759. On April 13, Ferdinand of Brunswick is defeated by the French at Bergen, but he overcomes them on August 1, at Minden. On July 23, the Russians at Kay vanquish the Prussians and form a union with the Austrians under Laudon. On August 12, the allies overwhelm Frederick at **Kunersdorf,** and the imperial army captures Dresden.

1760. Frederick defeats the Austrians at **Liegnitz,** August 15. In October, the Russians surprise Berlin and burn it, but retreat. On November 3, the Austrians, under Daun, are routed at **Torgau.**

1761. Frederick opposes the Austrians and Russians at Bunzelwitz.

1762. On March 16, Russia makes a truce with Prussia, and this is followed, on May 5, by the **peace of St. Petersburg,** Russia restoring her conquests. The peace of Hamburg with Sweden is concluded, on May 22. Frederick defeats the Austrians at Berkersdorf, on July 21; the Austrians are routed at Freiberg, on October 29.

1763. The **peace of Hubertsburg** is signed by Prussia and Austria; Silesia is finally ceded to Prussia; thus ends the Seven Years' war.

1765. **Joseph II.** is elected emperor, Aug. 18, succeeding his father, Francis I.

1772. In the **first partition of Poland,** Prussia receives Polish Prussia.

1778. The death of Maximilian Joseph, elector of Bavaria, in December, 1777, without direct heirs, leads to the **war of the Bavarian succession.** By the treaty of Vienna, Joseph II. secures from Charles Theodore, elector palatine (the legal heir of Bavaria), a recognition of the old Austrian claim to Lower Bavaria and part of the upper palatinate; the Austrian troops occupy the Bavarian territory. Prussia and Saxony oppose this movement, and an almost bloodless war results in the treaty of Teschen, in May, 1779; Austria renounces all but a small portion of her claims to Bavaria, and Ansbach and Baireuth are added to Prussia.

1785. In order to oppose the designs of Austria in connection with Bavaria, Frederick the Great, in July, forms a **league of German princes,** including those of Prussia, Saxony, and Hanover; the league is afterwards joined by Brunswick, Mainz, Hesse-Cassel, Baden, Mecklenburg, Anhalt, and the Thuringian territory.

1786. **Frederick William II.** succeeds to the throne of Prussia on the death of his uncle, Frederick the Great, August 17.

1787. Prussia interferes in the affairs of Holland. (See HOLLAND.)

1790. Joseph II. dies, February 20, and his brother, Leopold II., is elected emperor, September 30. Leopold suppresses an insurrection which has broken out in Belgium and restores the old constitution.

1791. Leopold II. and Frederick William II. meet at Pillnitz and proclaim their **support of the loyalists of France** against the revolution in that country, August 27. (See FRANCE.)

1792. The Duke of Brunswick issues a bombastic manifesto from his camp, July 25. Leopold II. dies, March 1, 1792, and his son, Francis, is elected emperor as Francis II., July 5.

1793. A grand **coalition against France** is formed by Austria, Prussia, and the German Empire, with England, Holland, Spain, and Naples. (See FRANCE.) Austria acts independently of the Empire at first, but on March 22, 1793, the Diet for the Empire declares war against France. In the **second partition of Poland,** Prussia acquires the western portion and Dantzic.

1794. Prussia with Austria aids the Russians against the Poles. (See RUSSIA.)

1795. In the **third partition of Poland** Prussia gains Warsaw.

1797. Frederick William II. dies and is succeeded by his son, **Frederick William III.,** as king of Prussia, November 16.

1801. Francis II. and Napoleon conclude the **peace of Lunéville,** by which France receives all the territory west of the Rhine, February 9. (See FRANCE.) Francis acts in double capacity as sovereign of his hereditary possessions, and as Emperor, although without being authorized to do so by the Diet. The Diet, however, soon ratifies the treaty.

1803. In February, the Princes losing the territories ceded to France are indemnified with territories made up from the imperial free cities and the ecclesiastical states, nearly all of which are devoted to this purpose. These changes secularize and make Protestant the Holy Roman Empire. In the Diet of the old Empire the Catholics have 55–57 votes to the 43–45 of the Protestants. In the reorganized Empire the Protestants have 52–53 votes to the 29–30 of the Catholics.

1804. August 14, the Emperor, Francis II., in view of the probable dissolution of the old Germanic Empire (the Holy Roman Empire), assumes the new title of "Hereditary Emperor of Austria."

1806. August 1, the formation of the **Confederation of the Rhine** by sixteen states of the Empire and their consequent secession and alliance with France is announced in the Diet of the Empire.

On August 6, Francis II., under the dictation of Napoleon, dissolves the Holy Roman Empire and resigns the office of Emperor, announcing that he will rule as hereditary Emperor of Austria.

1807. The **treaty of Tilsit** with France is signed by Prussia; Prussia cedes to France her territories west of the Elbe and her recently acquired dominions in Poland. (See FRANCE.) The kingdom of Westphalia is created by Napoleon out of German states which have been part of the Empire. The King of Prussia under the influence of **Stein** institutes **important political reforms** in his realm, but Napoleon compels the dismissal of Stein in 1808.

1810. The French annex a large part of North Germany. (See FRANCE.) Prince Karl von Hardenberg becomes premier in Prussia.

1813. The Confederation of the Rhine and the kingdom of Westphalia are abolished; the **French are driven back to the Rhine.** (See FRANCE.)

1814. The **Congress at Vienna** begins November 3. By the enactments, signed June 9, 1815, Prussia regains possession of all her territories lost to France in 1806 and 1807, save East Friesland and Hildesheim. The Polish territory is partly recovered and constituted the grand duchy of Posen, and Dantzic is regained. Prussia also recovers Cleves and Neufchâtel, while Anspach and Baireuth are apportioned to Bavaria. Part of Saxony and portions of the dioceses of Treves and Cologne, Berg and Jülich and Swedish Pomerania, acquired by Denmark, are ceded to Prussia in exchange for Lauenburg, which goes to Denmark. Brunswick, Hesse-Cassel, and Oldenburg are established as independent states, and Hanover is made a kingdom. Hamburg, Bremen, Frankfort, and Lübeck regain their autonomy. Most of the Lower Palatinate is reunited to Bavaria. Baden is confirmed in the possession of Heidelberg and Mannheim. Würzburg is joined to Bavaria. The reorganized states unite in a German Confederation (Staatenbund).

In September, the monarchs of Prussia, Austria, and Russia unite in the **Holy Alliance** for enforcing the principle that changes in government are to "emanate from the free will and conviction of those whom God has made responsible" in the exercise of authority.

1816. A representative government is established in Saxe-Weimar by the grand duke, Charles Augustus. The **Diet of the German Confederation,** a body composed of delegates appointed by the rulers of the various states, opens its sessions, November 5.

1817. The Lutheran and Calvinist churches of Prussia unite to form the **United Evangelical church.** The three hundredth anniversary of the Reformation in Germany is celebrated.

1819. The German Confederation holds a congress at Carlsbad, in which the influence of **Metternich** predominates; resolutions to establish a censorship of the press are adopted.

1820. The congress at Vienna continues its sessions until May.

1821. A congress of the great powers at Laybach considers the revolutionary movements in Italy. (See ITALY.)

1827. Frederick Augustus I. of Saxony is succeeded by his brother, Anthony.

1830. **A revolution in Brunswick** causes the expulsion of Duke Charles, in September; at the same time radical agitations disturb Saxony and Hesse-Cassel, and in the following year William II., elector of Hesse-Cassel, is compelled to issue a new constitution; the government in Saxony is changed to a more democratic form.

1832. The liberals of Germany hold a congress at Hambach.

1833. Attempts to foment a revolution occur at Frankfort in April, but they are overcome and are followed by reactionary legislation. In Hanover, however, a liberal constitution is granted by the viceroy, the Duke of Cambridge. The **German Customs Union,** or **Zollverein,** is founded, as the result of the policy of Prussia.

1840. **Frederick William III. dies;** he is succeeded as king of Prussia by his son, **Frederick William IV.,** June 7.

1844. Multitudes of persons make pilgrimages to Treves to view the "holy coat"; a Catholic movement is begun under direction of Ronge.

1847. The united legislature, or *Landtag*, assembles in Prussia.

1848. **Revolutionary movements** of magnitude begin in Germany, as the result of the French revolution of this year. On February 27, a popular assembly gathers at Mannheim under the leadership of Itzlein, and insists on a German parliament, trial by jury, a free press, and the right of assembly and organization. On March 11, these changes are adopted in Hesse. On March 18, conflicts occur in the streets of Berlin; the King orders the troops to withdraw from the city, March 19, and anarchy reigns in the capital. On March 20, Louis I. of Bavaria abdicates in favor of his son, Maximilian II. On March 31, a preliminary parliament is opened in Frankfort under Karl Joseph Mittermaier as president, and it is ultimately resolved to convene a constituent assembly for the purpose of preparing a constitution for a German empire. Meanwhile insurrections occur in Saxony, Hanover, Nassau, and Mecklenburg, and in April the republicans of Baden rise, but they are soon suppressed by the troops of the confederation. A **German national assembly** or parliament meets in Frankfort, May 18, for the express purpose of preparing a constitution that shall not conflict with the individual constitutions of the various states concerned. John, archduke of Austria, is elected administrator of the empire by the assembly, and on June 11 he enters Frankfort. The confederate council dissolves and the first federal ministry is formed, with Schmerling of Austria minister of foreign affairs. A **tide of reaction sets in,** and in Prussia the troops enter Berlin without resistance, November 10. The national assembly removes the place of its session to Brandenburg.

In this year the Schleswig-Holstein war with Denmark breaks out; the conflict continues for three years. (See DENMARK.)

1849. The **constitution of the German Empire** is now completed, providing a diet, made up of a chamber of state, one half appointed by the governments, the other by the popular representatives of the states, and retaining monarchical powers with only a suspensive veto. On April 3, the crown is offered to the King of Prussia, but Frederick William declines the offer inasmuch as not all the states unite in the selection. The office of executive is abolished, in May, and a central power is established, its execution going to **Prussia** and to **Austria alternately.** A rising in Baden is subdued.

1850. On February 6, the king and legislature of Prussia make oath of allegiance to the new constitution of Germany, and **Prussia** begins operations for the purpose of establishing a **German federal state** in which **Austria** shall *not* be included. On March 20, a parliament assembles at Erfurt, and on April 27 a new German union is formed. A congress of the princes of the states is held at Berlin in May. Austria succeeds in securing the reopening of the Frankfort assembly, September 2. In Hesse strife arises over the constitution, and the country is declared to be in a state of war.

An open rupture between Prussia and Austria follows, but in the conference of Olmütz, November 29, Prussia yields to Austria.

1851. On May 15, the German Confederation, with the Diet, is restored.

1858. Prince William of Prussia is made regent for his brother, Frederick William IV.

1861. Prince William succeeds to the throne of Prussia with the title of **Wilhelm I.,** January 2.

1862. **Otto von Bismarck** becomes prime minister in Prussia.

1864. Prussia unites with Austria in another **war of Schleswig-Holstein with Denmark** (see DENMARK); by the treaty of Vienna, October 30, Denmark renounces Schleswig-Holstein and Lauenburg.

1865. Schleswig-Holstein is divided by the two powers, Prussia controlling Schleswig and Austria ruling Holstein, while Lauenburg goes to Prussia.

1866. **Austria** becomes involved in a **great war with Prussia,** the cause being the impossibility of proper German consolidation with two rival powers in the confederation. The smaller states of North Germany and Italy make alliance with Prussia: and Bavaria, Saxony, Hanover, Baden, Hesse, and Württemberg espouse the cause of Austria. On June 14, Prussia secedes from the confederation and immediately afterward invades Hanover and Hesse; Dresden is occupied on June 18. Bohemia is invaded, and on June 28, at Münchengrätz, the Prussians under Prince Frederick Carl rout an army of allied Austrians and Saxons. Two days later King William and **General von Moltke,** chief of the staff, leave Berlin for the seat of war. On July 3, the great **battle of Königgrätz** results in a complete victory for the Prussians; Prague is occupied and an advance made on Vienna.

Through French mediation the truce of Nikolsburg is signed, July 26. The army of the confederation under Charles of Bavaria wins a victory over the Prussians at Langensalza, June 27, but is afterward defeated and Frankfort is occupied by a Prussian force. In Italy the strife is indecisive. (See AUSTRIA, also ITALY.) On August 23, Prussia and Austria sign the **peace of Prague.** The Emperor of Austria recognizes the dissolution of the German Confederation; he consents to the formation of a new federation with Austria excluded, and permits the annexed states (among them Saxony) to form parts of the new **North German Confederation.** Schleswig-Holstein, Hanover, Hesse, Nassau, and the free city of Frankfort are incorporated with Prussia.

1867. The first Diet of the North German confederation assembles, February 24, and a constitution is adopted; the **presidency of the confederation** is united with the **crown of Prussia,** and Prussia is made to represent the confederation in all international relations. In the *Bundesrath* Prussia has seventeen votes, the total of the other votes being twenty-six. An imperial diet or *Reichstag* is constituted by manhood suffrage. The centralized military system is under the command of the King of Prussia, and **universal military service** is made compulsory. **Count Bismarck** is made **chancellor** of the confederation.

1870. **A war between France and Germany** (the Franco-Prussian) begins, caused by the election of Leopold of Hohenzollern to the throne of Spain, which is regarded by the French as the result of Prussian intrigues. (See FRANCE.) The French ambassador, Benedetti, demands of William I. that the Prussian king shall forbid the Prince of Hohenzollern to accept the proffered crown; but William refuses to do this. The prince, however, declines to accept, whereupon the French require of William a declaration to the effect that the King of Prussia will never permit *any* prince of the House of Hohenzollern to become a candidate for the throne of Spain. King William refers the ambassador of France to the ministry in Berlin. On July 19, a declaration of war is made by the French government. (See FRANCE.) In six weeks **France is invaded and overwhelmed** by the German armies. In November treaties are made by the North German confederation with the states of South Germany, and on December 10, **the unification of Germany** having thus been secured, the Diet of the North German confederation decrees **the restoration of the Empire.**

1871. All the sovereign princes and the three free cities offer the crown to William I. of Prussia; on January 18, in the palace of Versailles, the title and office of German emperor are restored.

The preliminaries of peace are signed with France at Versailles. **France cedes to Germany, Alsace** (with the exception of Belfort) and **German Lorraine,** with Metz and Diedenhofen, besides agreeing to pay an indemnity of five milliards of francs in three years, the payment to be secured by German occupation of French territory. On March 1, 30,000 German troops enter the city of Paris, but they evacuate it two days later. The first session of the *Reichstag* of the new German Empire opens March 21. In September the Old Catholics of Germany hold a congress at Munich. On May 10, the **peace of Frankfort-on-Main** is signed by France and Germany.

1872. In June the *Reichstag* passes an act abolishing all houses of the Jesuits and of affiliated religious bodies in Germany. **A rupture of relations with the Vatican** follows this legislation, and it is not until 1887 that modifications of anti-Catholic legislation are secured.

COPYRIGHT, 1909, BY G. & C. MERRIAM COMPANY,
SPRINGFIELD, MASS.
THE MATTHEWS-NORTHRUP WORKS, BUFFALO, N. Y.

1873. The German troops begin to withdraw from France in July, and the last body of soldiers returns to Germany on September 16.

1874. The Prussian government issues laws **against the Catholics** in May; the resistance of the clergy to these enactments leads to the passing of the civil marriage law and the civil registration of births and deaths. These laws are confirmed by the Empire, January 1, 1876.

1878. After the Turco-Russian war (see TURKEY and RUSSIA) a **congress of the powers** assembles at Berlin, under the presidency of Chancellor Bismarck, June 13, and a general treaty is signed, July 13. In this year, on May 4, an attempt is made upon the life of Emperor William by Hödel, and on June 2, Nobiling succeeds in inflicting a wound on the sovereign. These attacks are followed, in October, by **legislation** in the *Reichstag* directed **against the Socialists.**

1880. In June, a second conference of the powers assembles at Berlin to consider Turkish affairs. (See TURKEY.) An **anti-Semitic movement** is set on foot in Germany.

1881. Hamburg enters the *Zollverein*, but on the condition of being permitted to retain a free port for general commerce.

1883. **Germany** enters into an **alliance** with **Austria-Hungary** and **Italy,** thus forming the *Dreibund.* A law providing for the insurance of workingmen against illness is passed by the *Reichstag.*

1884. William I. confers with the Emperor of Austria-Hungary and the Czar of Russia at Skiernewice, September 15 to 17. A second law for the insurance of workingmen is passed. At the same time the Empire undertakes the work of **African colonization.**

1886. The *Landtag* of Prussia enacts measures for the purpose of Germanizing the Prussian territories in Poland.

1887. After fourteen years of conflict with the Vatican, the Prussian government is compelled to **abandon** the severest of its **measures against the Catholic Church.** The alliance with Austria-Hungary and Italy is renewed. The **Baltic ship canal** from Kiel to Brunsbuttel is begun by the Imperial Government.

1888. The **Emperor William I. dies,** March 9; he is succeeded by his son Frederick, who takes the title of **Frederick III.** After a reign of ninety-nine days, Frederick dies, on June 15, and his son, **William II.,** becomes the German emperor, or in German phrase *Der Deutsche Kaiser.* Germany assumes an aggressive policy in **Samoa,** but is checked by the United States. (See HAWAII and UNITED STATES.) The German East African company engages in a struggle with the Arabs in Zanzibar. (See AFRICA.)

1889. The *Reichstag* enacts a law compelling the **insurance of workingmen** from disabilities caused by old age or accidents. A conference for the adjudication of affairs in Samoa is held in Berlin by Germany, the United States, and Great Britain. The alarming difficulty is amicably settled.

1890. An international conference assembles in Berlin to consider questions affecting the **working classes.** A startling disagreement of the Emperor and Chancellor Bismarck is announced. The rupture leads to the **resignation and retirement** of **Prince Bismarck,** March 18, and the nomination of **General Georg Leo von Caprivi** as his successor. Great gain is made by the Radicals and Social Democrats in the elections; also an increase in the representation of the Clericals, or Church party.

1891. The rupture between Prince Bismarck and the Imperial Government assumes a threatening aspect. The important **Triple Alliance** of the German Empire, Austria-Hungary, and Italy, designated as the *Dreibund,* is renewed in June. Commercial treaties on the principle of reciprocity are formed with a number of the European States.

1892. The Government makes strenuous endeavors to pass a severe **Army bill,** against the Liberals and Parliamentary Center backed by the influence of Prince Bismarck; Prince Bismarck speaks with audacity and anger against the imperial policy. The agitation known as the **Anti-Semitic War** is revived on account of the supplying of arms to the army by the Jewish Loewe Company. The Emperor in audacious speeches defends the measures of the Government. In August the Asiatic cholera, making its way westward, reaches the western harbors and becomes epidemic in Hamburg and Antwerp; the ravages of the disease are stayed in October.

1893. **German Socialism** emerges with great vigor and asserts itself in the Reichstag; a great debate of five days' duration occurs in which the cause of Socialism is ably supported. The Reichstag rejects the Army bill and is dissolved by the Emperor on May 6. On May 18, a commercial treaty is made with Spain. July 15, the new Reichstag **passes the Army bill.** Labor troubles abound throughout the Empire, and the anarchists riot in Breslau, on June 20.

1894. January 26, a formal reconciliation is effected of the Emperor and Prince Bismarck; the latter by special request visits the Kaiser.
The Emperor's autocratic temper leads to a break with the Chancellor von Caprivi and the latter resigns, to be succeeded by the **Prince Hohenlohe Schillingsfürst.**

1895. June 20, the **great Baltic ship canal** is formally opened with an international pageant.

1896. January 3, Emperor William congratulates President Kruger of the South African Republic on his victory over Jameson's force; the message is interpreted as hostile to Great Britain.
March 13, great excitement is caused in the German Reichstag by Herr Bebel, who accuses of murder Dr. Carl Peters, the explorer. April 14, the German Emperor is welcomed in Vienna by the Emperor of Austria.
October 20, Emperor William receives a visit from the Czar of Russia.
November 16, the Government is challenged in the Reichstag concerning Bismarck's disclosures affecting the imperial administration.
December 7, a prosecution of the German newspaper editors for libeling the minister of foreign affairs, Baron von Bieberstein, and others, results in the conviction of all the accused except one.

1897. February 9, the strikers in the dockyards at Hamburg make a riot in which two men are killed and nineteen seriously wounded.
March 22, a monument commemorating the centenary of the birth of Emperor William I. is unveiled in Berlin.

1898. July 30, Prince Bismarck dies at Friedrichsruhe, aged 83.

1900. New German code of laws goes into effect, January 1.

1901. January 18, the bicentenary of the coronation of Frederick I. of Prussia is celebrated.
August 5, Empress Dowager Frederick dies.
The failure of the Leipziger Bank is followed by a series of failures and severe **financial depression.** Bad harvests add to the trouble; 80,000 men out of employment in Berlin.

1902. June 28, the **Dreibund,** or alliance of Germany, Austria-Hungary, and Italy, is **renewed.**
December 14, a new tariff bill is passed. It places higher duties on farm products, and is in many ways favorable to agrarian interests.

1903. In February the government decides to **readmit the Jesuits,** who have been excluded since 1872. In the Reichstag elections of June the Socialists gain 25 seats.
September 21, an electric car on the Marienfelder-Zossen experimental line attains a speed of 125 miles an hour.

1904. In January the seats of 81 members of the Reichstag are contested on the ground of irregularities in the elections.
Several commercial treaties are concluded during the year, including one with Russia which is signed July 28. Evidence of official sympathy with Russia causes sharp debates in the Reichstag, and arouses much feeling.

1905. **Disagreement with France over the Moroccan question.** The government takes advantage of the war in the Far East to strengthen friendly relations with Russia. Colonial affairs cause anxiety, especially in connection with the revolts of the natives in East and Southwest Africa.
The strike of 200,000 miners in Westphalia, lasting from January 8 to February 9, is finally settled by the promise of remedial legislation.

1906. February 23, the Reichstag votes to extend existing tariff arrangement with United States until June 30, 1907.
December 13, the Emperor dissolves the Reichstag because it refuses to appropriate $7,500,000 additional for the war in German African colonies.

1907. January 25, elections for the Reichstag result in large gains for the supporters of the Emperor's colonial, military and naval policy. The Socialists lose two seats.
In November the Emperor visits England, arriving at Windsor on the 11th.

1908. January 3, Maximilian Harden on conviction of libeling Count Kuno von Moltke is sentenced to four months' imprisonment, which verdict the Supreme Court annuls on May 23, ordering a new trial.
January 10, in Berlin, Socialist crowds demand universal suffrage. They are suppressed by the police. There are similar disturbances on January 12 and March 19, in which many persons are injured.
January 21, **parade of 50,000 unemployed** in streets of Berlin.
June 3, **five Socialists are elected** to the Prussian Chamber of **Deputies,** the first time a Socialist has been chosen to this House.
July 1, **Count Zeppelin** remains in the air twelve hours in his dirigible balloon, carrying fourteen men and maintaining an average speed of about thirty-four miles an hour. This airship on August 6 after a flight of twenty-three hours is destroyed by fire while being repaired at Echterdingen. A national subscription enables Zeppelin to continue his experiments. July 23, the Wagner Festival begins at Baireuth.
August 3, Emperor William visits Stockholm. August 11, the **Emperor and the King of Great Britain meet** at Kronberg.
August 30, first **International Baptist Conference** in Europe at Berlin.
October 23, Count Zeppelin's new airship makes successful flight with ten passengers from Friedrichshafen.
October 28, the London *Telegraph* publishes an account of an **interview with the Emperor William.** This "studied indiscretion," designed to make clear his friendship for Great Britain, arouses intense indignation throughout the Empire. The Chancellor, Count von Bülow, tenders his resignation, which is declined. On November 10, there is heated discussion in the Reichstag over the incident. For the first time a German Emperor is made personally the subject of public debate in the Reichstag. On November 17 at the close of an interview with the Chancellor, the Emperor formally promises that he will not henceforth act or speak on matters affecting the foreign relations of the Empire except through the Chancellor and his associate Ministers. This assurance is accepted in the Reichstag as closing the incident. The Chancellor retains office.
November 12, through an explosion of the Radbod mine in Westphalia 339 miners lose their lives. Only six are uninjured out of 40 who are rescued.

1909. February 9, King Edward and Queen Alexandra, of Great Britain, arrive at Berlin on a visit to the Kaiser and receive a cordial popular welcome. February 9, an agreement with France regarding administration of affairs in Morocco is signed.
February 10, Ernst Haeckel celebrates his 75th birthday and resigns his professorate at Jena amid tributes of wide and great respect.
May 31–June 1, the Zeppelin dirigible balloon makes a flight of more than 600 miles, remaining in the air about thirty-four hours. On descending it sustains considerable damage.
July 14, Dr. Theobald von Bethmann-Hollweg is appointed chancellor to succeed Prince von Bülow.

GERMAN COLONIES AND PROTECTORATES.

THE German Empire has a number of dependencies, called by various names, in Asia, Africa and the Pacific, all acquired since 1883. With military uniformity they are under practically the same form of government. Each is administered by an Imperial Commissioner, in almost every case assisted by a council. In their acquisition Germany had a threefold purpose: to retain on German territory such of her rapidly increasing people as wish to emigrate; to develop and expand German trade; and to increase the prestige of the German flag. At the same time there is no one of these territories that has not been materially benefited by passing under German control.

The area of these dependencies is estimated at 1,027,820 square miles, and the native population at about 12,000,000.

Kiauchau, a protectorate in China, on a bay of the Yellow Sea, was acquired in 1897 and confirmed to Germany on a 99 years' lease in the following March. Its main importance is strategic, though various industries, as silk making, coal mining, and brewing, are carried on. The town of Kiauchau is a free port and has a floating dock. The area is about 200 square miles, inclosed on the landward side by a neutral zone. The population is 33,000, of whom about one thousand are whites.

Togoland, in Africa on the Gulf of Guinea, area 33,700 square miles and population about 1,000,000, was acquired in 1884. Its productions are tropical. Since the German occupation coffee, cocoa, cotton and palm plantations have been started and experiments made in developing various native plants. Government schools have been founded in addition to the 150 mission schools. In 1907 there were 288 foreign residents, of whom 273 were Germans.

Kamerun, in Africa on the Bight of Biafra, area 191,930 square miles, population 3,500,000, was acquired in 1884. It exports rubber, palm kernels, cocoa, palm oil and ivory. There is a large governmental experiment station for the cultivation of spices. In the schools of the four missionary societies in the colony, are 16,000 pupils. The government also has a number of schools. In 1907 of the 1,010 foreign residents, 860 were Germans.

German Southwest Africa, area 322,450 square miles, population 200,000, was acquired during 1884–1890. A large part of this region is dry and barren, there being no natural supply of water. German enterprise has sunk artesian wells, introduced experimentally the culture of the silkworm, of the vine, tobacco and cotton plants, improved the native breed of live stock and established excellent experiment stations for agriculture, forestry and gardening. Rubber, copra, insect wax, coffee, and ivory are exported. Three missions and the government support schools. In 1907 there were 2,629 European inhabitants, of whom 1,656 were Germans.

German East Africa, a protectorate on the Indian Ocean, area about 384,180 square miles, population 7,000,000, was acquired in 1885–1890 from the Sultan of Zanzibar by purchase. Eight Protestant and three Catholic missionary societies have established many schools. So too has the government. The natural resources are as yet undeveloped, but experiment stations and plantations have been set out for raising coffee, cocoa, vanilla, caoutchouc, sugar, tea, cotton, and spices. In the Protectorate in 1905 there were over 500,000 head of cattle and about 3,500,000 sheep and goats. In 1907 the European population was 2,629, of whom 1,656 were Germans.

In the **Pacific Ocean** Germany owns islands with a total area of 96,160 square miles and a population of about 400,000.

Kaiser Wilhelm Land, the northeastern quarter of New Guinea, area 70,000 square miles, population 300,000, was acquired in 1884. The material interests of the Protectorate are in charge of the German New Guinea Company, but the governor is the imperial commissioner. In the island are found many valuable woods. Copra, mother-of-pearl, and trepang are exported. There are schools maintained by three Catholic and two Protestant missions, and by the government. In 1907, of 182 white inhabitants, 162 were German.

The **Bismarck Archipelago** is the name given to several groups of islands east of New Guinea, area 20,000 square miles, acquired in 1885. The products are copra, cotton, coffee and rubber. In 1907, of 360 white inhabitants, 255 were German.

The **Solomon Islands**, southeast of Bismarck Archipelago, area 4,200 square miles, were acquired in 1886. The eastern islands of this group were ceded to Great Britain in 1899 in return for the cession to Germany of British rights in the Samoan Islands. Tortoise shell and sandalwood are exported.

The **Caroline** and **Pelew Islands**, area 560 square miles, and the **Mariana or Ladrone Islands**, area 250 square miles, lying directly east of the Philippines, were ceded by Spain to Germany in 1899 in consideration of the payment of 16,810,000 marks. Guam, the largest of the Marianas, has been retained by the United States in accordance with the treaty of Paris in 1898. The Carolines and Pelews are mostly coral islets. Copra is the main export. The population of the groups in 1904 was 15,301; of 168 whites, 111 were German.

Marshall Islands, area 150 square miles, are still farther east. There are Catholic and Protestant missions. They were acquired in 1886. In 1907, of 193 European inhabitants, 76 were German.

Samoan Islands, formerly called the Navigator Islands, lie in Polynesia, south of the Equator. Germany, Great Britain and the United States formerly had equal rights in this group, but in 1889 Great Britain ceded her claims to Germany in return for several of the Solomon Islands. By agreement in 1900 between Germany and the United States, the islands west of the meridian 171 degrees east of Greenwich were assigned to Germany, the United States retaining those to the east of that meridian. The area of German Samoa is about 1,000 square miles. Copra and cocoa beans are the principal products. American, English and French missionaries maintain schools, as does the government, and have brought the natives into nominal acceptance of Christianity. The inhabitants by census of 1906 were 33,478. Of the 455 whites, 248 were German.

GREAT BRITAIN AND IRELAND.

THE year of the general pacification of Europe found ENGLAND at the culmination of her internal struggle. That strife had been confused and embittered by the mixture of a religious with a civil quarrel. Politically, there was the effort on the popular side, led by patriots like Hampden and Pym, to maintain and broaden the precedents of parliamentary government and law-guarded liberty; on the part of Charles I. there was the attempt to concentrate all authority in the personal prerogative of the monarch. Mixed with this controversy was the attempt of each party to impose its own exclusive character on the Church of England.

A substantial victory was already won for civil liberty in the election of the Long Parliament; but the quarrel was pushed to extremity by religious zeal and party passion. Charles I. was dethroned and beheaded; and the only escape from general confusion was found in the personal will and control of a master spirit, Oliver Cromwell. When the Lord Protector died the nation was weary of the interruption of its old constitutional forms, and of the excessive religiosity of its new rulers, and welcomed back the Stuart line in the person of Charles II.

Charles was a selfish and indolent voluptuary, and his reign was thoroughly ignoble, with a corrupt court, a debased literature, and a reaction from Puritan severity into license. But Charles had learned much from his father's fate, and he never ventured openly to thwart the national will or to override the decisions of parliament. His brother and successor, James II., was an avowed Catholic, as Charles had been a secret one; and zeal for his religion impelled him to encroach upon the laws. The assault on its Protestantism and its constitution roused the two strongest sentiments of the English people, and James was driven from the throne.

The revolution of 1688, however, was conservative; Mary, a daughter of James, and her husband, William of Orange, were jointly enthroned; the succession was settled upon a collateral line of the Stuart house; and no radical changes were made in the forms of government. This exercise by parliament of the right, in extremity, to depose and replace a sovereign was the decisive victory of English constitutional liberty in the Whig revolution at the close of the seventeenth century. It virtually acknowledged the elected representatives of the people as the final depositary of supreme power.

The personal character of William III. had its chief influence in English affairs by impressing a religious toleration which accorded well with the cooler temper that was succeeding in the popular mind to the theological rancors of the past. The hand of William's government was felt for good in Massachusetts, where a new charter, while confirming the colonial liberties, put an end to the church-membership test for voters and to religious persecutions. The successors of William on the English throne, Anne and the Georges, accepted loyally the established constitution. Henceforward the executive control gravitated more and more into the hands of the prime minister of the day, who was dependent for his position on a parliamentary majority, and in an ever-lessening degree on the personal favor of the sovereign.

Thus England, with internal peace and order, with a mixed constitution in which the popular element steadily gained on the monarchic and aristocratic, and with religious toleration (though by no means as yet religious equality), entered on a long period of substantial prosperity at home and growth abroad. The good fortune of the realm was shared in full degree by Scotland, which by the Act of Union of 1707 was fully incorporated with England; but unhappy Ireland remained a victim of conquest with the violent prejudices of race and religion bequeathed from earlier struggles.

The eighteenth century was marked for the English people by a vast colonial expansion in America and India, and by an industrial development of the most far-reaching consequence. The colonization was of two types — by conquest and by settlement. Of the first the chief instance was India, which was rapidly subjugated in the interest mainly of a great commercial enterprise, the British East India Company, and with the violent extrusion of the French. The result to the native peoples was the establishment of a foreign rule, which was just and beneficent in comparison with the preceding Oriental tyrannies.

Of colonization by settlement the chief field was North America, where in this period there was rapid increase from the stock transplanted in the century before, though with little new migration. England and France wrestled fiercely for the possession of the North American domain. On the St. Lawrence and the Hudson the two civilizations strove with each other. The French colonists in America had counted among their pioneers a fair share of heroic leaders and saintly missionaries; but the control, the impulse, the support, had been from a king across the ocean. The English Americans, bred in a sturdy self-reliance, and their mother country, led by the fiery genius of Chatham, won the victory and the continent.

England, however, like all other nations of the time, held her colonies as in a commercial sense her own feeders and tributaries. The commercial restrictions were tightened and aggravated by the disposition of the third King George toward personal tyranny whenever he could safely exercise it. The growing strength and spirit of the colonists rose in self-assertion, and a seven-years' war gave them independence. The scale was turned against Great Britain by the interposition of her old adversary, France. But from loss and defeat she recovered with wonderful energy, and under the younger Pitt promised advances in political and economical reform. Then the shock of the French Revolution drew her again into a combat which was prolonged and intensified as she became the leader of the nations and at last of the peoples of the continent, against Napoleon. When final victory came at Waterloo, the struggle against a revolutionary power had hardened the ruling classes of England into hostility and dread of all serious innovations. For a few years the temper of the government was strongly conservative and reactionary. But the rising tide of democracy could not long be stayed.

That tide was fed by many springs. In the eighteenth century thought had taken a new and wider range. The passionate aspirations which in France broke out in volcanic fury had their counterpart in the more sober mind of the English people. Christianity, while its dogmas had been freely discussed and questioned, had shown its best energy in the missionary fervor of Methodism; in the reform of criminal law; and in a new zeal for the imprisoned, the enslaved, the suffering.

English society, meanwhile, was slowly transformed by a vast industrial development, which came through the employment of canals for transportation, the invention of textile machinery, and the utilization of steam. The first effect was the growth of a new aristocracy of wealth, where there had been before only an aristocracy of birth. The next effect was the stimulation of impulse in the laboring class, who were coming into new importance. In all these ways England showed the world-wide movement of the time.

The first great political advance, when the reactionary temper of the Napoleonic wars had spent itself, was the broadening of parliamentary representation by the Reform Act of 1832. Soon came the abolition of slavery in the West Indies. An agitation for popular rights took acute form in the Chartist movement and seemed at one time to threaten revolution. But the nation met the emergency with that mixture of practical sense, mutual concession, and stolid strength which has so often saved England from disruption. The protective duties on grain were abolished by Sir Robert Peel against the resistance of farmers and landlords and the angry protest of the Conservative party, of which he had been the leader.

From that time to the present the difference between Conservative and Liberal parties in England has been only a difference in the degree of progress. The franchise has been repeatedly widened; legislation for the protection of the laborer has steadily broadened its scope; the wrongs and burdens of Ireland have been mitigated; the whole spirit of legislation has grown more humane. The long reign of Victoria, splendid in many achievements of many men, was above all illustrious in the orderly and peaceful progress, in the recognized rights and the solid advantage, of the common people.

It has been a splendor of peace rather than of battle. Since Waterloo, the serious military encounters of Great Britain have been the Crimean War, the Indian mutiny, and the war in South Africa. There has gone on a great colonial expansion; a new empire has grown up in Australasia; Africa has been parceled out with the other European powers; Canada has become a mighty dominion. The earth hunger, personal and national, the merchant seeking a market, the statesman seeking power, the settler seeking a home, have all been influential in carrying English speech and institutions into all the world.

In this very expansion, however, have come perils which England keenly feels, surrounded as she is by rivals whose military strength, under their conscription systems, far exceeds hers. At home, the struggle between her social classes — the capitalist and the laborer, the rich and the poor — grows sometimes acute and menacing. But the English people are to-day the possessors not only of a great history but of a great promise. Wherever the flag of Great Britain floats, it is a symbol of civilization and guarantee of progress.

Government. The king reigns but does not govern. The supreme legislative authority of the British Empire is vested in Parliament. Parliament consists of the House of Lords and the House of Commons. The membership of the House of Lords in 1908 was 617, of whom 547 were English peers, hereditary or by royal creation, 26 prelates of the Church of England, 28 Irish peers, chosen for life, and 16 Scotch peers, chosen for that parliament. The membership of the House of Commons was 670, of whom 405 were for England, 30 for Wales, 72 for Scotland and 103 for Ireland. All were elected by voters possessed of a small property qualification, except that 9 members represented and were chosen by the Universities. Parliament meets annually, its members serve without pay, and the House of Commons lasts for seven

years unless it be sooner dissolved. Practically the executive head of the nation is the Prime Minister, appointed by the monarch; but the monarch really has no option except to name the chief of the party which can command a majority in the House of Commons.

The Prime Minister shares his authority with a Cabinet of heads of departments, whose number varies and all of whom are appointed on his recommendation. He acts as leader of his party on the floor of the Commons or the Lords. Whenever a Ministry is defeated in the Commons upon an essential measure, usage requires, either that the ministers resign and the sovereign appoint a ministry from the opposite party or that Parliament be dissolved and a new election held, the result of which determines the political character of the Commons and hence to which party the ministry shall belong. The practical guarantee of this dependence of the executive upon the Commons is in the power of that body to refuse supplies and so disable the ministry. The Lords are theoretically coördinate with the Commons, but they seldom venture on prolonged dispute with the popular branch on an important measure. The members of the Cabinet were, in 1907: Prime Minister and First Lord of the Treasury; Lord President of the Council; Lord High Chancellor; Lord Privy Seal; Secretary of State for Foreign Affairs; Secretary of State for India; Secretary of State for the Home Department; Chancellor of the Exchequer; Secretary of State for the Colonies; Secretary of State for War; First Lord of the Admiralty; Chief Secretary to the Lord Lieutenant of Ireland; President of the Board of Trade; President of the Local Government Board; President of the Board of Education; Secretary for Scotland; President of the Board of Agriculture and Fisheries; Postmaster-General; Chancellor of the Duchy of Lancaster; First Commissioner of Works. Several of the highest officials were not at that time in the Cabinet, for example, the Lord Lieutenant of Ireland and the Attorney-General.

As to local government, while Parliament is supreme, the municipalities and parishes are allowed to exercise a large independence, and yet Parliament in the main regulates local as well as general affairs. It is the tendency, as by the London Government Act of 1899 and other acts, to increase the municipal control and administration.

Industry and Labor. The industrial power of Great Britain is most apparent in manufactures and commerce. The agricultural interest of the nation has long been depressed, owing partly to competition from abroad (against which the protective laws made a barrier which was overthrown in the interest of the consumer, — the inauguration of British "free trade") and partly to the factitious value of land, from the social importance connected with its possession. But in the working of metals, the production of textile fabrics, of machinery, of manufactures in general, England has taken a leading part from the beginning of the modern industrial epoch until the present day, when she finds herself hard pressed in the contest for the world's markets by her rivals, and especially by Germany and the United States.

In commerce, however, England has retained the old superiority belonging to an insular nation. Upon the conditions of her laboring class the growth of manufactures and the mechanic arts has had a great effect. The British artisan is more self-assertive and keen-witted than the peasant. The aspirations of the laborer have been shaped not by theoretic socialism as in Germany but by practical coöperation, especially in trades-unions. These associations have reached a higher and more beneficent stage in England than in any other country, and have largely worked beyond the crudities and cruelties of the early stage. But they have been met by efficient and formidable combinations of employers, and the struggles occasioned by great strikes are momentous and significant. Hitherto the same practical sense and moderation which have won success in civil government for the English race have guided these labor struggles toward beneficent results. The English workingman stands incomparably stronger than a hundred years ago; his progress has wrought no harm or danger save to feudal and outgrown institutions.

Religion. England has still her Established Church, as from the day when Henry VIII. made himself its head instead of the Pope. The state control is most apparent in the appointment of the bishops by the ruling Prime Minister. Save in its revenues, its honors, and its social prestige the prerogatives of the church have been reduced until its members have little practical advantage over their neighbors. The dissenting bodies have grown strong ever since that crisis in which the expulsion of the Puritan and Presbyterian elements under Charles II. threw them on self-support. The old mutual hostility has softened, and Churchmen and Dissenters have shared alike in the intellectual, ethical, and spiritual influences of the new time.

In Scotland the Established Church is Presbyterian. The United Free Church, resulting from the union in 1900 of the Free Church and the United Church, both of which were constituted by secessions from the Established Church, is a body nearly as strong if not stronger. Next in number are the Roman Catholics. In Ireland, an Established Church, Protestant and Episcopal, which represented only a small minority of the people, was maintained by British authority until the establishment was abolished by the Gladstone government in 1869. Wales also has an Established Church, while the bulk of the people are Protestant dissenters.

Education. Until a very recent period England lagged far behind in public education. For the well-to-do there was munificent provision in the endowment of universities, colleges, and schools; and both the Established and Dissenting Churches gave some gratuitous education to the poor. A new era began with the Education Act of 1870, which has since been modified many times, notably by the Education Act of 1902. In 1906 a broad provision was made for the general establishment of free schools; Government in some cases contributing to the support of church and other private schools, on condition of certain tests and examinations, and in other cases establishing purely public schools. This system is complicated, and has involved frequent disputes, especially on the difficult question of religious teaching, but the general result has been a great improvement of popular intelligence. With this governmental effort has coöperated the great development of philanthropic work; the missions, shelters, reformatories, settlements; so that even in the great cities figures show within the last quarter of a century a marked decrease of crime. In 1907 there were of elementary schools in England and Wales 20,986, in Scotland 3,285 and in Ireland 8,538. In 1905 in England there were 39 schools for the blind, 54 for the deaf and 145 for the defective or epileptic. The enumeration of the higher institutions, culminating in the Universities of Oxford, Cambridge, and London University in England, of St. Andrews, Glasgow, Aberdeen and Edinburgh in Scotland and of the University of Dublin and the Royal University in Ireland, is beyond our scope.

Defense. Great Britain's insular position delivers her, as long as she maintains her supremacy on the sea, from the burden of a large standing army. In consequence the British subject can enjoy a less restricted freedom and a larger opportunity for an undisturbed industrial career.

By Army orders of January, 1905, and January, 1907, the British Isles are divided into seven "commands" or military districts. London constitutes a separate district. This arrangement, it is supposed, will render more efficient the proposed "Territorial Army." The regular army is recruited by volunteers. The men serve seven years in the ranks and five in the reserve, except that cavalry service is eight years and then four in the reserve. In 1906, of the regular army, 125,622 men were serving abroad and 126,756 were at home. In 1908 the strength on a war footing was estimated at 739,045 men. The organization of the territorial army was begun in 1908. It follows the volunteer principle and is yet a military experiment.

If, with safety, Great Britain can permit her army to be smaller than that of any other great European power, she is compelled to devote correspondingly increased attention to her navy. Upon her navy the very life of her empire depends. The "two power" principle has controlled construction; that is, that the British navy should be equal to the two strongest foreign navies combined. It is commonly held that it should be even ten per cent stronger, and the prime minister maintains it should be twenty-five per cent stronger, than the combined strength of the two most powerful foreign navies. It is estimated that the tonnage of British war vessels in 1909 will amount to 1,821,610 tons, which would be about 13 per cent greater than the combined war tonnage of the two states next in naval strength, France and the United States. Also some of the fastest ocean lines are subsidized for use in event of war. The British navy was manned in 1908 by 128,000 men of all ranks. It comprised in 1908, 54 battleships (6 building), 32 armored cruisers, 52 protected cruisers, 24 torpedo gunboats (1 building), 149 destroyers (5 building), 98 torpedo boats (12 building), 1 torpedo ship, 49 submarines (20 building).

The area of the United Kingdom is: England and Wales, 58,626 square miles; Scotland, 30,405 square miles; Ireland, 32,360 square miles; in 1908 the population was: England and Wales, 35,348,780; Scotland, 4,826,587; Ireland, 4,363,351; giving a total area of 121,391 square miles and a total population of 44,538,718, exclusive of sailors and soldiers abroad.

1649. **King Charles I. is put to death,** and England is declared to be a **commonwealth.** The army of Independents under **Oliver Cromwell** becomes the controlling power; the Long Parliament is the formal legislative authority, and a council of state, of forty-one members, is the formal executive. The office of king is abolished, and with it the House of Lords. **Charles II.** is proclaimed king in Edinburgh, February 5, and a rising in Ireland supports his claims; Cromwell leads a force into Ireland in September, captures Drogheda, and massacres the garrison, September 12.

1650. Cromwell returns to England in May, while Ireton remains in command of the troops in Ireland; the insurrection there continues for nearly three years. Montrose lands with a royalist force in Scotland, but is defeated, captured, and put to death, May 21. Charles himself reaches Scotland, June 24; he subscribes to the Covenant, and is hailed as king. Cromwell marches into Scotland with 16,000 men, and overwhelms the forces of Leslie at **Dunbar,** September 3; Edinburgh and Glasgow surrender.

1651. Charles is crowned at Scone, January 1, and enters England in July, but is routed by Cromwell at **Worcester,** September 3, and flees to France. In this year the **first Navigation Act** is passed, forbidding the importation of goods into England except in English vessels or in the vessels of the country producing the goods.

1652. This act leads to a **war with the Dutch,** who are the chief carriers of Europe; there is a series of naval engagements in the Channel, in which the English are victorious; a treaty of peace is made in April, 1654.

1653. Cromwell dismisses the so-called Rump Parliament and the council of state April 20, and assembles the **"Barebone's" Parliament** of 140 members, appointed by himself, July 4. On December 12 this parliament resigns its powers into the hands of Cromwell, and on December 16 he becomes **lord protector** of the commonwealth of England, Scotland, and Ireland, under a constitution which vests the executive in the protector and a council of twenty-one; a standing army of 30,000 men is also established.

1654. Cromwell, becoming dissatisfied with the parliament, commands an exclusion of the members, and secures a new body, which makes the office of protector elective.

1655. In January, Cromwell dissolves parliament. **Blake,** in April, leads the English fleet to an attack on **Algiers, Tunis,** and **Tripoli,** and punishes them severely; Jamaica is captured in the same month by a force sent to make reprisals in the **West Indies.**

In March, April, and May there is an uprising in Salisbury under **Penruddock,** but it is suppressed, and the leader is put to death.

In October the **Pacification of Pinero** is arranged with France, by which it is agreed that Charles, the Pretender, shall be banished from French soil. In November severer measures are proclaimed by Cromwell against **Catholicism** and **Episcopacy;** priests are to be banished and Anglican clergymen are commanded to refrain from public ministrations; a censorship of the press is also declared; these measures are but feebly enforced.

1656. **War** breaks out **with Spain,** and on September 9 the English fleet captures treasure ships near Cadiz. In September, the second parliament of the Protectorate meets.

1657. **A plot** against the Protector is formed, only to be discovered; its projector, **Nayler,** is apprehended. The **first constitution** is now **amended;** a second house is instituted, and the Protector is denied authority to exclude members of the parliament. **Toleration in religion** is granted, "so that this liberty be not extended to Popery or Prelacy." The title of king is offered to Cromwell in May, but he refuses to accept it.

Admiral Blake is victorious in a naval engagement against the Spaniards off Santa Cruz, April 20; he dies August 17.

1658. In May the English and French unite in an attack on Dunkirk, and a relief force of Spaniards is routed at the **Battle of the Dunes,** June 4; this is followed by the capitulation of the city, June 17.

September 3 **Cromwell dies,** and his son, **Richard Cromwell,** becomes lord protector.

1659. The new parliament meets in January, but the disagreements that arise between it and the army cause the Protector to dissolve it, April 22; forty-two members of the remnant of the Long Parliament which had been called the "Rump" come together at the invitation of the army. The **young protector,** however, finding his position among opposing factions too difficult, **resigns** May 25. The army expels the parliament October 13, and a military committee of safety is placed at the head of affairs. This is much opposed, and the Rump Parliament is again restored December 26.

The **Treaty of the Pyrenees** is concluded.

1660. **Monk,** afterwards duke of Albemarle, marches his forces from Scot-

land to London, and takes control of the government, February 3, becoming captain general. March 16 the Long Parliament dissolves itself and makes provision for a new parliament to meet April 25. By the **declaration of Breda,** April 14, Charles announces a pardon to all not under special condemnation, and promises religious toleration; the Convention parliament (so called because not summoned by the king) approves this proclamation May 1; May 8, **Charles II. is announced as king;** he enters London May 29, although not crowned until April 23 of the following year. James, duke of York, brother of the king, is made lord high admiral and warden of the Cinque Ports; Monk becomes captain general, and the Earl of Clarendon, the chancellor and prime minister of the kingdom. The feudal rights of knight service, wardship, and purveyances are done away, and in their place a yearly income of 1,200,000 pounds is given to the king. The bishops are restored to their sees, and an act of indemnity for political crimes from 1637 to 1660 is passed, the regicides only being excluded from its provisions. The army is disbanded.

1661. An insurrection (that of the **Fifth Monarchy Men**) occurs in London in January. On January 30, the anniversary of the execution of Charles I., the bodies of Cromwell and others are exhumed and shamefully dishonored. In Scotland a royalist parliament assembles, and the **Covenant is abolished;** all legislative acts of the last twenty years are repealed. **Argyle** is executed, May 27. In London, the Soleman League and Covenant is publicly committed to the flames. November 20, the Corporation Act is passed, compelling all magistrates and municipal officers to take the sacrament according to the ritual of the Church of England, to abjure the Covenant, and to take an oath declaring it illegal to bear arms against the king.

1662. **Charles II.** weds **Catherine** of Bragança, daughter of John IV. of Portugal, May 20.

The **Act of Uniformity** comes into force August 24, by which it is required that all the clergy, fellows of universities, and teachers must assent to the whole book of common prayer; by this act 2,000 Nonconformists are deprived of their livings.

In November, **Dunkirk,** the property of England since the treaty of the Pyrenees, is sold to France for 400,000 pounds.

1663. The Fifth Monarchy Men again rise in the north of England, but ineffectually.

1664. This insurrection results in the **Conventicle Act** of May, by which it is decreed that more than five persons shall not meet for worship, unless in a household or according to the rites of the established church.

In August **New Amsterdam** in America is captured by the English under the colonial governor Nicolls.

1665. This leads to a declaration of **war with Holland,** February 22. The war is favored by Charles for the sake of his nephew, the Prince of Orange, who hopes to place himself at the head of the Netherlands; all England encourages the war through envy of the commercial prosperity of the Dutch. The result of the three years' war is the exhaustion of both countries.

The **Plague** rages in London in April.

1666. The **Great Fire** of London begins September 2, and continues for more than a week, desolating a thickly populated area of five hundred acres.

The **Covenanters** in Scotland **revolt** under Dalziel, but are overcome at the battle of Pentland Hill, November 28.

1667. The Dutch fleet fires Sheerness, and sails almost to London in June; the war is ended July 21, by the **treaty of Breda,** by which England, Holland, France, and Denmark adjust their differences. France cedes to England Montserrat, Antigua, and part of St. Christopher's, and receives Acadia; England and Holland remain as by former treaty, save that Holland has Surinam, England retains New Amsterdam, and the Navigation Act is modified in favor of the Dutch.

The **Earl of Clarendon,** the chief errors of the government being laid to his charge, is **impeached and banished** from England in August. A new ministry is formed by Clifford, Arlington, Buckingham, Ashley, and Lauderdale, known as the **Cabal,** from the initials of its members.

1668. England, Holland, and Sweden, alarmed by the victories of the French in their war for the possession of Flanders, form a **triple alliance** against Louis XIV., January 13.

1670. Charles II., influenced by his sister, Henrietta, duchess of Orleans, enters into a **secret treaty** with Louis, by which it is agreed that the English king and the Duke of York shall embrace the Catholic faith as soon as possible, and that the support of England shall be given to France in a war against Spain and Holland; reciprocal aid is promised to Charles. The Duke of York professes the Catholic religion, but the King delays his confession until he comes to his deathbed.

1671. The battle of Solebay is fought by the English and Dutch fleets.

1672. Charles closes the exchequer in order to secure money, and thus gets £1,200,000; his action creates a panic. In March of this year the Declaration of Indulgence is issued, a measure favorable to Catholics; the King rescinds it a year later, owing to the opposition of parliament.

March 17, a **war with Holland** begins; the English fleet is victorious at Southwold Bay, May 28, and a treaty of peace is signed at Westminster two years afterward (February 9, 1674).

In November the Earl of Shaftesbury becomes lord chancellor.

1673. By the **Test Act** of March, officeholders under the government are ordered to take oaths of allegiance and supremacy, to abjure transubstantiation, and to take the sacrament according to the ritual of the Church of England. By this act the Duke of York, Shaftesbury, and Clifford are compelled to resign from their positions; their places are filled by Prince Rupert, Osborne, and the Earl of Nottingham. On November 21 the Duke of York espouses as his second wife the Princess Mary d'Este, of Modena.

1677. The Duke of York's daughter, **Mary, weds William of Orange,** thus paving the way for a future succession to the throne.

In this year a new treaty with Holland is made; this is counteracted by a second **secret** treaty with France.

1678. The alleged **popish plot** to assassinate the king and set up Catholicism, is declared in a perjured confession of Titus Oates, in September; he asserts that the plan has been devised by Don John of Austria and Père Lachaise, the confessor of Louis XIV.; Sir Edmonsbury Godfrey is put to death; Powys, Bellasis, Stafford, Petre, and Arundel are imprisoned by order of parliament; and Coleman, confessor of the Duchess of York, is executed; Roman Catholics are excluded from parliament by the Disabling Act, a measure destined to remain in force for 150 years. In December, Osborne, earl of Danby, is **impeached** for treasonable correspondence with France; early in the following year he is dismissed from his post as lord high treasurer, and sent a prisoner to the Tower; the Duke of York leaves England.

1679. **A new cabinet council** is chosen, consisting of Sir William Temple, Halifax, Essex, Sunderland, and Shaftesbury.

In May, the **Habeas Corpus Act** becomes a law; by its terms judges must, on petition, issue a writ ordering the jailer to "have forth the body" (*habeas corpus*) of the prisoner, and to show cause for the incarceration; prisoners must be indicted in the first term after their commitment, and put on trial not later than the second term; a prisoner once acquitted must not be tried a second time for the same offense.

Lauderdale causes a **persecution of the Covenanters** in Scotland; but Archbishop Sharpe, who tries to introduce episcopacy among the Scots, is assassinated, May 3. The Covenanters under Balfour defeat the forces of **Claverhouse,** June 1, at Drumclog; but they are overcome by the Duke of Monmouth at the battle of Bothwell, June 22.

Temple, Essex, and Halifax resign in October, to be succeeded by Godolphin and Hyde. Dangerfield reveals the **"meal-tub" plot,** so called from the fact that the papers were secreted in *a tub of meal.*

The opposition, now headed by Shaftesbury, calls for a sitting of the parliament, while the royalists denounce the petition to this effect as an attempt at improper interference with the king; the petitioners form a distinct political party, which afterward comes to be known as the **Whigs;** the party of the court is known as the **Tory** party.

1681. Plunkett, archbishop of Armagh, is put to death for high treason, July 1; and College suffers a like fate August 31. Shaftesbury is accused of treason in November, but escapes to Holland. In December the Earl of Argyle is condemned, but flees; the Scotch **Covenanters** and **Cameronians** are subjected to severe persecutions.

1683. In June the charter of the city of London is declared to be forfeited and then subjected to ransom in order to secure money for the king; the same method of gaining funds is used with other corporations. Essex, Monmouth, Gray, Russell, Sidney, Howard, and Hampden form a confederacy to secure a new method of procedure. This conspiracy and the Rye House plot to kill the king are discovered; **Essex** destroys himself; **Sidney and Russell are put to death,** but **Monmouth** is pardoned.

In September, Jeffries becomes chief justice (lord chancellor in 1685), and the Duke of York is restored to his offices.

1685. **Charles dies,** February 6; he is succeeded by **James II.,** who chooses Halifax, Sunderland, Godolphin, Clarendon, and Rochester for his council. The parliament sentences Oates and Dangerfield to be flogged, and Dangerfield dies from the effects of the scourge. Argyle goes to Scotland in June, but he is there apprehended and put to death, June 30. Meantime, **Monmouth** reaches Dorsetshire and announces himself as king; he is overwhelmed at the **battle of Sedgemoor,** July 6, and is **executed,** July 15. Sunderland takes the place of Halifax as president of the council and soon afterward professes himself a Catholic.

1686. The King openly appoints Sir Edward Hales to an official position, the fact of the appointee's Catholic religion being obviated by a royal dispensation. The King's course in this matter is supported by the courts, and the **Catholic worship is permitted;** the Protestant divines are prohibited from preaching against Catholic doctrines. A new court of ecclesiastical commission suspends Compton, bishop of London, for failure to enforce this decree. In the following year Farmer, a Roman Catholic, being made president of Magdalen college by the King, is declared to be unacceptable by the fellows, whereupon the objectors are expelled; in April, the King proclaims **liberty of conscience to all denominations** of England and Scotland; Father Petre, the king's confessor, is admitted to the privy council.

1688. The first declaration of liberty of conscience is followed by a second, which is ordered to be read in all the churches. June 10, a son is born to James, thus making probable the accession of a line of Catholic kings. **Sancroft,** archbishop of Canterbury, and **other prelates** are arrested for remonstrating against the "decree of liberty," but on their trial in June they are **acquitted.** The verdict causes widespread rejoicing, and a petition is forthwith sent to **Prince William of Orange-Nassau,** in which he is invited to deliver England from the apprehended tyranny of Catholicism. William sends answer September 30 accepting the invitation; he at once moves toward an **invasion of England.** His departure from Helvoetsluys, October 19, is interrupted by a gale; on November 1 his force of 14,000 men again sets sail and lands at Torbay, November 5; he is joined by Lord Churchill and the Duke of Grafton. On December 10 the Queen and Prince are sent to France by James, and the King himself flees on the following day. Sunderland and Father Petre also make their escape. Halifax presides over a temporary government of the peers in the capital; on December 17 James is conveyed back to London from Sheerness, but he is permitted to retire to Rochester. December 19, William of Orange enters London; James escapes to France three days later. A **Convention Parliament** is called for January 22.

1689. On January 28 the parliament declares that the king has abdicated, and that it is inconsistent with the country's welfare that it should be governed by a papist, wherefore the crown is offered to his daughter Mary, with the regency to William. This offer is not accepted; thereupon the sovereignty is offered, on February 13, to William and Mary jointly; with this proposal is presented the Declaration of Rights. This declaration provides that no papist shall wear the crown of England. **William and Mary accept the joint sovereignty** and are proclaimed king and queen, though the coronation does not occur until April 11. Danby becomes president of the council, and with him are Nottingham, Shrewsbury, Halifax, and Schomberg, one of William's imported train. On March 1 oaths of allegiance and supremacy are made by the officials, but some of the bishops and clergymen, refusing to swear, lose their offices. They come to be known as **non-jurors.** James reaches Ireland, March 14, and enters Dublin ten days later. He lays siege to **Londonderry** unsuccessfully in April. The civil war thus provoked is taken up in May by France on behalf of James; **Dundee** raises a force for James in Scotland. The Scots are victorious at the battle of **Killiecrankie,** July 17, but Dundee is slain; in Ireland the army of James is overcome at Newton Butler, July 30.

1690. The English fleet under Admiral Torrington is defeated at Beachy Head by the French, and Torrington is court-martialed and dismissed. William personally conducts the war in Ireland; he marches an army of 36,000 men against the forces of James, which he defeats at the **Battle of the Boyne,** July 12; James flees to France.

1691. William goes to Holland and there conducts a campaign in defense of his continental interests. The battle of Aughrim is fought in Ireland, July 12, resulting in another victory for William; Limerick surrenders, October 3, bringing the **war to an end.** James, escaping to France, makes no further efforts to recover his throne by force.

1692. The Highlanders having been offered pardon on condition of taking an oath of allegiance before 1692, the clan MacDonald is massacred, February 13, owing to the action of Dalrymple, secretary for Scotland, an enemy of the clan, who suppresses the fact that MacIan, the chief of the clan, has taken the oath, January 6.

1693. In January, the sum of £1,000,000 is borrowed on annuities at ten per cent. This is the **beginning of the National Debt** of Great Britain. On July 27 of the following year a charter is granted to the governor and company of the **Bank of England,** an association of merchants who loan £1,200,000 to the government.

1694. Queen Mary dies, December 28, and William of Orange is left sole sovereign of England, with the title of William III.
In this period bribery is discovered to be a prevalent form of corruption in the parliament; the speaker, Sir John Trevor, is expelled from the Commons.

1695. An attempt to found the **colony of Darien** on the isthmus of Panama ends disastrously.

1696. Just after the passing of the measure relative to trial for treason, by which it is provided that two witnesses are required to prove an overt act, a **plot to assassinate William** is discovered; the conspirators are put to death; at the same time the writ of *habeas corpus* is suspended.

1697. The **peace of Ryswick** ends the war between England and France, and Louis XIV. acknowledges the sovereignty of William III.

1698. **Peter the Great** of Russia visits England and resides at the public charge at the country seat of Sir John Evelyn.

1699. An act **against the Catholics** is passed by parliament, by which it is decreed that all the non-jurors shall forfeit their estates for life, and that Catholic priests and schoolmasters shall be subject to imprisonment for life.

1701. By the **act of Settlement,** June 12, the crown is settled on Anne, daughter of James II., and after her and her heirs on Sophia of Hanover-Brunswick, granddaughter of James I., and her issue, being Protestant. Other provisions of the enactment obviously condemn the policy of William. September 16, James II. dies, and as the Grand Alliance to which England is a party has just been formed against France, Louis XIV. proclaims James Edward as king of England.

1702. On March 8, **William dies,** and the second daughter of James II., **Anne,** wife of Prince George of Denmark, ascends the throne. War is declared against France by the Grand Alliance, May 4, Marlborough being captain general. Venloo and Liége are taken by the allies, but France gains possession of the lower Rhine.

1704. In the course of the war of the Spanish succession (see SPAIN) **Gibraltar is captured** by the forces of Sir George Rooke and Sir Cloudesley Shovel, July 24; the troops of Marlborough are again victorious in the great **battle of Blenheim,** August 13.

1705. Spaniards and English under Peterborough take Barcelona, October 4.

1706. The English win a brilliant victory over the French at **Ramillies,** May 23. After the battle of Turin, Italy is subdued by the Alliance, but at the battle of Almansa, on April 25 (1707), the allied forces are overcome by the Duke of Berwick, and Spain is lost.

1707. **England and Scotland are united,** May 1, under the name of **Great Britain,** this being necessary from the fact that Scotland did not share in the act of Settlement. It is provided that there shall be but one parliament, to which sixteen peers and forty-five members of the Commons shall come from Scotland; the **union jack** is adopted as the national flag.

1708. James Edward (the Pretender) makes a landing in Scotland, but Admiral Byng intercepts the French fleet sent to the aid of the Pretender, and the prince withdraws. July 11, the French are beaten at Oudenarde and, in the following year, September 11, at Malplaquet.

1711. The **South Sea company** is established, in which great numbers of persons become holders of shares; its failure in 1720 ruins thousands. The dishonesty of the managers is clearly shown in 1720 by a parliamentary investigation; many government officials are implicated; Aislabie, chancellor of the exchequer, and a number of members of the Commons are expelled from the House in 1721.
An unsuccessful attempt is made by the Marquis of Guiscard to assassinate Robert Harley, chancellor of the exchequer; the intended victim is created earl of Oxford and Mortimer and appointed lord high treasurer.
The **Duke of Marlborough** on his return to England, in November, is accused of peculation and is **dismissed from all his offices;** the Earl of Ormond becomes commander in chief of the English army.

1713. The **peace of Utrecht** is concluded, April 11; by its provisions the claims of the Pretender are renounced by France, and the Protestant succession in England is recognized. Hudson Bay and Strait, Nova Scotia, Newfoundland, and St. Christopher are ceded to England, while Spain gives up Gibraltar and Minorca. England secures **a monopoly of the slave trade** to Spanish America.

1714. **Queen Anne dies,** August 1. None of her children having survived her and the Catholic branch of the Stuarts being excluded by law, the crown passes to **George I.,** son of Sophia, granddaughter of James I., married to Ernest Augustus, elector of Hanover; on September 18, the King reaches England. His cabinet is composed of Townshend as secretary of state, Halifax first lord of the treasury, Sunderland lord lieutenant of Ireland, Cowper chancellor, Nottingham president of the council, and Marlborough commander in chief.

1715. The first parliament causes the impeachment of Bolingbroke, Ormond, and Oxford, of whom Oxford is imprisoned; the others succeed in making their escape. Jacobite riots occur, but they are easily put down. In September, the Earl of Mar leads an **uprising of the Scottish Jacobites** and at the close of the year the Pretender reaches Scotland. His forces scatter before the advance of Argyle, and he returns to France in February, 1716.

1716. The leaders of the insurrection are impeached; Derwentwater and Kenmure are beheaded, February 24.

1717. England, France, and Holland form an alliance, in January, to combat the schemes of Spain which involve support of the pretenders in France and England and an invasion from Sweden; in August, 1718, the emperor joins the allied powers.

1718. In December, **war between Spain and England** is declared.

1719. A Spanish expedition to Scotland in the interest of the Pretender fails.
November 20, by the treaty of Stockholm, Sweden grants Bremen and Verden to George I. for 1,000,000 rix dollars.

1721. On the death of Stanhope, **Walpole becomes prime minister;** his administration continues for more than twenty-one years.

1725. The treaty of Hanover, September 3, secures peace with France.

1727. **George I. dies,** June 11; his son, **George II.,** succeeds him.

1729. By treaty of Seville, Nov. 9, Spain cedes Gibraltar to Great Britain.

1731. The treaty of Vienna, signed March 16, provides that the Ostend East India company, formed for the purpose of entering into competition with the British East India company, shall be abolished.

1736. The **Porteous riots** occur in Edinburgh, in which Captain Porteous, who has incurred the hatred of the mob by firing upon it and has been condemned for murder, but has been reprieved, is taken from the jail and hanged, September 7.

1739. **War with Spain** over a boundary dispute over Georgia, in America. Admiral Vernon captures Porto Bello, on the isthmus of Darien.

1740. Admiral Vernon fails in an attack on Carthagena; the army suffers excessively from the ravages of disease. In September, Commodore Anson starts on a cruise, in the course of which he destroys a Spanish city in Peru, captures an East India galleon with a treasure of £300,000, and circumnavigates the globe, returning June, 1744.

1741. **Walpole falls;** he is succeeded by the Earl of Wilmington in February of the following year, who, in his turn, yields to Henry Pelham after a year's service (1743).

1745. England, having espoused the part of Austria in the war of the Austrian Succession, begun in 1740, is a participant in the important **battle of Fontenoy,** in which the French are victorious. The war extends to America; **Louisburg,** a French fortification in Nova Scotia, **is captured** by the English. In this year the second **Jacobite rising** occurs; the Young Pretender, Prince Charles Edward, lands in Scotland, July 25, and proclaims his father as James VIII. of Scotland and III. of England. The Pretender leads a force of 2,000 men into Edinburgh, September 11; and on September 21 the Jacobites win the battle of Prestonpans. The Prince reaches Derby, December 4, with an army of 6,000; he wins the battle of Penrith, December 18.

1746. January 17, the Jacobites are victorious at Falkirk Moor, but on April 16, the Duke of Cumberland meets and defeats the forces of Murray and the Pretender at the **battle of Culloden.** The leaders of the Jacobites are executed and the Pretender flees to France. Thus ends the struggle of the Stuarts to regain the throne of England.

1748. The **peace of Aix-la-Chapelle,** by which the claims of Maria Theresa to the throne of Austria are admitted, brings a brief cessation of the conflict between England and France.

1752. The **reformed Gregorian calendar** is adopted in Great Britain and the colonies; the year is appointed to begin on January 1, instead of on March 25 as before; eleven days are omitted from the year, so that September 3, Old Style, becomes September 14, New Style.

1753. The **British Museum** is founded.

1754. The Duke of Newcastle succeeds his brother, Pelham, as prime minister; and **Henry Fox** becomes secretary of state.

1755. Another **war with France** begins in **America,** having its cause in boundary disputes in that country. (See UNITED STATES.)

1757. The coalition ministry of the Duke of Newcastle and the elder Pitt begins. The French having threatened to invade England, Pitt sends an expedition which destroys Cherbourg.

1759. The **English capture Quebec,** September 13, the leader, General James Wolfe, falling in the storming of the city. On November 20 the French are defeated in the naval battle of Quiberon Bay by the English under Sir Edward Hawke.

1760. **George II. dies,** October 25; he is succeeded by **George III.**

1761. Pitt insists that war shall be declared against Spain, and the disregard of his advice leads to his resignation, October 5. The ministry of the Duke of Newcastle begins, with Egremont and Bute as secretaries of state, and George Grenville as leader of the Commons.

1762. War, declared against Spain in January, continues for a year.

1763. The **peace of Paris** is concluded, February 10, by England, France, and Spain. To England, France cedes Canada and Cape Breton Island; the Mississippi River is made the dividing line between the British colonies and Louisiana; France also relinquishes Granada in the West Indies and her African possessions on the Senegal River; England restores to France Goree, in Africa, and her conquests in India. From Spain England acquires Florida, and in compensation for this loss France is forced to deliver Louisiana to Spain; Spain receives from England the conquered portions of Cuba.
On April 1 George Grenville begins a ministry of four months, Halifax and Egremont being secretaries of state.
John Wilkes, for publishing articles in the *North Briton* insulting to the King, is arrested; he is expelled from the House of Commons and outlawed. General warrants against other persons are issued in the same connection, but these are declared by the chief justice to be illegal, and this decision is sustained by the Commons, April 22, 1766.

1765. The **Stamp Act,** laying a duty on legal documents in the American colonies, is passed in February, but it is **repealed** a year later (March, 1766). (See UNITED STATES.) In July the Marquis of Rockingham becomes prime minister, with General Conway as secretary of state. The Earl of Chatham succeeds to the premiership in August, 1767; he in turn yields to the Duke of Grafton, in December.

1768. In the second parliament of George III. John Wilkes becomes a member of the Commons for Middlesex.

1769. Wilkes is expelled from the House in February for a libel of Lord Weymouth; he is thereupon thrice reëlected and as many times rejected. In this year begins the publication in the *Daily Advertiser* of a series of powerful **letters** under the signature **"Junius";** they continue for three years, being a succession of attacks on the Duke of Grafton, Murray (afterward Lord Mansfield), other members of the government, and the King himself. The authorship, for a long time unknown, is, after a hundred years, assigned by many authorities to Sir Philip Francis.

1770. **Lord North** becomes prime minister in January.

1771. The Commons endeavor to prevent the publication of speeches, but the measure fails.

1774. The **Boston Port Bill** is passed. (See UNITED STATES.)
John Wilkes becomes lord mayor of London and member for Middlesex. A motion is made to expunge the resolution rejecting him, and this is ultimately done, May 3, 1782.

1775. **The war for the independence of the American colonies begins with the battles of Lexington and Bunker Hill.** (See UNITED STATES.)

1777. A British army about ten thousand strong, under General John Burgoyne, invades New York from Canada; Ticonderoga is captured July 6; the British are routed at Stillwater, September 19, and at Freeman's Farm, October 7. On October 17 Burgoyne, after his defeat at Saratoga, is obliged to surrender his army to General Gates.

1778. **France** makes an alliance with the **American colonies** and becomes engaged in a war with Great Britain.
The penal laws against Roman Catholics are repealed.

1779. **Spain** declares war against **Great Britain,** and Gibraltar is besieged, but is successfully defended by the garrison under Elliott.
Captain James Cook, the navigator and explorer, **is killed** by the natives of Hawaii, February 14.

1780. The plan to afford relief to the Catholics in Scotland causes the **"no-popery" riots** of the Protestant Association, organized by Lord George Gordon; 40,000 persons assemble Friday, June 2, to present a petition to parliament; afterward they attack and pillage and burn for six days. More

than two hundred of the mob are shot by the military in quelling the disturbance, and many of the leaders are put to death. Lord George Gordon is acquitted on a trial for high treason, February 5, 1781; he dies in prison while under a charge of libel.

An armed neutrality is formed by other powers to resist Great Britain's assumption of the right of search.

Holland declares war, December 30.

1781. **Lord Cornwallis,** commander in chief in America, **surrenders to Washington** at Yorktown, October 19. (See UNITED STATES.)

1782. The Marquis of Rockingham becomes premier, March 20, with Lord Shelburne and Charles James Fox as secretaries of state, Lord Thurlow as lord chancellor, **Edmund Burke** as paymaster of the forces, and Sheridan as undersecretary of state. In July, Lord Shelburne succeeds Rockingham, and **William Pitt** at the age of twenty-three becomes chancellor of the exchequer.

1783. The **peace of Versailles and Paris** is signed, September 3; the independence of the thirteen United States is recognized, together with their possession of the territory east of the Mississippi; England yields Tobago in the West Indies to France, also the country of the Senegal in Africa; Spain regains Minorca and Florida.

The coalition ministry of the Duke of Portland goes into office, April 2, with Cavendish chancellor of the exchequer, Lord North and Fox secretaries of state, and Burke paymaster. In December, the ministry is dismissed and **William Pitt becomes prime minister.**

1787. **Convicts** are first sent to **Botany Bay,** Australia. (See AUSTRALASIA.)

1788. The **king** is afflicted with **madness,** October 12; the appointment of a regent is discussed, but the sovereign recovers his mind in February, 1789.

1791. Canada is permitted to establish representative institutions.

1792. By the provisions of the **Libel bill,** proposed by Fox, it is decreed in June that the jury shall render a verdict of guilty or not guilty as to *the whole matter at issue.*

1793. **War** is declared against Great Britain by the **French republic;** the revolutionary spirit rises in England in the following year to such an extent that the *habeas corpus* is suspended.

1795. Holland acts as an ally of France in opposition to Great Britain, whereupon the **English fleet** takes possession of **Ceylon,** the **Cape of Good Hope,** and other territories belonging to the Dutch.

1796. Spain declares war against Great Britain; the whole country passes into a **period of distress.**

1797. The **Bank of England suspends specie payments,** February 27. April 15, there is a mutiny in the fleet at Spithead and the demands of the sailors are allowed. This is followed, May 22, by a revolt of the marines at the Nore, but, owing to the nature of the demands, the exactions are refused and the rising is suppressed by force; the leaders are executed. October 11, **Admiral Duncan defeats the Dutch fleet** under De Winter and destroys fifteen ships near Camperdown; this brilliant victory restores the public confidence and relieves the people from the fears of an invasion.

1798. The ebullitions of the revolutionary spirit continue, however, and the *habeas corpus* is again suspended, April 20. **A rebellion** breaks out **in Ireland,** in May, carried on by the United Irishmen, a revolutionary organization founded in 1791; aid is rendered to the organization by a number of French expeditions. The rebels are at first successful, but are defeated at the battle of Vinegar Hill, June 21; the revolutionists and their allies are totally overcome at Ballinamuck, September 8, when the insurrection ends. **Admiral Horatio Nelson** defeats the French at the **battle of the Nile,** Aug. 1.

1799. An expedition sent against the Netherlands meets with complete failure. In the following year the **armed neutrality** is revived.

1800. Act for the **Union of Great Britain and Ireland** is passed in July. In November, a proclamation declares that the members of the existing parliament shall be members of the first parliament of the United Kingdom

1801. To this body Ireland is empowered to send four spiritual lords, together with twenty-eight temporal peers and one hundred members of the Commons. The churches of the two countries are also united. **Pitt resigns** from the ministry, owing to the fact that the King will not make concessions in favor of Irish Catholics.

The Addington ministry comes into power on March 17.

General **Sir Ralph Abercromby** wins an important victory at **Alexandria,** March 21, and **Nelson bombards Copenhagen,** April 2. In June, England forms an alliance with Russia; and the armed neutrality is ended.

1802. Great Britain and France conclude the **treaty of Amiens.**

1803. Napoleon's treatment of the English ambassador, in March, and the failure of Great Britain to restore Malta to the Knights of St. John, provoke **another war,** which breaks out in May.

A new revolution in Ireland is fomented by Robert Emmet; the insurrection is suppressed, and Emmet is executed, September 20.

1804. **Pitt** organizes his **second ministry,** on May 10.

1805. The third coalition is formed against France, in which England, Austria, Russia, Sweden, and Prussia unite to check the power of Napoleon. **Nelson** destroys the combined fleets of France and Spain at **Trafalgar,** but is himself **killed** in the battle, October 21.

1806. Lord Grenville assumes the conduct of government, February 10; Charles James Fox is foreign secretary, and Erskine, chancellor.

1807. By Orders in Council it is proclaimed that the coasts of France and of all her territories are in a state of blockade.

On March 23 of this year the **slave trade is abolished.**

A new ministry is formed, March 31, with the Duke of Portland as first lord of the treasury and George Canning as home secretary.

Cathcart bombards Copenhagen for four days, beginning September 2.

Napoleon issues, on December 17, the **Milan decree,** supplementary to the **Berlin decree** of November 21, 1806, by which it is declared that the British Isles are in a state of siege and that all commercial relations with them by other nations are forbidden.

1808. The **Peninsular war,** undertaken against Napoleon (who has made his brother Joseph king of Spain) in order to preserve the balance of power in Europe, begins; in May of the following year **Sir Arthur Wellesley,** afterward duke of Wellington, enters Spain.

1809. Perceval becomes first lord of the treasury.

1810. The king becomes wholly demented in November; on February 5 of the next year, **George Prince of Wales** becomes **regent.**

1812. Perceval is assassinated by Bellingham, on May 11.

The ministry of Lord Liverpool, Castlereagh being the foreign secretary, comes into office, June 8. Ten days afterwards **war with the United States** is declared. (See UNITED STATES.)

1813. Wellington defeats Joseph Bonaparte and the French at Vittoria, June 21.

1814. The **peace of Paris** is concluded, May 30. (See FRANCE.)

1814. The **treaty of Ghent** is concluded between Great Britain and the United States, December 24.

1815. By the **treaty of Vienna,** March 25, Mauritius, St. Lucia, Malta, Tobago, Demerara, Essequibo, and the Cape of Good Hope are ceded to Great Britain. Hanover is declared to be an independent kingdom, with George III. as its first king, the succession to pass to his male heirs. Wellington finally crushes Napoleon and destroys the French Empire at the **battle of Waterloo,** June 18. (See FRANCE.)

1816. Riots break out in the agricultural districts of England. **William Cobbett** incites the people to demand parliamentary reforms; the violence of his followers leads to a suspension of the *habeas corpus.*

1819. A great mass meeting of the Radicals at St. Peter's Fields in Manchester, August 16, is not dispersed until the troops have charged the rioters and blood has been shed.

1820. **King George III. dies,** January 29, and the Prince Regent succeeds to the throne with the title of **George IV.**

Thistlewood and four others, who have been found guilty of participating in a plot to kill the ministers, are put to death, May 1.

Queen Caroline is put on trial for divorce, in August, but is acquitted after a hearing covering four months. Forbidden to share in the coronation, she dies on August 21 of the following year.

1821. The Emperor Napoleon dies at St. Helena, May 5.

The **Bank of England** resumes **specie payments.**

1822. Castlereagh kills himself; **George Canning** takes the foreign secretaryship and Peel becomes home secretary.

1825. A commercial panic afflicts Great Britain, and the powers of the Bank of England are limited by legislative enactment.

1827. Lord Goderich becomes prime minister, August 8.

England, France, and Russia, having united in aid of Greece against Turkey, the **Turkish fleet** is destroyed at **Navarino,** October 20.

1828. The **Duke of Wellington** becomes **prime minister,** with Robert Peel as home secretary. The requirement that the officials of the government must take the sacrament according to the forms of the Established Church is done away, in May, and is replaced by a declaration made "on the true faith of a Christian." By this change **dissenters are permitted to receive appointments.**

1829. The oaths of allegiance and abjuration and supremacy are modified, April 13, so that **Roman Catholics** are not debarred from holding **offices** save those of regent and of viceroy in Ireland.

1830. **George IV. dies** on June 26; his brother, **William IV.,** becomes king. The **Manchester and Liverpool railway,** first thoroughfare of the kind in the world, is opened, September 15.

The ministry of Earl Grey begins, November 24, with Lord Althorp as chancellor of the exchequer, Lord Brougham as lord chancellor, and Lord Melbourne as home secretary.

1831. The House of Lords rejects the **Reform Bill** introduced by Lord Russell into the Commons and passed by that body, September 22. This action of the higher body is regarded with detestation by the masses, and riots occur in many parts of the country.

1832. The Commons passes the Reform Bill for the third time, March 19; the Lords recede and the measure becomes a law, June 7. By the changes introduced in this measure one hundred boroughs lose a member each, in some cases *both* of their members, while the larger towns and counties gain proportionately. The privilege of the suffrage is also much extended.

1833. **Slavery** in the West India colonies **is abolished,** to take effect August 1, 1834; a compensation of £20,000,000 is appropriated for the slave owners.

1834. **Lord Melbourne** is put at the head of the government, July 16. The Poor Law Amendment act goes into force, in August, providing that the local boards shall be abolished and replaced by central authority and that unions shall take the place of workhouses.

The ministry is dismissed in November and the king summons **Sir Robert Peel** from Rome to the **premiership,** the Duke of Wellington serving in the interval, and afterwards as foreign secretary.

1835. Melbourne becomes prime minister for the second time, April 18, with Palmerston as foreign secretary, John Russell as home secretary, and Howick as minister of war.

1837. **William IV. dies,** June 20, and is succeeded by (**Alexandrina**) **Victoria,** only daughter of the late Duke of Kent. The Duke of Cumberland, the eldest surviving son of George III., becomes king of Hanover, which thus reverts to independence.

A rebellion occurs in Canada; the American steamer *Caroline* is burned; order is restored after two years, and in 1840 the two Canadian provinces are united; a responsible local government is granted (1847).

1838. A national petition or **People's Charter** is formulated by workingmen who assemble near Birmingham, in August, in which they call for annual parliaments, universal suffrage for men, the ballot, the abolition of property qualification for membership in parliament, and the payment of a salary to members. The demands of these petitioners, or **Chartists,** are refused by the parliament on June 14 of the following year, and the discontented become riotous.

An **Anti-Corn-Law League** is formed at Manchester by John Bright and Richard Cobden, in September.

1839. The Chinese forbid the **importation of opium** into China, and a war follows, ending with the treaty of Nanking, August 29, 1842.

1840. The **penny rate of postage** is introduced in January.

Queen Victoria weds her cousin **Prince Albert** of Saxe-Coburg and Gotha, February 10.

1841. The second administration of Sir Robert Peel begins, September 6, the Duke of Wellington in the cabinet as minister without office.

1842. The **customs duties** on seven hundred articles are **reduced or abolished,** and an income tax is levied, June 22, in order to make up the deficiency in the revenues.

1843. **William E. Gladstone,** a member of parliament since 1832, succeeds the Earl of Ripon in the Peel ministry.

1844. An issue department of the Bank of England is established, and it is ordered that weekly returns shall be published; the circulation of the bank is limited to £14,000,000.

1846. The whole body of the **corn laws is repealed** and the sliding scale of duties on imports is abolished. The duty on imported wheat at or above fifty-three shillings per quarter is ordered to be four shillings per quarter until February 1, 1849, then to be reduced to one shilling per quarter, on all sorts of grain imported. In 1869, the clause levying one shilling is repealed.

A dispute with the **United States** as to the **Oregon boundary** is settled by treaty in June. Lord John Russell forms a ministry, July 6; he appoints Lord Palmerston secretary and Thomas B. Macaulay paymaster-general.

The potato crop in Ireland fails and a **famine** follows.

1847. A commercial panic disturbs the peace of London.

1848. A **rebellion** takes place in **Ireland,** but it is suppressed; its leaders, Smith O'Brien and Mitchell are convicted and transported.
The Chartists assemble in great numbers on Kennington Common, April 10, and prepare a petition to parliament.

1849. The Navigation laws are repealed in June.

1850. A papal bull reëstablishes a **Roman Catholic hierarchy in England,** September 30. In July of the following year the Ecclesiastical Titles bill imposes a fine of one hundred pounds on any person attempting to give effect to the mandate of the pope.

1851. An electric telegraph is established between France and England. The **first international exhibition** of arts and industries takes place in the Crystal Palace, in Hyde Park, London.

1852. The **Earl of Derby** organizes his first ministry with **Benjamin Disraeli** as chancellor of the exchequer, February 27. This is superseded, December 28, by the administration of the Earl of Aberdeen, with W. E. Gladstone as chancellor of the exchequer, Palmerston as home secretary, and Lord John Russell as foreign secretary.
A war with the Kaffirs in South Africa, waged for about two years, results in an extension of the English possessions in that country. A second war in Burma is also carried on in which Great Britain gains Pegu.

1853. England and France protest against the encroachments of Russia on the Ottoman empire. Early in 1854 they declare war on Russia, the **Crimean war.** See RUSSIA.

1854. A **treaty of reciprocity** with the **United States** is concluded, June 5, which continues in force for twelve years.

1855. Lord Aberdeen resigns, January 30, on account of the military mismanagement in the conduct of the Crimean war. **Lord Palmerston** becomes prime minister, February 5, with Gladstone as chancellor of the exchequer; Gladstone resigns, February 22.
A serious bread riot occurs in Liverpool, February 19.

1856. The **Crimean war ends** with the treaty of Paris.
A war with China resulting from the seizure by the Chinese of the *Arrow,* a British smuggling vessel, begins, March 30. Canton is bombarded, and by the treaty of Peking, August 24, 1860, the country is opened to the merchants and missionaries of Europe.

1857. A commercial panic occurs in London, in November.

1858. The **second administration of Earl Derby** comes into power, February 22, with Disraeli as chancellor of the exchequer. In June the property qualification for eligibility to the parliament is abrogated; in July an act is passed by which Jews are made eligible to membership in that body.
The **first Atlantic cable** is successfully laid, August 5; it ceases to operate, September 4.
A commercial and reciprocal treaty with Japan is signed, August 26.
The **East India Company is abolished** at the conclusion of the Indian mutiny (see INDIA), and its rights are transferred to the crown; Queen Victoria is proclaimed sovereign of India.

1859. The **second Palmerston ministry** begins with Gladstone as chancellor of the exchequer, Lord Russell foreign secretary, and Lord Campbell as lord chancellor, June 13.

1860. Great Britain and France make a commercial treaty, January 23.
The Prince of Wales visits the United States and Canada.

1861. England forms an alliance with France and Spain for the enforcement of their respective claims against Mexico; diplomatic relations with Mexico are broken off in July.
Mason and Slidell, the American Confederate commissioners to England and France, are taken from the British mail steamer *Trent* by officers of the *San Jacinto,* a vessel of the United States, November 8.
Albert, the Prince Consort, **dies,** December 14.

1862. Second international industrial exhibition opens in London, May 1.

1863. The **Maori war** in New Zealand begins; continues for six years.

1864. Great Britain cedes the Ionian Islands to Greece, in June.

1865. An **insurrection** breaks out in **Jamaica,** in October, but is soon suppressed; Earl Russell becomes prime minister for second time, November 6.

1866. The **Fenian agitations** in Ireland lead to a suspension of the *habeas corpus* in that country, in February.
A panic is caused in London, in May, by the failure of Overend, Gurney and Company, with liabilities of 19,000,000 pounds.
Communication with America by means of an **Atlantic telegraph cable is fully established** in July. On July 6, the third Derby administration begins, with Disraeli as chancellor of the exchequer.

1867. A rising of the Fenians in Ireland is quickly suppressed.
The second Reform Act becomes a law, August 15; by its provisions the electoral franchise is greatly extended. By the British North America Act, Canada, Nova Scotia, and New Brunswick are joined in a federal union named the Dominion of Canada; each of the four provinces (Ontario, Quebec, Nova Scotia, and New Brunswick) is allowed its own government in matters of local concern.
An **expedition** is sent into **Abyssinia** to punish King Theodore for his treatment of the British officials; Magdala is captured and the king destroys himself. The English retire from the country.

1868. Lord Derby resigns February 27; Disraeli succeeds him; he resigns, and **W. E. Gladstone becomes premier,** December 9.

1869. On July 26 the act for the **disestablishment of the Irish church** is passed; some of the properties accruing are bestowed on the Catholic college of Maynooth; another part is devoted to general education.
In July **imprisonment for debt is abolished.**

1870. The **Irish Land Act** becomes a law, by which it is provided that compensation shall be made to outgoing tenants, and funds shall be available for loans to landlords making improvements or to tenants desirous of purchasing their holdings.
A general system of **national education** is established by law.

1871. The right to **purchase commissions** in the army is **abolished.**
According to the **treaty of Washington** with the United States, **the Alabama claims** are to be adjusted by a court of arbitration at Geneva (1872); the dispute as to the northwestern boundary is to be determined by the Emperor of Germany.

1872. **Voting by ballot** is adopted as the method in English elections.

1873. The **Ashanti war** breaks out, but ends a year later with the taking of Kumassi by the English under Sir Garnet Wolseley, February 4.

1874. **Gladstone resigns** and **Disraeli becomes prime minister** on February 21, with Sir Stafford Northcote as chancellor of the exchequer. The **Fiji Islands are annexed** by Great Britain.

1875. In November, Great Britain purchases the shares in the Suez Canal belonging to the khedive, thus gaining the foothold in Egypt which has become so stable; the Prince of Wales visits India.

1875. Captain Nares leads a polar expedition, which, in the following year, reaches latitude 83° 20′ north.

1876. **Queen Victoria** is proclaimed **Empress of India,** April 28.

1877. The British take possession of the **Transvaal Republic.**

1878. England makes a convention with Turkey, by the terms of which the former agrees to uphold the Ottoman empire in Asia and is reciprocally permitted to occupy Cyprus, June 4.
The second Afghan war begins.

1879. Anti-rent agitations disturb Ireland; the **Irish Land league** is formally organized, supported by **Charles Stewart Parnell,** Thomas P. Dillon, etc.
The British attack Cetywayo, king of the Zulus, in January. **Sir Garnet Wolseley** begins the conduct of the war in May. The Prince Imperial, Louis Napoleon Bonaparte, is killed in a skirmish in Zululand, June 1. The Zulus are overcome by the British under Lord Chelmsford at Ulundi, July 4, and the king is taken prisoner, August 28.

1880. In April the ministry of Disraeli (who has been made earl of Beaconsfield, in 1876) resigns and **Gladstone becomes prime minister,** with the Marquis of Hartington as secretary for India.
The Transvaal rises against the rule of Great Britain, in November.

1881. The **Boers** of the Transvaal defeat the British under Sir George Colley, February 27; England consents to **autonomy of the Republic,** March 21.
The **Irish Land act** becomes a law, August 22; it provides a commission to adjust the differences between landlords and tenants, and grants a modified form of free sale, fixed tenure, and reasonable rent rates. **Parnell** and other leaders of the Land league of Ireland are **imprisoned** in October, and in the same month the league issues a proclamation against the payment of rents.

1882. Parnell and his companions are **set at liberty** in May. On May 6 Lord Cavendish and Thomas Henry Burke, the undersecretary, are assassinated in Phœnix Park, Dublin. Parliament passes the Arrears for Rent bill in August, and the Irish National league is formed in October.
Alexandria is bombarded, July 11 and 12; the Europeans in the city are massacred by Arabi, the leader of the Egyptian rebels. Sir Garnet Wolseley makes a campaign against **Arabi** and completely defeats him at **Tel-el-Kebir,** September 13. On the following day Arabi is captured; he is banished, December 3.

1883. The **Egyptian army** of Hicks Pasha near El-Obeid is **destroyed by the Mahdi** in November, and the hill tribes about Suakin rise.

1884. In January, General **Charles George Gordon** ("Chinese" Gordon) is sent to the Sudan; Osman Digma conquers the army of Baker Pasha near Tokar, February 29, and again at Tamanieb, March 13; Gordon is surrounded in Khartum. An Egyptian conference is held in London (June 28–August 2) and General Wolseley is sent with an expedition to relieve Gordon.
The parliament passes a new franchise bill in December.

1885. Irish revolutionists make an attempt to wreck the houses of parliament and the Tower of London.
Wolseley's advance reaches Khartum, January 26, but on the same day the Mahdi captures the place and **Gordon is killed.** The British troops are withdrawn from the Sudan. The death of the Mahdi occurs soon afterward.
A Russian detachment occupies the Zulfikar Pass leading to Herat, and an advance against Herat is feared by the British. A settlement is effected, by which the English make concessions to Russia in respect to the boundary lines between Afghanistan and Turkestan.
A Canadian insurrection is led by Louis Riel, but is quickly suppressed; its projector is taken prisoner in May and put to death November 16.
The Gladstone ministry resigns in June and is succeeded by a cabinet formed by the **Marquis of Salisbury.**
War is declared against Burma in November; General Prendergast marches his army into Mandalay; King Thebaw surrenders. **Burma is annexed** to Great Britain, January 1 of the following year.

1886. The ministry of Salisbury resigns and **Gladstone** forms a **new administration** in February. In the next month he introduces a **bill for Home Rule** in Ireland and offers a plan for the purchase of lands there. The **Liberal Unionist** party is now formed by dissenters from Gladstone's Irish policy. The ministry resigns in July, and Salisbury returns to the premiership.

1887. **Henry M. Stanley** sets out in charge of an expedition for the relief of Emin Bey, governor of the Equatorial provinces of Egypt. Starting from the Kongo, he makes his way through the basin of the Aruwimi, and from this river reaches the Albert Nyanza. He finds Emin Pasha in 1888, and they march to the Zanzibar coast.
In this year the construction of the **Manchester Ship Canal** is begun.

1888. Fortifications of Osman Digma are carried by Gen. Grenfell, Dec. 20.

1889. Great Britain and Portugal are involved in disputes concerning their possessions in Africa; in the following year Portugal yields.

1890. Great Britain and Germany make a treaty by which they determine the boundaries of their respective spheres of control in Africa. Helgoland is ceded to Germany, and England extends a protectorate over Zanzibar.
Great labor strikes, beginning with the workingmen of the London docks, occur throughout England.
Sir Edward Guinness gives a quarter of a million pounds for the erection of dwellings for the poor in London.
General Booth of the **Salvation Army** publishes his plea and plan for the redemption of "Darkest England."
In September, John Dillon and William O'Brien, the Irish agitators, are arrested on a charge of conspiracy.
Cardinal John Henry Newman dies, August 11.
The great banking house of Baring Brothers is driven to suspension.

1892. Prince Albert Victor, eldest son of the Prince of Wales and heir apparent to the crown, dies, January 14.
Alfred, Lord Tennyson, dies, October 6, at Aldworth.
Labor strikes continue prevalent, and in November 345,000 cotton spinners of Lancashire leave the shops.

1893. Gladstone introduces a **bill for Home Rule** in Ireland into the House of Commons, on February 13. It passes the Commons, September 1, by a majority of twenty-five; on September 8 it is **rejected** by the Lords by a majority of 378.
The flagship *Victoria* is sunk by the *Camperdown* near the harbor of Tripoli; 358 officers and men perish in the disaster.

1894. **William E. Gladstone,** because of old age, resigns as Premier of Great Britain, on March 3; he is succeeded by **Lord Rosebery.**

1895. On June 25, the Rosebery ministry is overthrown, and the **Marquis of Salisbury** is again made **prime minister,** in October. The Irish Nationalists renew their allegiance to the Liberal party.

1896. Alfred Austin is appointed poet laureate on January 1.
Great Britain yields to Brazil the ownership of the Island of Trinidad.
In South Africa, a raid into the Transvaal Republic, thought to have been

instigated by Sir Cecil Rhodes, British Premier of Cape Colony, arouses the anger of Germany; the two countries are menaced with war. In this year, the British Catholics and the leaders of the Anglican Church unite against the Nonconformists on the question of the secularization of the educational system of the United Kingdom.

1897. The people of Great Britain celebrate with enthusiasm the "Diamond Jubilee," or Sixtieth Anniversary of the coronation of Victoria.

1898. **William E. Gladstone** dies at Hawarden, May 19. Parliament orders a national funeral, with burial in Westminster Abbey.
Penny postage is established throughout most of the empire.

1900. **John Ruskin** dies at Brantwood, January 20.
General elections of October return the Conservatives to power with large majorities, thus indorsing the policy of the Boer war.

1901. Lord Roberts, on his return from South Africa, is received with high honors, and is created an earl, in London, January 2.
Queen Victoria dies, January 22, at the age of 81, after a reign of 63 years, the longest in English history. On January 23 **Albert Edward,** Prince of Wales, takes the oath, and on January 24, in London, is formally **proclaimed king, as Edward VII.,** by the Grace of God, King of the United Kingdom of Great Britain and Ireland, Defender of the Faith, Emperor of India.
Parliament is opened, February 14, by King Edward VII. with much ceremony. The Irish members of the Commons make a serious disturbance, March 5, over a question of closure, and are carried out by force. To provide for the war deficit and expenses, parliament in April and May increases the income tax, levies a tax on sugar, and authorizes an addition of $300,000,000 to the national debt. The deficit last year was $285,000,000.
Trades-Unions Congress meets, in August, at Swansea, Wales, to devise means to combat the decision of the House of Lords that trades-unions can be held responsible for breaches of law by their members and so subject to suit. A suit has been brought for damages from "picketing" during a strike.
September 18–21, the **Millenary of King Alfred the Great** is celebrated and a statue unveiled at Winchester.

1902. January 30, a **treaty with Japan** is signed.
Each Power agrees that if, in preserving the integrity of China and Korea, either is attacked by one other nation the other will remain neutral; if either is attacked by more than one other nation the other Power will afford active help. The treaty is to remain in force for five years. This treaty (which was announced February 12) is considered as an offset to the Franco-Russian alliance.
February 11, King Edward VII. holds his first levee. April 4, **Cecil Rhodes's will** is published.
It provides $10,000,000 for establishing scholarships of $1500 a year for German and American students at Oxford University.
June 1, Lord **Kitchener is made a viscount** and promoted to the rank of general. June 24, the coronation set for June 26 is postponed because of the King's illness. It finally takes place on August 9. July 11, Lord Salisbury resigns as premier, and is succeeded, July 12, by A. J. Balfour.
June 30–August 11, council of colonial premiers. They recommend the use of the metric system of weights and measures throughout the empire. The questions of imperial defense and trade are discussed.
December 3, the **Education Bill is passed** by parliament. It gives to many denominational schools support from taxation, but increases the power of the Anglican clergy, and is therefore strongly opposed by Nonconformists.

1903. Questions of government finance are preëminent during the year. In order to further imperial consolidation, Joseph Chamberlain, the colonial secretary, advocates a preferential tariff. Mr. Balfour, the premier, favors having the power to levy retaliatory duties in dealing with foreign countries. Mr. **Chamberlain** resigns his office, September 18, so as to be free to **advocate tariff measures.** Five free-trade members of the Cabinet resign from lack of sympathy with the premier's views.
The Irish Land Bill, providing facilities for the sale of estates to tenants, in lieu of rents, is passed, August 13.
On August 25 the commission on the conduct of the South African war presents a report strongly condemning the military system.
February 23, the **Taffvale Railway Company** is awarded $115,000 damages against a labor union, because of picketing, intimidation, etc., during a strike.
In April and May King **Edward VII. visits Portugal, Italy, and France.**
In July the King and Queen visit Ireland and are warmly welcomed.
August 4, a government subsidy of $340,000 annually for 20 years is granted to the Cunard Steamship Co. to enable it to construct new steamers of not less than 24½ knots speed. The Cunard vessels are to be subject to purchase or hire by the government.

1904. Parliament opens, February 2. The government is defeated, February 11, in the House of Commons by 11 votes. Mr. Balfour refuses to resign, and on the next ballot has a majority of 25.
March 29, Mr. Balfour announces policy of real progressive free trade.
April 8, **treaty is signed with France** settling questions regarding Egypt, Morocco, Newfoundland, West Africa, Madagascar, and the New Hebrides.
In July great excitement is caused by the seizure, by Russian war vessels, of British merchantmen, and in October the most intense feeling is caused by the **North Sea incident.** (See JAPAN.)
In December it is announced that the fleets are to be redistributed so as to be more accessible to possible danger points.
Mr. Chamberlain continues his campaign for a preferential tariff.
Passive resistance to the Education Act of 1902 continues.

1905. Parliament opens February 14. February 25, the **North Sea Commission finds** that there were no hostile vessels near the Dogger banks when the British trawlers were fired upon, but that Russian fear of attack was justified. Russia pays damages to families of killed and wounded.
July 20, the Balfour ministry is defeated by a majority of 3 on Irish Land Commission Bill, but Premier Balfour refuses to resign.
August 12, the new **Anglo-Japanese treaty** is signed. This has for its main purposes the maintenance of peace in the regions of eastern Asia and India, and of the independence and integrity of China. An important provision is that if either country become involved in war in India or the East, the other will come to its aid.
On December 4 the ministry resigns and on December 10 the new cabinet formed by Sir Henry Campbell-Bannerman is made public.

1906. January 8, parliament is dissolved. Elections result in **great Liberal Victory.** Liberals, 387; Conservatives and Unionists, 158; Irish party, 84; Labor party, 41. Campbell-Bannerman is prime minister.
Dreadnought, the most powerful battleship built, is launched, Feb. 10.
May 20, woman suffragists (popularly dubbed **"suffragettes")** surround residence of Campbell-Bannerman to demand action of House of Commons on their claims. During the year they continue agitation in London and other cities. Many women are arrested, generally preferring imprisonment to paying fines.
"Suffragettes" mob Herbert Asquith, chancellor of the exchequer, at a public meeting, June 15.
July 30, the **Education Bill,** designed to separate state-aided schools and the Established Church, passes its third reading in the House of Commons. In the House of Lords it is so amended as to defeat the intention of the House of Commons. The government, however, while rejecting the amendments, decides not to dissolve parliament.
Cambridge University beats Harvard University in eight-oared shell race from Putney to Mortlake by two lengths, September 8.
London elections go heavily against advocates of municipal ownership of public utilities, November 2.
During the year parliament devotes much attention to affairs in the Transvaal Colony. The Chinese coolie laborers who wish to return to China are ordered deported, and the importation of others is forbidden. Universal white male suffrage is determined upon as the basis of the new legislature.

1907. February 12, King Edward VII. opens parliament.
February 13, "suffragettes" riot and attempt to force an entrance to the House of Commons, and sixty are arrested.
March 14, Lord Curzon is elected chancellor of the University of Oxford.
May 21, a convention of the Nationalist (Irish) party in Dublin refuses to support the Liberal party's bill for an Irish council.
June 5, the "Derby" is won by Richard Croker's "Orby."
August 3, Great Britain announces the formation of an **alliance with Russia** to guard the Indian frontier as at present delimited.
August 26, the bill allowing **marriage with a deceased wife's sister** passes the House of Lords and becomes a law.
September 7, the Cunard turbine steamship *Lusitania* sails from Liverpool on her maiden trip to New York.
November 11, Emperor William of Germany visits the King at Windsor.

1908. January 28, **prohibition** leaders hold a **World Conference** in London to organize a World Federation.
January 29, the King in person opens parliament.
The British government orders the evacuation of Tibet by the British troops, the indemnity demanded having been paid by Tibet.
February 11, many suffragettes, attempting to storm the House of Commons, are arrested by the police.
February 26, the House of Commons adopts a resolution urging speedy transfer of the Kongo Free State from King Leopold to Belgium.
February 28, the **Woman's Enfranchisement Bill** is given its first reading in the House of Commons.
March 30, the House of Commons passes resolutions favoring a degree of "home rule" for Ireland.
April 5, Premier Sir Henry Campbell-Bannerman resigns.
April 8, **H. H. Asquith** is appointed premier.
April 25, British cruiser *Gladiator* is sunk and 28 sailors lost, in collision with American liner *St. Paul,* off the Isle of Wight.
May 25, President Fallières of France visits London.
June 13, ten thousand suffragettes make remarkable demonstration in London, and on June 21 another tremendous demonstration in Hyde Park.
June 16, the **Pan-Anglican Congress** convenes in London.
June 30, International Council of Congregational Churches at Edinburgh.
July 23, the government appoints a commission to investigate the operation of the meat trusts of Great Britain and the United States.
July 31, the **Old Age Pension Act** is passed.
August 1, parliament adjourns.
September 13, there is a notable procession in London, without regalia, of Roman Catholic prelates attending the Eucharistic Congress.
October 28, demonstration by the suffragettes in the House of Commons.
November 23, Lord Roberts, addressing the House of Lords, declares that an army of 1,000,000 men is needed to guard against invasion.
December 4, International Conference to revise the rules of naval warfare is opened in London.

1909. February 16, King Edward VII. opens parliament. In the debates on naval defense both great parties agree on maintaining the so-called "two-power standard" and on laying down battleships of the *Dreadnought* class in accordance therewith. On February 18 and 24 there is rioting by "suffragettes" in Parliament Square, with many arrests.
February 25, the International Naval Conference at London agrees on a new code governing naval warfare, the representatives of the United States withholding for the time full assent.
March 23, a report is received from Lieut. Shackleton, R. N., that his antarctic exploring party on January 9 reached a point within 111 miles of the South Pole (88° 23′ S.), — the "Farthest South."
June 28, violent demonstration by suffragettes; 124 arrests.
August 30, Cunard steamship line inaugurates a policy of landing passengers at Fishguard, Wales, saving several hours to London. November 4, the House of Commons passes the budget by vote of 379 to 149. On November 30, after a notable debate, the House of Lords rejects it, 350 to 75. On December 2, the Commons indorse the budget, and on December 3 parliament is prorogued amid national excitement.

BRITISH COLONIES, POSSESSIONS AND DEPENDENCIES.

THESE are found in Europe, Asia, Africa, America, and Oceania. The British Empire includes an area of 11,483,283 square miles, and a population, estimated in 1907 at 392,864,835. Hence in size and populousness it is superior to the half-fabulous Cathay of Kublai Khan. Perhaps China can count a few more human beings, packed upon her congested territory. Otherwise, in globe-extended variety of situation as well as in total area, and in multiplicity of races and languages beneath one scepter as well as in number of inhabitants, the British Empire surpasses every other empire of the present or past. It is the mightiest and, taken all in all, the freest empire the world has ever seen.

The British colonies and dependencies are sometimes roughly grouped in two classes. The first class, called "Crown Colonies," consists of those in which the home government of Great Britain exercises entire control. The second class consists of those in which a greater or less degree of self-government prevails. This second class is sometimes further divided as those possessing "Representative Government" and those enjoying "Responsible Government." The former legislate for themselves but the home government controls the public officers and may veto legislative acts. The latter are practically self-governing, as the home government exercises no control over any public officer though it appoints the governor and may veto legislation. These classifications, while not strictly accurate, may be employed for convenience. The special merit of British colonial government, a merit possessed in equal degree by no other colonial system of modern times, is its elasticity. It is the British principle not to seek uniformity but to allow liberty of detail, so far as

such liberty does not weaken or infringe upon the central home authority which is always paramount.

The official title of the British sovereign is, "Edward VII., by the Grace of God, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India."

BRITISH POSSESSIONS IN EUROPE.

Gibraltar is a rock, area 1 and ¾ square miles, population 27,460 of whom 6,475 are military, at the extreme southern point of Spain. Its name is derived from Jebel Tarik, the Hill of Tarik, a Saracen chieftain who landed there in 711. It was seized by the British in 1704 and though enduring many sieges since, notably in 1782, it has never been retaken. Nature and the most persistent care and skill have rendered it one of the strongest fortresses in the world. It is a crown colony, under a governor who is commander in chief.

Malta, area 95 square miles, or 117 square miles with the neighboring islands of Gozo and Comino, in 1907 population 206,690, is an island south of Sicily. It occupies the best strategic point in the Mediterranean and is the headquarters of the British Mediterranean fleet. The foundation stone of an immense breakwater was laid by Edward VII. on April 18, 1903. Held by the Knights of St. John, after their expulsion from Rhodes, it successfully in 1565 withstood a tremendous siege by the Ottoman Turks and inflicted upon them their first great defeat. Surrendered to Napoleon in 1798, it passed to the British in 1800, who have held it ever since. It may be said to possess representative government, though this is subject to suspension.

BRITISH POSSESSIONS IN ASIA.

THE opening of the Suez Canal in 1869 shortened by thousands of miles the distance by sea to Southern Asia. To dominate and control this new route, by which her Indian Empire might be reached, was of prime necessity to Great Britain. The canal itself was neutralized. Through the possession of Gibraltar and Malta Great Britain was supreme in the western and middle Mediterranean. Egypt is in fact a British province. While certain localities along the route were of minor consequence to her, it was imperative that those points should not be held by any other great power. With equal tenacity and sagacity she has so preëmpted and occupied and fortified along the way that her road to India is now vulnerable at no point. Cyprus, Perim, Aden, Socotra, the Kuria Muria Islands, Oman, the Bahrein Islands are all either directly under British control or entirely under British influence.

Cyprus, area 3,584 square miles, population 237,022, is the third largest island in the Mediterranean, situated in the northeast angle of that sea. In this island Venus had her most famous temple. Richard the Lion-hearted captured it from the Mussulmans. It has had many masters. In 1571 the Ottoman Turks took it from the Venetians. After the Russo-Turkish war, it passed to Great Britain in accordance with a convention, though an annual tribute of £92,800 was to be paid to the Sultan. About four fifths of the inhabitants are Greek Christians. The island possesses representative government under a British High Commissioner. It has prospered under British rule.

Perim, area 5 square miles, is a strongly fortified island rock at the entrance of the Red Sea in the Strait of Bab el Mandeb. The strait is 15 miles wide and its deep channel is divided by Perim. The island was occupied by the British in 1857 on account of the proposed cutting of the Suez Canal.

Aden, area 75 square miles, "the Gibraltar of the East," is a peninsular rock, city and harbor on the extreme southern coast of Arabia, one hundred and five miles east of Bab el Mandeb. The British East India Company made it a depot for coal and a coaling station in 1839. The British and Ottoman commissioners rectified the boundary in 1905, so that now Great Britain holds a protectorate of Aden, embracing 9,000 square miles. Great sums have been expended on the fortifications and harbor. A Political Resident administers affairs and also commands the troops of Perim, Aden and the protectorate. Directly opposite in Africa is the British Somali Coast Protectorate.

Socotra, area 1,382 square miles, population 12,000, is an island farther east at the entrance to the Gulf of Aden. It was acquired by Great Britain in 1876. The inhabitants were Christians until the close of the seventeenth century, when they were converted to Islam.

The **Kuria Muria Islands**, of southeastern Arabia, were obtained from the Sultan of Muscat as landing place of the Red Sea Cable.

Oman, area 80,000 square miles, population about 800,000, in southeastern Arabia on the Persian Gulf, Gulf of Oman and Indian Ocean, is an "independent" State, entirely under British influence. A British political agent resides at the capital, Muscat. The internal troubles of the State have been many. Jask, a seaport on the Persian coast of the strait of Ormuz; and Basidu, a port at the entrance of the Persian Gulf, formerly belonged to Oman but are now British.

The **Bahrein Islands**, eight in number, area about 120 square miles, population about 70,000, are situated on the south side of the Persian Gulf. They are famous for their pearl fisheries.

With the exception of Cyprus, the official relations of all the foregoing are directly with the government of India.

THE EMPIRE OF INDIA.

BY reason of its great size and peculiar geographical isolation, India almost deserves to be called a continent by itself. For this reason also its political history has no unity, but is the story of various races and creeds acting and reacting upon each other within a territory so vast as to admit the presence of several powerful nations representing different degrees of civilization at one and the same time. The India of prehistoric ages was apparently well populated by so-called aborigines of at least three distinct stocks when it was invaded by a branch of the great Aryan family in the second millennium B. C. The intermixture of Aryans and aborigines constitutes the bulk of the population there to-day. Upon this mixture have been precipitated during 2,000 years many invasions of barbarous Turanians from across the Himalayas, invigorating the blood of a population whose inevitable tendency toward physical decline was the result of a tropical climate and a bountiful soil. To this essentially foreign element from the north was due the extension of Buddhism, which arose in the Ganges valley as a protest against decadent Brahmanism and developed into a great unifying influence of immense political importance, to disappear at length from the place of its birth while its sway reached eventually the uttermost regions of Asia.

The internecine quarrels between the sundry creeds and races of India were crushed in the eleventh century A. D. by successive invasions of Mussulman Tatars and Afghans from the northwest. The cohesive influence upon the invaders of their militant creed made them superior to the incoherent mass of natives. By the thirteenth century they had conquered nearly the whole of India, which remained more or less under Mussulman rule until their scepter passed to Great Britain. Much the most powerful and effective of these various Moslem dynasties in India was that of the Moguls or Mongols, descendants of Timur the Great, who established themselves in Delhi in 1556 and reigned with splendor until 1707. The last monarch of the line was not removed until the suppression of the Sepoy mutiny in 1857.

Europeans found their way around the Cape of Good Hope and began to trade with India at the opening of the sixteenth century. No attempt on their part was made to secure anything more than trading stations or factories there until a renewal of the old condition of fratricidal wars in the eighteenth century announced the decline of Mogul supremacy. Then began a contest between European traders and native chiefs, coupled with a sharp and warlike rivalry between the European nations themselves, which terminated early in the nineteenth century with the complete mastery of the British. The relations between England and India since that time constitute a political situation unprecedented in history. There is no previous instance to be found of the acquisition and successful government of such a dependency, so immense in extent and so powerful, at such a distance from the central power. This magnificent conquest was made piecemeal by the English, under servants of the great trading corporation known as the East India Company. An anomalous feature in the process was the reluctance of Englishmen at home to seize the great prize within their grasp, while it was impossible to arrest the irresistible gravitation of the whole country toward them as one state after another crumbled and fell from anarchy or sheer inanition.

Government. An account of the government of India practically involves a history of its gradual acquisition by Great Britain. From the three early factories of the company there arose the three presidencies of Bengal, Bombay, and Madras, each with a governor, councils, and civil service of its own. Since 1858, the East India Company, through which England won and long ruled India, has been replaced by a Secretary of State for India, who is a cabinet minister, and is assisted by a council of ten, nine of whom must have lived ten years in India and none of whom is in Parliament. Executive authority is exercised by the governor-general in council. India is divided into nine administrative provinces, Madras, Bombay, Bengal, Eastern Bengal and Assam, Agra and Oudh, the Punjab, Burma, Central Provinces, Frontier Provinces. The governor-general and his executive council and the governors of Madras and Bombay are appointed by the crown. The territory directly administered by British officials covers about 1,100,000 square miles, exclusive of Burma, which is also under the viceroy's control. The rest of India, about 700,000 square miles, remains under the rule of native princes, who maintain their courts and troops and local governments, but are not allowed to have relations with foreign nations or to make war; the supreme government can also through its permanent residents at these native courts dismiss objectionable foreigners entertained there or dethrone the ruler in case of misgovernment.

The whole of British India is divided for administrative purposes into 259 districts, over each of which is an officer directly responsible to the head of the province in which he lives. Considerable independence is allowed to this officer and his subordinates, for upon his personal skill and tact in dealing with natives the success of British rule in India largely depends; he is often the chief, judge, instructor, and friend of the natives under him, and he alone is the embodiment of legal authority in the minds of millions of the peasantry.

Religion. The creeds of India have played an important part in the political as well as the spiritual life of its people. Its prehistoric inhabitants seem to have been deeply penetrated with the grosser practices common to all primitive cults. In contrast to this the Aryans brought into the country a worship of singular purity and elevation, without shrines or images or offensive rites. The gradual intermixture of the two races resulted in a deteriorated form of the higher religion known as Hinduism, the creed of three fourths of the inhabitants of India to-day. This has not been evolved, however, without some marked influences from Buddhism which arose in the sixth century B. C., was made the state religion in Hindustan by Asoka, 250 B. C., and flourished for about a thousand years side by side with Brahmanism. As a protest against the emptiness of the older creed Buddhism was at first extremely effective, but finally sank into decrepitude and was ejected from the land. Outside of a few in Bengal and Kashmir there are now practically no Buddhists in all India. The Jaina, an analogous but not an allied cult, still survives, notably in Bombay and Rajputana. Next to the Hindus the Mussulmans are most numerous, being counted at nearly 63,000,000, the great majority of them Sunnis. Other faiths found in India are the Sikhs (numbering 2,000,000), Parsis (about 100,000), and Christians of all kinds (about 3,000,000). Few regions of the earth have shown such an aptitude and passionate concern for diverse religions as has India.

Industry and Labor. India possesses under the favoring influences of climate and abundant rainfall some of the most productive lands in the world. The mainstay of its people has ever been its agriculture, which, under British administration, has, by the application of scientific methods, the extension of irrigation and systematic rotation of crops, yielded larger returns than at any past period. Its chief crops are wheat and other food grains, rice, cotton, opium, tea, sugar cane, tobacco, and indigo. Forests and mines are also increasingly productive sources of national wealth, while the development of manufactures with modern machinery, though still in its infancy, promises, with the abundant labor ready for employment, to be enormously profitable in the future. The value of the sea-borne external commerce of India amounted to over $600,000,000 in 1906–7.

Education. Though a vast majority of the inhabitants of India are unlettered, the eagerness with which boys seek the opportunities for education provided by the government is very striking. Only the vernacular is taught in the primary schools, which up to 1878 were rather neglected by the state. In 1907 there were 102,992 primary schools for boys and 9,992 for girls; also 5,347 secondary for boys and 567 for girls. Higher, normal, and technical schools have been established in every province, while at the head of the

national system of education — in which the teaching done is in English — stand the five universities of Calcutta, Madras, Bombay, Allahabad, and the Punjab. These are merely examining bodies that grant degrees, but they are affiliated with colleges which train students to meet their requirements. Only 3.4 per cent of girls of school age and 25.4 per cent of the boys attend school in India.

Defense. The army of India, upon which depends the continuance of British supremacy there, numbers 236,372 officers and men of all arms, of which 75,268 are British and the remainder trained natives. In 1895, the military control formerly exercised by the governors of Bombay and Madras ceased, and the army was divided into the Punjab, Bengal, Madras, and Bombay commands, each under a lieutenant general and all under the direct control of a commander in chief subject to the viceroy of India. In 1904 there was a further reorganization into three commands. In 1907 the whole force was again reorganized as the Northern Army and the Southern Army. An elaborate system of fortresses and strategic railways to protect the northwest frontier against invasion is now substantially completed. There are also coast defenses at Karachi, Bombay, and Hugli, supported by torpedo boats and gunboats and two coast-defense turret ironclad vessels. The total armies of the dependent and feudatory states amount to about 350,000 men, with little drill, discipline, or equipment. Since 1888 picked contingents, really capable of rendering aid to the imperial army, have been trained at the expense and suggestion of their native rulers. The total area of India is 1,766,642 square miles, 690,272 square miles of which is territory of the feudatory states. The population numbers 294,361,056, of whom 61,325,376 are inhabitants of the feudatory states; these now number about 22,800 in all.

DEPENDENCIES UPON INDIA.

CERTAIN states or territories are reckoned as dependent upon India. Such are BALUCHISTAN, SIKKIM, the ANDAMAN, NICOBAR and LACCADIVE ISLANDS, BHUTAN and NEPAL.

Baluchistan, area 138,885 square miles, population about 925,000, is a wild region, west of India and south of Afghanistan. The British first entered the country in 1876 and have been forced by circumstances to enlarge their control.

Sikkim, area 2,818 square miles, population about 60,000, is a little state in the Himalayas, south of Tibet. Formerly under nominal vassalage to China, in consequence of disturbances the British protectorate was recognized by the Chinese government in 1889.

The **Andaman Islands**, area 2,508 square miles, are a group of five large and about two hundred smaller islands in the Bay of Bengal, nearly one hundred and twenty miles from Burma. They contain forests of great value. Now they serve as penal settlements. In 1907 they were the habitation of 14,496 convicts, of whom 704 were women.

The **Nicobars**, area 635 square miles, population about 6,400, are nineteen islands south of the Andamans. Their main occupation was formerly piracy and shipwrecking. Also they have plied the coconut trade for 1500 years. About 15,000,000 nuts are raised annually. Since the British occupation in 1872 the islands have become orderly.

The **Laccadives**, the "Hundred Thousand Islands," population about 10,000, are a group of uncounted coral islands and islets west of the Malabar coast.

Bhutan, area 16,800 square miles, population about 40,000, is an "independent" state in the eastern Himalayas, east of Sikkim and south of Tibet. Since 1865 the penlops or chiefs receive an annual subsidy of 50,000 rupees in return for good behavior.

Nepal, area 54,000 square miles, population about 5,000,000, is another "independent" state in the Himalayas. It stretches, a narrow mountainous belt, for five hundred miles between Tibet and India as far east as Sikkim. The prime minister of the Maharaja holds rank of a British major general. This is the land of the famous Gurkhas, who invaded Tibet, and carried on war with China and India. Since the treaty of Segowlie in 1815, a British resident has lived at Katmandu, their capital, and their relations with the British have been friendly. In Nepal are Mount Everest, height 29,002 feet, and some of the loftiest mountains on the globe.

1658. **Aurangzeb**, having supplanted and overthrown his brothers, the sons of Shah Jahan, **secures the throne** by treachery and violence, and proclaims himself emperor; he fixes his capital at Delhi.
1676. The **Mahratta power** rises under the auspices of Sivâji, who, holding the rock forts of his native Ghats, resists Aurangzeb until 1686, when Bijapur and Golconda are taken by the emperor. Gurn Govind remodels the Sikh government and establishes it as a nation.
1682. Aurangzeb makes a victorious invasion of the Deccan.
1707. Aurangzeb dies; the **Mogul Empire** begins a rapid and fatal **decline.**
1712. Badâdur Shah, son and successor of Aurangzeb, dies, and a **period of disorder** ensues.
1739. **Nadir Shah of Persia** overruns Hindustan, and sacks the city of Delhi, virtually extinguishing the Mogul dynasty.
1756. The subahdar of Bengal, Surajah Dowlah, captures Calcutta and crowds the English captives into the **Black Hole.**
1757. **Lord Clive** leads British troops to the recapture of Calcutta and overwhelms Surajah Dowlah at Plassey, June 23, 1757.
1758. Lord Clive is made governor of Bengal.
1760. The British defeat the French at Wandiwash in January.
1761. Ahmad Shah Durâni, the Afghan, in the battle of Panipat wins a great victory over the United Mahratta confederacy, whereby the **Mohammedans recover** in a measure **their ascendency** in India.
1764. The battle of Buxar gives the **British control of all Northeastern India.**
1765. Bengal, Behar, and Orissa are ceded to the British East India Company by the Mogul ruler. In his second governorship Lord Clive institutes a **double (English and native) government.**
1767. Final departure of Clive from India. The English become involved in a war with **Hyder Ali**, rajah of Mysore, but a peace is concluded two years later, at Madras.
1772. **Warren Hastings** is made president of the supreme council in **Bengal**; two years afterward he becomes the first governor-general of India.
1774. Hastings conducts the **Rohilla War.**
1779–1782. First British war with the Mahrattas.
1782. Haidar Ali dies and is succeeded by his son, Tippu Sultan, as rajah of Mysore.
1784. Tippu Sultan makes a treaty of peace with the English. Pitt's bill establishes a **Board of Control for India.**
1790. Second Mysore war begins.
1792. The English secure from the rajah a large part of Mysore.
A third Mysore war follows, and in 1799, on May 4, the **British storm Seringapatam**, where Tippu Sultan is slain.
1802. Treaty of Bassein, by which the Mahratta Peishwa acknowledges the suzerainty of the British.
1803. The English wage a war against the Mahratta sovereign, Jaswant Rao Holkar. The **battles of Assaye, Argaum, and Aligarh** are fought.
1805. A peace is signed in December. Ranjit Singh begins to reign over the Sikhs.
1814. **A conquest of Nepal** is made by the British.
1817. The Mahrattas provoke another conflict, which ends in crushing their authority, and the extinction of the Peishwa.
1818. Mulhar Rao Holkar, the ruler of Indore, grants territory to the British and makes his formal submission as a tributary prince. The Pindaris also are subjugated by the English. The Raj of Satara is resuscitated.
1824. **First British war with Burma** is fought, with the annexation of the coast provinces.
1839. In April the **English invade Afghanistan,** marching into Kandahar. On July 22 Ghazni is captured, and a month later Kabul is seized. Shah Shujah is then made the nominal sovereign of the region, assisted by British subsidies.
1841. An insurrection takes place in Kabul, and Sir A. Burnes, the British resident, and many Europeans are massacred. In December of the same year Sir William Macnaghten is murdered.
1842. The **British,** forced to **retreat from Kabul,** are attacked by Afghans in the Khaibar Pass and overwhelmed; but one out of 16,000 troops and camp followers escaping. Jalalabad is successfully defended by General Sale, while General Nott maintains his position in Kandahar. Shah Shujah, left at Kabul, is assassinated. In April, Jalalabad is relieved by General Pollock, who has forced the Khaibar Pass. In September, Pollock enters Kabul, and the **English withdraw from Afghanistan.** Dost Mohammed Khan becomes ameer.
1843. On the completion of a victorious campaign under the command of Sir Charles Napier, **Sind** is added to British India.
1845. The **first war with the Sikhs** begins; victories are gained by a force under Sir Hugh Gough at Mudkee and Firozshah, in December. In the following year, in January, at Aliwal, and in February, at **Sobraon,** Sir Hugh wins decisive victories, so that the Sikhs conclude a peace at Lahore and surrender a large region to the East India Company.
1848. The **second war with the Sikhs** is brought on by the revolt of Sher Singh. Satara lapses to the British government upon the death of its rajah without heir.
1849. At Chillianwallah, January 13, Sir Hugh Gough vanquishes the Sikhs, and again on February 21, at Gujerat. The **annexation of the Punjab** follows.
1851. **Second British war is fought with Burma,** and Pegu is annexed.
1856. The **Province of Oudh** becomes a part of the British East Indian Empire. Persia attacks Herat; war with the British ensues; the shah's forces are compelled to retire, and peace is concluded in the following March.
1857. The **mutiny of the Sepoys** in British India begins at Barrackpur, in March. In May the mutineers gain possession of Delhi; in the same month the mutiny breaks out in Lucknow. In the following month it begins in Benares. The rebels in Cawnpur are headed by Nana Sahib, rajah of Bithur, who causes the massacre of the Europeans in Cawnpur, July 15. Sir Henry Havelock forces the mutineers to withdraw from Cawnpur, and in September Delhi is retaken. In September also Havelock forces his way to Lucknow. In November, Havelock and General Outram, surrounded in Lucknow, are relieved by troops under Sir Colin Campbell, who a month afterward defeats the enemy at Cawnpur.
1858. In March, Lucknow is retaken by Sir Colin Campbell, and in June Sir Hugh Rose captures Gwalior. The **mutiny** is practically **ended,** although sporadic fighting continues for some time. The British parliament passes an act by which the **government of British India** is transferred from the East India Company and given to the **direct control of the crown.**
1868. Sher Ali, one of the contestants for the Afghan crown, recovers the throne after a defeat in the previous year.
1876. On April 28, Queen Victoria formally assumes the title of **Empress of India;** she is proclaimed empress at Delhi, January 1, 1877.
1878. In August the ameer of Afghanistan, Sher Ali, receives a Russian embassy under Stolietoff. In September the embassy under Sir N. Chamberlain sent by the English viceroy, Lord Lytton, is barred at Ali Musjid, by order of the Afghan commandant. On November 2, an ultimatum is sent to Sher Ali by the viceroy, and on November 21, a force of British soldiers marches into Afghanistan. Ali Musjid is attacked by General Browne, who on the next day occupies the fortress. On December 2, **General Roberts** defeats the natives at the **Peiwar Pass.** The Russian embassy withdraws from Cabul and Sher Ali flees, December 13, leaving his son, Yakub **Khan,** in authority; Jalalabad is occupied by a force under Browne.
1879. In January, Biddulph and Stewart seize Kandahar and Kelat-i-Ghilzai. On February 21, Sher Ali dies in Turkestan, and his son, Yakub, succeeds to the sovereignty. In April the British move on Gundamuk, whither Yakub Khan comes and arranges a treaty, which is signed May 26. On July 24, a British embassy under Sir Louis Cavagnari reaches Kabul in force, but the treacherous murder of the envoy and his officers renews the war. On October 1, the main body of the army under General Roberts crosses the Shutar-Gardan Pass, and on the following day an attack by the Ghilzais is repelled. On October 6 he wins a victory over the natives near Kabul and enters the city, October 12; Yakub Khan abdicates. General Roberts withdraws from the capital and occupies a fortified place at Sherpur. In December he defeats the Afghan tribesmen, and **Kabul is regained.**
1880. Abdur Rahman Khan, grandson of Dost Mohammed, is recognized by the British as ameer of Afghanistan. After avenging a check to English arms at Maiwand in the following year, the British troops are gradually withdrawn; Kandahar is evacuated; and the ameer is left to consolidate and extend his sway over his truculent subjects.
1885. The **Russians** under Komarov **seize the Zulfikar Pass** on the way to Herat, and attack the Afghans on the Kushk, March 30. These actions are regarded as evidences of hostility toward the English, but a settlement is made by which Russia gains in a readjustment of the line between Afghan-

Istan and Turkestan. (See PERSIA.) For the first time the native princes in India offer money and troops to the British in this supposed emergency.
A **national congress** composed of delegates from the principal political societies of India begins its annual meetings at Bombay.

1887. Lady Dufferin interests herself in the **medical education of Hindu women** and in other measures for the amelioration of their condition.

1888. A war known as the **Sikkim war** occurs as the consequence of an attempt made by the Indian government to expel the Tibetans from Sikkim. On September 24, a battle is fought at Tukola ridge; the Tibetans lose a thousand men; and the rajah submits in October.

1889. A serious famine occurs in Ganjam, a coast province of Madras; following this is an epidemic of cholera.

1890. The question of **child marriage** in India is agitated; serious efforts are made by the government, instigated by reformers, to advance the age of marriage for girls.
A palace upheaval in the Hill state of Manipur, adjoining Assam, involves the murder (March, 1881) of the British Resident, and another "little war" to punish and reëstablish order. An expedition is made from Bhomo against Kan Hlaing, chief of the Tonhon Kachyens, to punish him for his aggressions on the British territories.

1891. Owing to the coincident dates on which the Hindus and the Mohammedans celebrate several of their annual feasts, serious **riots** occur; the Buddhists take sides with the Hindus against the Islamites.

1892. The **famine** in Bombay, Madras, and Rajputana continues; the government opens works of relief employing nearly 250,000 men besides organizing charities and distributing food.
The anti-opium resolution passed by the House of Commons in the preceding year is warmly resisted by the Indian officials.
In hopes of checking the falling value of the rupee, and if possible to facilitate the introduction of a gold coinage into India, the **mints are closed** to the **unrestricted coinage of silver.**

1894. An expedition is sent against the Abors of Assam to punish them for alleged aggression on British territory; the resistance offered by the Himalayan tribes is so great as to cause the withdrawal of the British.

1895. The **Royal Commission** appointed by Parliament to consider the **opium traffic** of India reports in favor of supporting the East Indian government in its attitude against the House of Commons. Upon the murder of the ruler of Chitral, a mountain state on the northwest frontier, the tribesmen revolt against the new chief and his English supporters. A siege of six weeks sustained by a handful of British officers and 400 Indian troops in a wooden fort is raised by relieving forces sent from the north and south after a brilliant and determined campaign above the snow line. Chitral is garrisoned by the British.

1896. The Northwest Provinces and Oudh, the Central Provinces, and Rajputana are visited with famine; a plague of typhus and other epidemics follows. Two hundred and fifty thousand people fly from Bombay, and the business of the city is prostrated. The Moplahs on the southwestern coast rise in rebellion and commit fanatical outrages on the Hindus until they are suppressed by a division of the native army.

1897. The cost and difficulties of British government in India are materially increased by **war, plague, and famine.** The terrible drought of the previous three seasons is ended by a return of seasonable rains, but there is much destitution in Northern Deccan until the crops have been grown and gathered. During the summer occurs a renewal of the bubonic plague in Bombay and its first appearance in other places. There is fierce resistance by the natives to the necessary examination of their houses and persons.
In the summer the **independent mountain tribes** on the northwest frontier of the Punjab, aroused by their fanatical mullahs, attack the British forts in considerable force. An army of 70,000 men is mobilized, of whom 35,000 are at once sent to the front. The transportation department, greatly hampered by losses of beasts, owing to the famine, cannot get the impedimenta forward over a difficult country where there is no water. The war consists of incessant attacks on mountain passes, followed by retreats from untenable positions. After an arduous autumn campaign, the Afrids, the chief tribe of the enemy, accept the terms offered, surrender a certain number of their rifles, and return to their high valleys.

1898. In March, **plague riots** break out in Bombay, serious enough to menace the supreme authority there, and to spread throughout all India an uneasy feeling of revolt against foreign rule.

1899. Gold standard adopted; value of rupee fixed at about 32 cents.

1900. Famine steadily increases during 1899 and 1900; 3,784,000 persons receive aid in February.

1903. The crowning of King Edward VII. as Emperor of India is celebrated by a **Durbar** at Delhi. It begins December 29 with the formal entry into Delhi of Lord Curzon, the viceroy, and the Duke and Duchess of Connaught, representing the King and Queen of England. December 31, more than 16,000 prisoners are liberated. On January 1, 1904, with an imposing ceremony, the coronation proclamation is made on the spot where Queen Victoria was declared Empress of India in 1877.

1904. In May Lord Curzon is received most cordially in England.
The long-violated Tibetan conventions are displaced by a **treaty with Tibet** signed September 7, after ten months of fighting and negotiations have brought the forces of Col. Younghusband to Lhasa, August 7. The treaty binds Tibet to keep open certain trade routes to India, pay an indemnity of $2,500,000, and refrain from selling or leasing territory to foreign powers or allowing such powers to open trade routes or mines. Russia and Germany protest.

1905. August 20, Lord Curzon resigns because of a difference of opinion with Lord Kitchener concerning army administration. Earl of Minto is appointed his successor.
November 9–March 17, 1906, the **Prince and Princess of Wales** make an extended tour through the Indian Empire, being everywhere received with expressions of loyalty and good will.

1906. August 3, Sir Bampfylde Fuller, lieutenant governor of Eastern Bengal and Assam, resigns, desiring more energetic policy in dealing with disaffection.

1907. April–June. Disorders and agitation in Bengal and the Punjab necessitate the deportation of some native malcontents. June 1, Lord Kitchener's scheme for **reorganization of the Indian army** goes into effect. December 23, attempted assassination of the magistrate of Dacca at Goalundo.

1908. May 4, many persons are arrested in Calcutta on charge of implication in a great murder plot.
May 6, Parliament abolishes the system of licensing opium-smoking joints in India and Hongkong.
October 24, the *Bande Maturam*, a newspaper, is confiscated because of seditious utterances.
November 1, Edward VII. sends a special message to the peoples of India, granting certain privileges and political rights.
Throughout the year much native unrest is apparent. But the Secretary for India, Viscount Morley, exhibits a conciliatory spirit though employing firm measures of repression.

1909. March 22, budget shows a large deficit attributed to famine, poor trade, and high prices.

CEYLON.

CEYLON, area 25,332 square miles, in 1907 population 3,988,064, is an island in the Indian Ocean southeast of the southern extremity of India. Because of its marvelous fertility and luxuriant vegetation it is called the "pearl garden of the world." Coast settlements were founded by the Portuguese in 1505, which were captured by the Dutch in the seventeenth century and lost by them to the British in 1796. Two years later Ceylon was made a colony. The governor is assisted by an executive council of five high British officers and by a legislative council of 17 members, among whom are eight persons named by the governor to represent the various races of the country. The island often serves as place of confinement for prisoners of war. Arabi Pasha and many of the Boer captives were exiled here.

FEDERATED MALAY STATES.

THE FEDERATED MALAY STATES occupy a large part of the Malay Peninsula. They are Perak, Selangor, Pahang and Negri Sembilan. Since 1896, when those states came under the administration of a British Resident General, there has been a marked decrease in crime. Their area is about 26,900 square miles. The population in 1901 was 676,998, of whom 487,690 were males and 189,308 females. Disproportion in sex was due to influx of Chinese.

STRAITS SETTLEMENTS.

THE STRAITS SETTLEMENTS, area 1,550 square miles, population 572,249, is a crown colony. It occupies the southern extremity of the Malay Peninsula and includes the settlements of Singapore, Penang and Malacca. Since 1907 the colony of Labuan has been incorporated with Singapore. Singapore, area 206 square miles, in 1901 population 228,555, is an island. It is a strongly fortified naval station and port of entry. Penang, hardly less important, is also an island. Great Britain also has controlled the neighboring state of Johore in its foreign relations since 1885.

BRITISH BORNEO.

BRITISH BORNEO, lying southeast of the Malay Peninsula and northwest of the Philippines, comprises the northern part of the island of Borneo, and includes: British North Borneo, area 31,106 square miles, population 160,000; Brunei, area 3,000 square miles, population 25 000; Sarawak, area 42,000 square miles, population 500,000. British North Borneo is under the jurisdiction of the British North Borneo Company. The British government proclaimed a protectorate in 1888. Since 1906 Brunei has been under a British Resident. Much of Sarawak was obtained from the Sultan of Brunei by Sir James Brooke. He organized and greatly benefited the country, where his family still bear rule under British protection.

HONGKONG.

HONGKONG was ceded to the British in 1842 by the treaty of Nanking at the conclusion of the Opium war. It is an island off the southeastern coast of China, situated in the Canton river about 90 miles from Canton. In 1898 Great Britain obtained a lease for 99 years of 376 additional square miles, including the port of Kowloon and the territory on the mainland in the immediate vicinity. Hongkong is a crown colony. It is a first-class military and naval station and a free port. A larger tonnage enters and clears at Hongkong than at any other port in the world. Its population in 1906 was 319,803.

WEIHAIWEI.

WEIHAIWEI is a strong fortress in the Chinese province of Shantung. It was leased to Great Britain in 1898 for as long a time as Russia should hold Port Arthur. In addition were included all the islands in the bay and the entire coast line 10 miles wide. The area was about 285 square miles. Within a further additional area of 1,500 square miles Great Britain has the right to take such military measures as she deems expedient. Weihaiwei is a free port. There has been great increase of prosperity since the British took possession.

BRITISH COLONIES, DEPENDENCIES, AND PROTECTORATES IN AFRICA.

EGYPT.

THE Egypt of antiquity may be regarded as ending with the establishment of the Arabian dominion in 640 A. D. The country became one of the caliphates of Islam, and this political condition was maintained for 610 years. In the year 1250, Egypt was conquered by the Mamelukes, who, from being a race of slaves, rose by insurrection to become the dominant people of the country. The Mamelukes were, in the first place, to the number of twelve thousand, bought by the sultan of Egypt from Genghis Khan; they were Tatars and Turks. After the revolution of 1250 the Tatar-Mameluke dynasty was established. This line of sovereigns continued in the ascendant until 1382, when the Circassian slaves of Egypt rose against the reigning house and established a new line of sovereigns designated as the Circassian-Mamelukes.

This dynasty continued in authority to the year 1517, when the sultan Selim I. invaded and subdued Egypt. The Mamelukes were thus made subordinate to the Ottoman empire. In the two centuries following, the dependency became nominal rather than rigorous; and the Mamelukes were still, at the close of the eighteenth century, in power in Lower Egypt.

Such was the condition of the country when, in 1798, Napoleon Bonaparte invaded Egypt and on July 23 almost destroyed the Mamelukes in the battle

of the Pyramids. Napoleon sought to obliterate the Turkish power in Africa as a preliminary to his intended attack upon the Ottoman empire in Asia and Europe. After the unsuccessful siege of Acre he was obliged to recede. Egypt was left in command of General Kleber, and in 1801 the French army evacuated the country. The Mamelukes emerged from their suppression, and after the successes of the British they were able to recover much of their lost power.

It was in the year 1804 that Mehemet Ali, first viceroy of Egypt, was raised to the rank of pasha. Though subject to the Sultan he gained a virtual independence. His ascendency was established in 1811, when the Mamelukes were put down with a strong hand. Mehemet affected European methods and became a powerful ruler. In 1830, he made a successful invasion of Syria, and then challenged the Sultan to open war. In 1839, the Turks were defeated in the battle of Nizeeb. Then the Western powers came on the scene and obliged Mehemet Ali to resume his relation as a viceroy of the Ottoman empire. In his last years, Mehemet's mind became clouded, and the Sultan, in 1848, appointed Ibrahim, son of Mehemet, as regent of Egypt. Ibrahim died within the year, and the regency was assigned to Abbas Pasha, the grandson of Mehemet. But the policy of the new pasha was opposed to that of his grandfather, and a period of reaction ensued; Abbas died in 1854.

Said Pasha next acceded to the viceroyalty. He was an uncle of Abbas. His reign was uneventful to its close. In 1863, he was succeeded by Ismail, son of Ibrahim, who became pasha, and who, four years afterwards, was designated by the Sultan as *khedive* of Egypt. The policy of Mehemet respecting independence and the internal development of the country was followed by Ismail; but he negotiated great foreign loans and levied intolerable taxes upon the people. In 1879, a revolt occurred which became a revolution; the Khedive was expelled and his son Tewfik was established in his stead. The father, however, had so involved the country that Tewfik was obliged to appeal to Western powers for aid. Not even the interest on the public debt could be discharged.

In this emergency Great Britain and France became, in all but the name, the managers of the Egyptian treasury. It was this humiliating condition of affairs which led to the great insurrection of 1882, when Arabi Pasha, the minister of war, actually took the lead of the insurgent party against the government. Great Britain and France were obliged to support Tewfik in order to make good the national debt *due to themselves*. In July of 1882, Alexandria was bombarded in the interest of the foreign bondholders. Soon afterwards Arabi Pasha was defeated by the British army, and Tewfik was reëstablished as khedive. The direction of Egyptian finances was assigned to Great Britain and a British officer was put in command of the Egyptian army. A Turkish Commissioner represents the Sultan at Cairo and a tribute is paid, but the control of affairs by Great Britain is practically absolute. The expense of a British army of occupation, numbering about 5,000 men of all ranks, is partly defrayed by Egypt.

After the overthrow of Arabi Pasha, El Mahdi, the fanatical prophet, appeared as leader of a revolt in the Sudan. He brought down an army from the south, and not only the foreign but also the domestic authority in Egypt was threatened with extinction. In 1884 General Charles George Gordon was sent with a small British force into the Sudan. Left without support he was cooped up in Khartum, and in January, 1885, the town was stormed, and Gordon was killed. The British forces had to abandon the Sudan; but their support was still extended to Tewfik, whose reign ended in January, 1892. The succession went to his son, Abbas Hilmi Pasha.

The new sovereign, in the beginning of the following year, reconstructed his council, and in doing so offended the British representatives in Egypt, for which he was obliged to apologize. He showed from the first an ambitious disposition. In July of 1893 he made a visit to the Sultan at Constantinople and appealed to that potentate to secure the evacuation of Egypt by the English. His hostility to British control increased. In 1894, he made a journey of inspection to his frontiers with a view to placing native Egyptians in charge of affairs to the exclusion of Europeans. He pressed this policy as far as he could without actually beginning hostilities against the British. Matters came to a crisis in 1894, when the Khedive was obliged to publish in the *Official Gazette* a forced eulogy on the foreign officers commanding in Egypt. Since that time the baffled Khedive has interfered but little in affairs, and under British rule Egypt has enjoyed great prosperity.

The area of Egypt is about 400,000 square miles, of which less than 20,000 square miles is capable of cultivation. The population in 1907 was 11,206,359, an increase of 1,500,000 in the last ten years.

1768. The Egyptians under the leadership of **Ali Bey revolt** against the Ottoman authority.

1798. Napoleon Bonaparte with a French army lands at Alexandria and undertakes the expulsion of the Mamelukes. On July 23, the **battle of the Pyramids** is fought and the Mameluke power seems completely broken. After the reverse of the French at Acre, the Mamelukes regain authority.

1801. The French are withdrawn from Egypt.

1804. **Mehemet Ali** is raised to the rank of **Pasha** at Cairo. He undertakes to Europeanize the country.

1811. March 1, Mehemet Ali massacres the Mamelukes and obtains the supreme authority.

1818. **Ibrahim Pasha**, son of Mehemet Ali, **conquers the Wahabis** and other insubordinate tribes.

1820. Alexandria is connected with the Nile by the Mahmoud Canal.

1830. Mehemet Ali openly revolts against the Ottoman Empire. He invades and conquers Syria.

1832. Mehemet Ali again routs the Turks at the battle of Konieh.

1839. The Turks are defeated, June 24, by the Egyptian troops in the decisive battle of **Nizeeb.** The Western powers interfere, and Great Britain begins a war to restore the authority of the Sultan.

1841. Admiral Sir Charles Napier bombards Beirut; on November 3 Acre is taken and the Egyptians are expelled from Syria. A treaty is concluded by which **Mehemet Ali** is recognized as **viceroy of Egypt.**

1848. **Ibrahim Pasha** succeeds Mehemet Ali as **viceroy** of Egypt. He dies and is succeeded on November 10 by **Abbas Pasha.**

1854. Abbas Pasha dies and **Said Pasha** succeeds.
The **Suez Canal is begun.**

1863. Said Pasha is succeeded by **Ismail Pasha** as **viceroy** of Egypt. He receives from the Sultan the title of Khedive.

1869. The **Suez Canal is completed,** and on November 17 is formally opened in the presence of the Empress Eugénie of France, Emperor Francis Joseph of Austria-Hungary and other notables. The Khedive visits England.

1870. An expedition under the command of **Sir Samuel Baker** is sent up the Nile to suppress the slave trade and to establish the authority of Egypt in the Sudan.

1875. Great Britain purchases the interest of the Khedive in the Suez Canal. Ismail Pasha undertakes a war against Abyssinia; in the following year his forces are routed at Gura.

1879. **Ismail Pasha** is deposed by the Sultan from the viceroyalty of Egypt, and his son, **Tewfik Pasha,** is made khedive instead.

1881. **Arabi Bey** leads a military revolution in Cairo; an assembly of the notables is called by the Khedive. The fanatic **El Mahdi** leads the revolted tribes of the Sudan against the authorities in Egypt.

1882. Arabi Bey becomes secretary of war; the Anglo-French control of Egyptian finances is practically abandoned. On June 11 a massacre of Europeans occurs in **Alexandria** and the city **is bombarded** by Admiral Seymour. Arabi Bey is routed and captured by Sir Garnet Wolseley at Tel-el-Kebir; Arabi is banished.

1883. The insurrection headed by El Mahdi increases.

1884. In January, **General Charles George Gordon** advances into the Sudan. Baker Pasha is defeated by Osman Digma at Tokar, but Osman is in turn defeated by General Graham. Gordon is environed in Khartum. A relief expedition is dispatched and reaches Khartum, but not until the place has been taken and **Gordon slain** by the rebels. The English retire from the Sudan. El Mahdi dies.

1887. Stanley leads a successful expedition for the relief of Emin Bey.

1888. In December, the fortifications of Osman Digma near Suakin are captured by General Grenfell.

1889. In March, King John of Abyssinia is slain by the dervishes.

1897. The Egyptians again attack the Sudanese in June. **The Jaalin tribesmen are routed** at Abu Hamed.

1898. The **French flag** is raised **over Fashoda,** but, on Great Britain's protest that Fashoda is Egyptian territory, is withdrawn. In September, Sir Herbert Kitchener invades the Sudan. He defeats the dervishes at **Omdurman** and occupies Khartum and Fashoda.

1902. December 10, the **Assuan dam** at the first cataract of the Nile is formally opened, the Duke and Duchess of Connaught, Lord Cromer, the Khedive, and a distinguished Company being present. This dam provides for irrigation in the dry seasons and adds 1,600,000 acres to the arable lands.

1907. April 11, **Lord Cromer resigns** as British Resident in Egypt, after a public service of forty-nine years. Sir Eldon Gorst succeeds him.

THE ANGLO-EGYPTIAN SUDAN.

South and southwest of Egypt stretches an unbounded and almost boundless region, commonly called the Sudan. It touches on the west and south the vague frontiers of Kordofan and British East Africa. At various times a nominal authority was exerted over it by Egypt, but in 1882 the rise of the Mahdi broke the slight attachment and left the whole region in the hands of the Arabs and dervishes. Desultory but fierce fighting continued for years. General Gordon meanwhile fell a victim at Khartum. Finally the dervishes, despite their desperate courage, were crushed at Omdurman in 1898 and at Gedid in 1899, and all resistance ceased to the Anglo-Egyptian occupation.

A governor-general, whose duties are defined by agreement between Great Britain and Egypt, administers the territory. The Sudan is divided administratively into thirteen districts, the governor of each being a British officer who is at the same time an officer in the Egyptian army. The system of control in general resembles that employed in India. The slave trade is prohibited. Every effort is made to develop and utilize natural resources. Schools also are being introduced. Formerly gold dust, ivory, ostrich feathers, guns and hides were exported, but the war of nearly twenty years has interrupted trade.

The area is supposed to be about 1,000,000 square miles, and the population about 2,000,000.

BRITISH EAST AFRICA.

British East Africa, area 400,000 square miles, population about 8,000,000, lies between German East Africa and Abyssinia. It is controlled directly by the British Colonial Office. Regarding it arrangements have been made with Germany, the Sultan of Zanzibar and the Imperial British East Africa Company. It consists of the East Africa Protectorate, the Zanzibar Protectorate, and the Protectorate of Uganda.

East Africa Protectorate, area 177,000 square miles, population 4,000,000, is crossed by the equator and possesses immense natural tropical resources. American, British, French, German, Italian, and Swedish missions are working with success. It is traversed for a distance of 584 miles by the Mombasa-Victoria Railway from the port of Mombasa to the Victoria Nyanza. This Protectorate touches the frontier of the Anglo-Egyptian Sudan. So, from Mombasa, four degrees south of the equator, on the Indian Ocean, British control extends unbroken across the continent to Alexandria on the Mediterranean Sea.

Zanzibar Protectorate comprises the two islands of Zanzibar, area 640 square miles, and Pemba, 380 square miles. Their united population in 1907 was 245,000. Nominally the Sultan of Zanzibar still rules through a British Prime Minister. No enterprise can be undertaken and no expense incurred without the consent of the British Agent and Consul General. Cloves are the chief product. Protestant and Roman Catholic missions are maintained.

Uganda Protectorate, area 223,000 square miles, population 4,000,000, is situated far inland north of the Victoria Nyanza. It is said that here are found the richest flora and fauna in all Africa. The natural wealth is prodigious. Protestant and Catholic missions have accomplished wonders. The Church Missionary Society alone has 1,077 church edifices and reckons about 300,000 adherents.

BRITISH SOMALILAND.

British Somaliland, area about 70,000 square miles, population about 300,000, mostly Mussulman nomads, lies south of the Gulf of Aden and north of Italian Somaliland. Armed resistance to British rule ceased in 1905. With the introduction of order, settlements on the coast are springing up and trade is increasing. The exports are ostrich feathers, gums, skins, and hides. The country is administered by a commissioner, assisted by British army officers.

BASUTOLAND.

Basutoland, area 10,293 square miles, in 1904 population 348,626, is inclosed by the Orange River Colony, Natal, and Cape Colony. It is a native

reservation, settlement by Europeans being prohibited. A Resident Commissioner administers affairs under the High Commissioner for South Africa. It is better adapted for grain raising than any other region of South Africa.

BECHUANALAND.

Bechuanaland, area 275,000 square miles, in 1906 population 131,000, is a protectorate, lying between the Transvaal Colony and German Southwest Africa. The proposed Cape to Cairo Railway passes through it. A Resident Commissioner administers affairs under the High Commissioner for South Africa.

NYASALAND.

The Nyasaland Protectorate, area 43,608 square miles, population about 950,000, was known as British Central Africa until 1907. It lies west and south of Lake Nyasa. Under British control the natives seem orderly, prosperous and contented. Much is hoped from the attempted cultivation of cotton, and many agricultural experiments are being carried on.

RHODESIA.

Rhodesia perpetuates the energy and name of the British financier and statesman, Cecil Rhodes. It is an irregular-shaped territory, bounded northwest by Bechuanaland, Portuguese West Africa, and the Kongo Free State and on the east by German East Africa, Nyasaland and Portuguese East Africa. Its area is 435,000 square miles and the population about 1,500,000, of whom over 15,000 are Europeans. By royal charter of November 29, 1889, this vast territory was placed under the administration of the British South Africa Company. The capital of this company, originally £1,000,000, was gradually increased until in 1904 it was £6,000,000. The administration is based upon business principles. In consequence the introduction of western civilization has been attended with marvelous development of the country. It is the effort to respect the rights of the natives and to administer rigid justice. The Cape to Cairo Railway was opened to traffic on August 29, 1906, as far as the Broken Hill mine, 282 miles north of the Victoria Falls.

BRITISH WEST AFRICA.

The Colonies and Protectorates of British West Africa include Gambia, Sierra Leone, the Gold Coast, Southern Nigeria, and the North Nigeria Protectorate.

Gambia is situated at the mouth of the river Gambia, mostly on the island of St. Mary. It has an area of only 4 square miles and a population of 14,000. It was recognized as a colony in 1888. Both banks of the river inland as far as the French boundary gradually passed under British control until in 1901 the protectorate of the Gambia was formed, including an area of 3,615 square miles and a population in 1906 of 155,000. Groundnuts, beeswax, hides and rice are exported.

Sierra Leone stretches along the coast between French Guinea and Liberia. It is a colony dating from 1787, when fugitive slaves were sent there by a philanthropic society for the purpose of making a home for free negroes and of proving that slave labor in Africa was not a necessity. The original area, about 4,000 square miles in which are nearly 80,000 inhabitants, has been so increased as now to comprise nearly 30,000 square miles with a population of over 1,000,000. Freetown, the capital, has an excellent harbor, is well fortified and ranks as the chief seaport of West Africa.

Gold Coast extends between the French Ivory Coast and German Togoland for 340 miles along the Gulf of Guinea. It includes the colony proper, Ashanti and the protectorate with an area of 82,000 square miles and a population of 1,486,000. Chief products are palm oil, cocoa, and india rubber.

Southern Nigeria was organized in 1906, area 77,266 square miles, population about 6,000,000. It extends along the coast from French Dahomey to the German Kamerun and broadens in the interior. Administratively it is divided into three provinces, of which the western, including the harbor and island of Lagos, is the smallest and least populous but the most important. Here, as everywhere in Africa, Protestant and Catholic missions are carrying on a great work in civilization and education.

Northern Nigeria, area 256,400 square miles, population estimated in 1907 at 7,164,000, forms a protectorate, the boundaries being last defined by agreements with the Germans in 1893 and with the French in 1904. Paganism and Islam are predominant. The slave trade and slavery still linger, but are being gradually suppressed. Palm oil, rubber, ivory, ostrich feathers, and drugs are exported.

BRITISH SOUTH AFRICA.

CAPE COLONY.

Cape Colony, or, more correctly, the Colony of the Cape of Good Hope, occupies the extreme southern part of Africa. Settled by the Dutch in the seventeenth century, it was taken by the British in 1795. Relinquished and then retaken, it has been under their control since 1806. The Dutch colonists, or Boers, disliked British rule and emigrated in great numbers in 1836. The British government in 1849 determined to make Cape Colony a penal settlement. The first transport, conveying convicts, was met by the colonists in arms and compelled to carry the convicts back to England.

Cape Colony has enjoyed responsible government since 1853. Legislative authority is vested in a parliament, consisting of an elected legislative council of 26 members, holding office seven years, and of an assembly of 107 members, elected for five years. Both Dutch and English may be used in parliament. Executive authority is vested in a governor and executive council, appointed by the crown.

The main industries are agriculture, sheep and cattle raising, and diamond and gold mining. The sheep farms are of great size. Up to 1906 the value of the diamond output was about $665,000,000. In 1906 gold to value of about $120,000,000 was exported. The chief farm exports were wool, ostrich feathers, mohair, hides and skins.

There is no state church, but more than half the inhabitants are Protestants. Members of the Dutch Reformed, Methodist, Church of England, Independent, Presbyterian, Roman Catholic, Lutheran, Moravian, Rhenish Mission, and Baptist Communions are, as to numbers, in the order named.

The University of Cape Colony holds examinations and grants degrees, but does not teach. There are five colleges with equipped staffs. Primary education is not compulsory. About one half the European children of school age attend school.

Though of less military importance to the British Empire since the opening of the Suez Canal, yet the whole Cape peninsula is strongly fortified by a succession of batteries and forts. Here is the most important naval station of Africa. All men between the ages of 18 and 50 are liable to service. The Cape Mounted Police are a highly trained and efficient force.

Area 276,995 square miles. In 1904 population 2,409,804 (579,741 Europeans).

Dependent on Cape Colony is **Walfish Bay**, the name applied to a coast territory of about 450 square miles, inclosed on the landward side by German Southwest Africa and possessing one of the few good harbors on the coast.

The Annals follow **Orange River Colony.**

NATAL.

Natal derives its name from the landing of Vasco da Gama in 1497 on Christmas Day at Port *Natal*, "Nativity." The republic of Natal was organized in 1839 by Boers who had trekked from Cape Colony to escape British rule. The British annexed it to Cape Colony in 1856 and gave it responsible government in 1893. It was enlarged by the annexation of Zululand in 1897, and six years afterward several districts, formerly part of the South African Republic, were also annexed. It is situated on the coast, northeast of Cape Colony.

Executive authority is vested in the 6 state ministers, who, as well as a legislative council of 13, are named by a governor appointed by the crown. A Legislative Assembly of 43 members, elected for four years, meets annually and originates all financial bills. Agriculture and mining are the chief interests, maize furnishing the largest crop. There is no lack of government and private schools, primary, secondary and technical. Mounted police, militia, and rifle associations, numbering 9,600 men, provide for defense. In addition there are 54 volunteer cadet corps.

The area is 35,371 square miles. The population in 1906 was 1,151,907, of whom 94,370 were Europeans.

The Annals follow **Orange River Colony.**

THE TRANSVAAL.

The Transvaal includes nearly all the territory of the former South African Republic or Republic of the Transvaal. That republic was founded in 1849 by Boers who fourteen years previously, in order to escape British rule, had emigrated from Cape Colony to Natal and, on British annexation of Natal, had again emigrated, this time to a region beyond the Vaal. The British government recognized the independence of the republic in 1852, but annexed it in 1877. The Boers rose in arms, and in 1880 the autonomy of the republic was again acknowledged by Great Britain. Soon the discovery of gold at Witwatersrand attracted a host of foreign adventurers or uitlanders, whom the Transvaal authorities were reluctant to admit to citizenship. Great Britain constantly interfered in behalf of these uitlanders, and the Boers made many concessions. Finally fresh demands being presented, the Boers, believing their national independence in danger and being joined by their brethren of the Orange Free State, in 1899 issued an ultimatum to the British government. War followed and, despite the inequality of the two sides, lasted for nearly three years. The Boer leaders surrendered on May 31, 1902, but not till after the British Empire had put forth all its energies for their subjection and not until further resistance was hopeless. The British government, while requiring unqualified submission, was otherwise generous to the conquered. It granted the Boers £3,000,000 to assist in their restoration to their homes and furthermore advanced loans free of interest for two years. It promised self-government with representative institutions as soon as circumstances should permit. On December 6, 1906, in accordance with this promise responsible government was introduced.

Legislative authority is exercised by a legislative council of 15 members, at first appointed by the governor but eventually elective, and by an assembly of 69 elected members. The legislature meets annually. Executive authority is exercised by the six state ministers, named by the governor.

The main occupation is stock raising. Over 180,000 persons are engaged in gold mining and over 11,000 in the diamond fields. Since December, 1905, the importation of Chinese for mining purposes has been stopped.

About one half of the white population belong to the Dutch Reformed Church; next come Anglicans, Presbyterians, Methodists and Roman Catholics. The natives are mostly pagans. Elementary education is free and is gradually being rendered obligatory. There are more than 500 schools for white children. English and Dutch are taught in all and each pupil is obliged to learn Bible history. A Normal College and Transvaal University College afford advanced training.

The headquarters of the Lieutenant General, who has command of all the British forces in South Africa, are at Pretoria. There is an organized and well-disciplined body of 10,000 volunteers, active and reserve, and of 4,000 cadets.

The area, inclusive of Swaziland, is 117,732 square miles. In 1904 the population was 1,347,227, of whom 289,952 were whites.

ORANGE RIVER COLONY.

Orange River Colony was founded in 1854 as the Orange Free State, by Boers, who had emigrated first from Cape Colony and then from Natal to escape British rule. The State in alliance with the Transvaal Republic passed through all the phases of the South African war from 1899 to 1902 and was reduced to a colony on the victory of the British.

Responsible government was introduced on June 5, 1907. There is a legislative council of 11 members, now named by the governor but eventually to be elected, and an Assembly of 38 elected members. The legislature must meet annually. The executive authority is vested in the governor, without whose consent no law can be promulgated. The country is best adapted to grazing. All sorts of experiment farms and stations have been introduced. Coal, diamond and gold mining is carried on, and salt is produced. The Dutch Reformed Church includes almost all the white residents. Since 1905 primary education has been rendered compulsory. There is no lack of primary, secondary, and higher schools.

The area is 50,392 square miles. The population in 1904 was 387,315, of whom 142,679 were white.

1652. **Cape Town** in South Africa is **founded** by the Dutch.
1795. The British, under Elphinstone and Clarke, capture Cape Colony from the Dutch.
1802. By the treaty of Amiens Cape Colony is restored to the Dutch.
1806. Cape Colony is reconquered by the British.
1815. British possession is officially confirmed by the congress of Vienna.
1853. A **constitution is adopted** and proclaimed for the government of Cape Colony, and on July 1 of the following year, the first parliament of the colony convenes.
1855. Livingstone discovers and names the **Victoria Falls** on the Zambesi.
1858. Burton and Speke discover **Lake Tanganyika** and **Victoria Nyanza.**
1861. Sir Philip Wodehouse becomes governor of Cape Colony.
1864. The English explorer, Sir Samuel Baker, discovers the Albert Nyanza.
1867. The **diamond fields** of South Africa are **discovered.**
1871. Henry M. **Stanley** leads a successful expedition from Zanzibar to Ujiji in search for David Livingstone.
1873. Great Britain makes war on the Ashantis in West Africa. Sir Henry Bartle Frere conducts an expedition against Zanzibar and compels the sultan of that country to suppress the slave trade.
1874. Sir Garnet **Wolseley captures Kumassi** and ends the Ashanti war.
1877. Stanley demonstrates the identity of the Kongo (or Livingstone) with the Lualaba. The Transvaal Republic is annexed by Great Britain, and a war with the Kaffirs is begun.
1879. In January, the British in South Africa begin a **war with Cetewayo,** king of the Zulus. The campaign is at first unsuccessful, and in May Sir Garnet Wolseley assumes the command. The Zulus are routed at Ulundi and Cetewayo is taken prisoner.
1880. The Transvaal rises against the British authority.
1881. A force of British soldiers under the command of Sir George Colley is destroyed by the Boers at the battle of **Majuba Hill.** Great Britain consents to peace and to the autonomy of the Transvaal Republic.
1889. Portugal yields to the British demands in South Africa.
Weissman conducts a successful expedition against the Arabs of Zanzibar.
1890. **Great Britain** and **Germany** conclude a **treaty** respecting the boundaries of their African possessions. Zanzibar becomes a protectorate of England.
1893. Great Britain wages a **war against the Matabeles** in South Africa, and on October 20, they are routed in a bloody battle.
1896. **Dr. Jameson** with troops in the service of the Chartered Company leads a **raid into the Transvaal Republic;** he is disastrously defeated by the Boers at Krugersdorp and is captured.
1897. A revolt in Bechuanaland under Toto is suppressed by Colonel Dalgety in May.
1899. In October, negotiations to fix status of **uitlanders in Transvaal** fail; war with Great Britain follows.
British repulsed near Ladysmith, October 30; at Modder River, November 28; at Tugela River, December 15.
December 18, Lord Roberts made commander in chief in South Africa.
1900. British take but abandon **Spion Kop,** January 16. Lord Roberts enters Kimberley, February 15; Cronje surrenders, February 27; **Ladysmith relieved,** March 1. Roberts enters Bloemfontein, March 13.
Gen. Joubert, Boer commander in chief, dies March 27. 600 British are captured at Reddersburg, April 4. **Mafeking relieved,** May 18.
Annexation of Orange Free State to British Empire proclaimed, May 30. Johannesburg taken, May 31. Roberts enters Pretoria, June 5. July 29–August 9, several Boer leaders and 4,000 men surrender.
Annexation of Transvaal as The Transvaal is proclaimed September 1. Lydenburg captured September 6. Kruger leaves Transvaal for Europe September 12. Lord Roberts leaves Lord Kitchener in command December 12. British defeated at Nooitgedacht December 13, and Boers again invade Cape Colony.
1901. The war now becomes a series of guerrilla engagements scattered over a wide range of country. In March Lord Kitchener discusses terms of peace with General Botha, but with no results. The aim of the British is by superior resources gradually to exhaust the Boers. The Boers are successful in many small engagements, notably at Lindley in January, at Vlakfontein in May, at Moedwil in September, and at Brakenlaagte in October, in every instance with considerable British loss. Of the Boers 13,338 are killed, wounded, captured, or surrendered between January and November 1. On August 7 Lord Kitchener proclaims banishment to all Boers captured in arms after September 15. Of the noncombatants collected in concentration camps 12,441 died in six months, 10,113 being children.
October 5, an official report states the **British casualties for the war, as** 6,371 killed (including 548 officers), 29,561 wounded (including 1,529 officers), 10,738 deaths from disease and accidents. Up to April 1 the **cost of the war** to the British has been more than $750,000,000. This is twice that of the Crimean War, and largely in excess of the two most expensive years of the great Peninsular War of 1813 and 1814.
1902. The war is brought to an end by the **peace signed at Vereeniging,** May 31. It had been preceded by extensive operations of the British, driving the Boers against a line of wire-connected blockhouses, which resulted in the capture of many prisoners. The Boers had several isolated victories, — notably at Klerksdorp, February 24, where a wagon train and 450 men were taken, and in the Western Transvaal, where General Delarey captured General Methuen.
The **treaty of peace** recognizes the sovereignty of King Edward VII.; provides for the return of imprisoned Boers to their homes; freedom from prosecution for acts done in the war, with certain exceptions; the use of the Dutch language in schools and courts; the possession of arms under a license; the early resumption of a civil government, with representative institutions and local self-government, as soon as practicable; freedom from taxation for war expenses; the gift of $15,000,000 by Great Britain to aid in returning Boers to their homes and supplying their immediate needs; payment under certain conditions for property taken by the British for war purposes; a loan for two years without interest and longer at three per cent to those persons not rebels who may need such assistance.
By a further provision, citizens of Cape Colony in arms against Great Britain are to admit themselves guilty of treason, and are to forfeit the franchise for life.
June 22, Lord **Milner** becomes **governor** of the **Transvaal.**
November 19, martial law is abolished in the Transvaal.
1903. Early in the year Joseph Chamberlain, the colonial secretary, visits South Africa and is favorably received. His visit fosters amicable relations.
At Johannesburg on January 17 he announces that Great Britain will guarantee a development loan of $175,000,000 and that the Transvaal will raise $120,000,000 toward the cost of the war.
A customs union is formed providing free trade between the South African colonies and giving British goods a preference of 25% over foreign.
1903. Rebel prisoners of Cape Colony are released, March 23, but the Afrikander Bond's demand for complete amnesty is refused.
1904. In Cape Colony the Sprigg cabinet resigns, February 18, and Dr. **Jameson becomes premier.** He wins considerable support from the Dutch population. In the Transvaal on June 22 arrives the first shipment of Chinese coolies. Their introduction is considered necessary because of great lack of laborers.
1905. In the Transvaal interest during the year centers about the resignation of Lord Milner (succeeded by Lord Selborne), the grant of a constitution, and the Chinese labor question. Cape Colony suffers from trade depression throughout the year. Parliament adjourns, June 6, after passing a compulsory education law.
1906. March, natives in Natal refuse to pay taxes and begin irregular warfare. Cabinet resigns because British government interferes in matter of execution of natives, but withdraws resignations on British government's receding from its position.
September, during month Zulu outbreak in Natal is finally suppressed. More than 3,500 Zulus have keen killed and about 2,000 captured.
1907. February 20, in the Transvaal the Parliamentary elections result in a majority for the Boers.
March 21, the **first Parliament** of the **Transvaal** opens.
August 19, the Transvaal Parliament votes to buy the Cullinan diamond and present it to King Edward as a testimonial.
1908. January 31, Dr. L. S. Jameson resigns as premier of Cape Colony and is succeeded by J. X. Merriman. June 23, the Transvaal Parliament passes a resolution favoring the union of the South African Colonies. October 12, delegates meet at Durban, South Africa, to draft the Constitution for a South African Union.
1909. Natal, on June 12, decides to join South African Union.

ASCENSION.

Ascension, a volcanic island, recently fortified, area 35 square miles, in 1907 population 120, is situated in the South Atlantic, 820 miles northwest of St. Helena. It is famous for its large sea turtles, many weighing more than 500 pounds being captured annually.

ST. HELENA.

St. Helena area 47 square miles, in 1906 population 3,526, is a volcanic island, in the South Atlantic, distant about 1,200 miles from Africa and 820 miles from Ascension Island, the nearest land. It is memorable as the place of exile of Napoleon from 1815 until his death May 5, 1821. Five thousand Boer prisoners of war were confined here in 1900.

TRISTAN DA CUNHA.

Tristan da Cunha is a group of small islands in the South Atlantic, midway between Africa and South America. A garrison was maintained here until the death of Napoleon at St. Helena. They had 75 inhabitants in 1903. They are without government, being left entirely to themselves, except that a British ship visits the group once a year.

MAURITIUS.

Mauritius, or the Isle of France, area 705 square miles, population about 400,000, is an island in the Indian Ocean, 530 miles east of Madagascar. Discovered by the Portuguese in 1508, it passed under the Dutch in 1598, who called it Mauritius in honor of Maurice of Nassau. The French held it for nearly a century, losing it to the British in 1810. Bernardin de Saint-Pierre's *Paul et Virginie* is located here. It is a colony with representative government under a British governor, assisted by councils. The Chinese and East Indians are rapidly gaining control of the agricultural and business interests. Sugar, aloe fiber, molasses, coconut oil and vanilla are the chief exports.

THE SEYCHELLES.

The Seychelles are a group of about 90 islands northeast of Madagascar. First settled by the French, Great Britain has held them since 1794. The area is about 150 square miles and the population in 1906 was 21,781. Formerly dependent on Mauritius, since 1888 they have constituted a separate administration under a governor and council. They are well supplied with schools, and local examinations are held for Cambridge.

BRITISH COLONIES AND POSSESSIONS IN THE PACIFIC.

COMMONWEALTH OF AUSTRALIA.

The continent of Australia became known to Europe early in the seventeenth century. Vague traditions exist of an earlier exploration. The authentic discovery of the country was made by the captain of the Dutch ship *Duyfhen* in 1696. In 1770 the great navigator, Captain James Cook, landed on the southeast coast, gave many names to the locality, hoisted the British flag at Port Jackson and the country was accepted as a British Possession. After the American colonies obtained independence, Great Britain could no longer deport her criminals and convicts to America. In consequence in 1788 a penal settlement was established at Botany Bay. Other such settlements were started at Sydney and elsewhere. Opportunities for sheep farming and the natural advantages of the country attracted many other settlers, who bitterly resented the importation of felons. Their resistance was effectual. Few convicts were sent out after 1837 and none after 1867. The sentiment for autonomy grew strong during the administration of Sir Thomas Brisbane and Sir Ralph Darling. The discovery of gold in 1851 was followed by a great influx of population. The colonies of Australia developed into flourishing states. Many details of civil society were worked out in the most satisfactory manner. This is specially true of the suffrage, the method of voting and the government guaranties of land titles. The Australian ballot commended itself in Europe and America and has been adopted by many progressive nations.

The **Commonwealth of Australia** was proclaimed by Queen Victoria on September 17, 1900. It was inaugurated at Sydney, with imposing ceremonies,

MODES OF TRAVEL.

1. Ascent of the Andes. Republic of Colombia.
2. Ski Runner. From a drawing in the Norwegian edition of "*Farthest North*," *by Fridtjof Nansen.*
3. Eskimo Dog Sled. From photograph furnished by V. Garde.
4. Eskimo Kayak. Mock Suns. Photograph furnished by V. Garde.
5. Reindeer Caravan. Amur River, Eastern Siberia.
6. Yak Caravan. Tibetan Highlands. Photo by Henri, Prince d'Orléans.
7. Llama Porters. Village of Palca, Peru.
8. Russian Tarantas.
9. Siberian Tarantas. Driven by Mongols and Mongol Khalkhas, Thian Shan (Mountains); after N. Przhevalski.
10. Mail Carrier. Indo-China.
11. Japanese Transport of Goods.
12. Japanese Jinrikisha.
13. Cochin-China Buffalo Wagon.
14. Indian Buffalo. Taken near Bombay.
15. Teke Turkomans. Merv, Central Asia.
16. Mongol on Dromedary. With Prayer Wheel in his hands. Tibetan Frontier.
17. Camel with Atatich (covered saddle for women). From photograph furnished by M. Zeys, in charge of a Mission sent out by the French Minister of Public Instruction.
18. Elephant with Howdah (canopied seat on back). Bangkok, Siam.
19. Trekking in the Transvaal. Boer traveling by ox team.
20. Pampas Wagon. La Plata River, South America.
21. Sicilian Charrette.
22. Interurban Trolley Car.

MODES OF TRAVEL OF SAVAGE, BARBA

, SEMI-CIVILIZED, AND CIVILIZED MAN.

Copyright by G. & C. Merriam Co.
Registered at Stationers' Hall, London, England

on January 1, 1901, the first day of the twentieth century. For the inauguration Queen Victoria, whose eventful reign was to close a few days later, sent a peculiarly sympathetic message. The Australian process of federation was similar to that of the United States, and was reached only after much opposition and long discussion.

The Commonwealth is composed of the five continental states of New South Wales, Victoria, Queensland, South Australia, Western Australia, and the insular state of Tasmania. Each state has its own local government, presided over by a governor appointed by the crown who is assisted by a council of Ministers. Each has an upper and lower legislative house. In each state every citizen, man or woman, is entitled to vote, unless disqualified.

Government. By the constitution, approved by popular vote of each state and by the British Parliament, legislative power is exercised by a Federal Parliament, consisting of the King, of a Senate and a House of Representatives. The King is represented by a Governor-General, appointed by the crown and assisted in his executive functions by a Council of the State Ministers. These ministers in 1908 were: Minister of External Affairs; Attorney-General; Minister of Trade and Customs; Treasurer; Postmaster-General; Minister of Defense; Minister of Home Affairs; Vice President of the Executive Council, and an Honorary Minister. The Senate is composed of 6 senators from each state, elected for 6 years, one half retiring every 3 years. The House is as nearly as possible twice as numerous as the Senate, and the members are chosen for three years by universal adult suffrage, the number from each state being proportioned to its population save that no state shall ever be represented by less than five. The legislative powers of the Parliament are ample.

Industry and Labor. Agriculture, cattle and sheep raising, dairy farming and mining are the chief occupations. In 1906 wool valued at £22,648,769, gold £14,807,158, butter £3,283,304, copper £3,042,757, skins and hides £2,718,917 were exported. Next came flour, tin, mutton, timber, coal, tallow and lead.

Religion. There is no state church. The Church of England leads in number of communicants. Then come Roman Catholics, Methodists, Presbyterians, Lutherans and Baptists in the order named.

Education. Great and increasing attention is paid to education. In 1906 there were 7,351 public and 2,067 private schools. Elementary education is free and compulsory, though the latter feature is not everywhere strictly enforced. Secondary and superior education is largely denominational. The University of Sydney, the Technical College with its many branches, the Melbourne University, an examining and teaching body, the University of Adelaide, and several professional and special institutions, offer many advanced branches.

Defense. The protection of Australia essentially devolves upon the home government, though the federal parliament possesses certain constitutional powers as to defense. While the Australian has developed courage and endurance to a remarkable degree, he has had little of that experience which rendered the early colonist in America a soldier and marksman. Though there is an increasing agitation for a trained and efficient militia, as yet very little has been done. Some of the coast cities are defended by fortifications. Sydney is the headquarters of the British fleet in the South Pacific and opportunities are afforded for naval drill.

The area is 2,974,581 square miles. The population in 1906 was 4,119,481.

NEW SOUTH WALES.

New South Wales was the earliest settled and is now the most populous of all the Australian States. Captain James Cook named many of its localities. In 1840 New Zealand was separated from it and organized as a separate colony. Responsible government was established in 1855. The general election of 1904 was the first in the state in which women were entitled to vote. The permanent capital of the commonwealth will be located in New South Wales. The state is entitled to 27 members in the Commonwealth House of Representatives. The area is 310,372 square miles. Population in 1908 was 1,582,619.

VICTORIA.

Victoria is the most southern and, in territory, the smallest of the continental states. Responsible government dates from 1855. It was permanently colonized in 1835, when Melbourne was founded. Ninety-seven per cent of the inhabitants above fifteen can read and write. It is entitled to 22 members in the House of Representatives of the Commonwealth. Melbourne, now a city of over 550,000 inhabitants, is the temporary capital of the Federation. The area is 87,884 square miles, little more than one thirty-third of all Australia. The population in 1907 was 1,258,140

QUEENSLAND.

Queensland is the most northeasterly of the states. It was colonized in 1825 and separated from New South Wales in 1859. Responsible government was conferred in 1855. Literacy is high, ninety-eight per cent of the population above 15 years of age being able to read and write. It is entitled to 9 members in the House of Representatives of the Commonwealth. The area is 670,500 square miles. The population in 1907 was 546,467.

SOUTH AUSTRALIA.

South Australia occupies the center of the continent, which it spans from north to south. It was made a British province in 1836. Women were granted the franchise in 1894. A large part of the interior is occupied by the almost limitless Austral Plain. It is entitled to 7 members in the House of Representatives of the Commonwealth. The area is 903,690 square miles. The population in 1907 was 392,431.

WESTERN AUSTRALIA.

It occupies all the western part of the continent. The first settlement was planted on the Swan River in 1829. Responsible government was granted in 1890. This was the last of the states to join the Federation. It has 5 members in the House of Representatives. There are about six times as many inhabitants as twenty years ago. The area is 975,920 square miles. The population in 1908 was 270,777.

TASMANIA.

Tasmania is separated from Australia by Bass Strait, about 150 miles in width. In 1642 it was discovered by the Dutch navigator Tasman, whose name it bears. He however called it Van Diemen's Land, in honor of Van Diemen, then the Dutch governor of Java, and claimed the island for the Stadtholder of Holland. The Frenchman Marion visited the island in 1772 and provoked the natives to hostility. Five years afterward Captain Cook anchored in Adventure Bay. Then came a brief contest among representatives of different European powers for the right of dominion. Captain Bass circumnavigated the island in 1798. Because of his favorable description, the site of Hobart Town was afterward chosen.

Thus far Europeans had made no permanent settlement. In 1803 Lieutenant Bowen planted a colony on the Derwent. In the following year Port Dalrymple was settled. Then a penal colony was established at Port Philip. Captain Collins founded Hobart Town in 1804. The natives were constantly hostile, but were brought to subjection in 1830, after which the aboriginal race rapidly dwindled. The last native man died in 1862, one native woman survived ten years longer.

Tasmania was a dependency of New South Wales until 1825. Then the inhabitants declared themselves independent and sought to establish a civil government of their own. Next they successfully resisted the further importation of criminals, which ceased in 1853. In 1856 responsible government was granted. Tasmania now has 5 members in the House of Representatives.

The island is rich in metallic ores and coal. The main crops are oats, wheat, potatoes and hay. A relatively large State debt has been contracted for public improvements. The area is 26,385 square miles. The population in 1901 was 172,475.

1579. **Admiral Francis Drake** makes his way into the island group north of Australia.

1606. **Captain Dirk Hartog** in the ship *Duyfhen*, sailing from Bantam, reaches Carpentaria, and makes **authentic discovery of Australia.** On May 1, De Quiros discovers the New Hebrides; and in September, Torres passes the strait which bears his name.

1642. **Abel Janssen Tasman** and Jerit Zanzoon discover the island to which the name of **Van Diemen's Land** (afterwards Tasmania) is given, and on December 8, Tasman reaches New Zealand, anchoring in Golden Bay.

1644. Tasman circumnavigates the northern and northwestern coast of Australia, to which he gives the name of New Holland

1688. **Captain Dampier** explores the islands of the Buccaneer's Archipelago, and in the following year anchors in Shark Bay.

1705. Van Delft traces the north coast of Australia and completes the discoveries of the Dutch on the continent.

1770. Between April 19 and August 21, Captain Cook explores the Australian coast, anchoring at Botany Bay, discovering Port Jackson and Moreton Bay, and taking possession of New South Wales.

1772. The French navigator **Marion du Fresne** anchors on the coast of Tasmania; he afterwards provokes the natives of New Zealand, and is killed by them.

1783. **First project** proposed in the British Parliament for the **colonization of New South Wales.**

1786. A fleet is equipped under the direction of the British ministry with a view to planting an Australian colony.

1787. Captain Phillip is commissioned as governor of New South Wales.

1788. Phillip, in the ship *Supply*, reaches Botany Bay. On February 7, the **colony of New South Wales** is formally **proclaimed.**

1790. Australia is circumnavigated by Lieutenant Ball.

1791. **Whaling and sealing** begin in the Australian waters, being the first form of colonial and commercial industry.

1793. The **first free settlers** from England are established in the colony at Liberty Plains, near Sydney

1794–1801. In this period the practice of **sending political offenders to New South Wales** begins.

1795. The **first printing press** in Australia is put into operation in Sydney.

1798. The foundation of St. Philip's is laid.

1800. The coast of **Victoria** is traced by Captain Grant. The European population at this date is estimated at 6,508.

1803. The Sydney *Gazette*, the **first newspaper** in Australia, is established. The first European settlement in **Tasmania** is made at Risdon by Lieutenant Bowen.

1804. **Hobart Town** is founded by Colonel Collins, February 20.
The convicts at Toongabbie, in New South Wales, rebel and are with difficulty suppressed. A penal establishment is made at Newcastle, and another of the same character at Georgetown, Tasmania.

1807. The **first parcel of wool** is exported from Australia to England; a great trunk road is begun from Hobart to Launceston.

1808. A military rebellion occurs in New South Wales.

1810. The **first post office** in Australia is opened at Sydney; the European population in Australia is estimated at 11,590.

1820. The import duty on wool is removed by the British Government; merino sheep are introduced into Tasmania.

1822. The **exploration of the Australian coast** from Cape Arnhem to Cape Leeuwin is completed by Captain King.

1823. A discovery of gold is made in the Fish River, eighteen miles from Bathurst, New South Wales.

1824. New South Wales becomes a crown colony of Great Britain; a penal settlement is made on Moreton Bay, and another on Melville Island.

1825. Tasmania is declared to be independent of New South Wales, and a legislature is constituted.

1829. Statistics of the continent show a population of 35,610 Europeans; also sheep, 290,158, and cattle, 102,939.

1833. **New South Wales petitions** the Home Government for the establishment of **representative institutions.**

1834. The colonization of South Australia is formally authorized.

1835. **Melbourne is founded** by a party of colonists under the leadership of J. P. Fawkner.

1836. South Australia is colonized at Kangaroo Island.
Sir John Franklin becomes governor of Tasmania.
Adelaide is founded by Colonel Light.

1839. The government of New South Wales is authorized to extend its jurisdiction over New Zealand.
1840. The **speculative inflation** on the basis of pastoral property known as the South Sea bubble bursts.
1841. The transportation of convicts to Tasmania is resumed on a large scale.
1842. The cities of Sydney and Melbourne are incorporated; the **grazing interests** of Australia are vastly extended.
1843. The constitution of New South Wales is formally proclaimed, and on August 1 the new parliament convenes.
1844. The explorer, **Charles Sturt,** starts on an expedition into the center of the continent.
1845. Sturt discovers Cooper's Creek in South Australia; in Western Australia great distress prevails on account of scarcity of supplies.
1846. Thomas Livingstone Mitchell, having left the Barwon River and discovering the rich pastoral country in Queensland, arrives at the Barcoo.
1848. The first company of government immigrants arrives at Moreton Bay, and settles at the place afterwards called Brisbane.
1849. A great **anti-transportation movement** begins in Sydney; the convicts on the ship *Randolph* are not permitted to land at Hobson's Bay.
1850. Gold is discovered at Clunes, in Victoria, by Hon. W. Campbell. **Representative institutions** are conceded by an imperial statute to **Victoria, South Australia,** and **Tasmania.** An anti-transportation league is formed in Sydney. In South Australia, 37,000 people petition for the abolition of the convict system.
1851. On February 12, E. Hargreaves finds an alluvial gold deposit at Lewis Ponds and Summerhill Creek in New South Wales. The news of the discovery spreads with great rapidity throughout the colonies, and soon to all the countries of the world. A constitution establishing the **representative system** is proclaimed in **New South Wales.**
In May, large gold deposits are reported by official investigation in New South Wales. On July 1, Victoria is proclaimed a separate colony; gold is discovered on Anderson's Creek in Victoria. Gold discoveries in various localities continue throughout the year. The population of Australia is estimated at 430,596.
1852. The **first direct steamer** from England arrives at **Melbourne.** The influx of adventurers in search of gold sets in. A hundred thousand immigrants arrive in Victoria. The price of flour rises to a thousand dollars a ton at the gold camps.
1853. The **transportation of convicts** to Tasmania is officially **ended.**
Convention meets to prepare a constitution for New South Wales.
1854. A rebellion of the gold diggers begins, and the Chinese are expelled from the Victoria mines.
1855. The constitutions of New South Wales and Victoria are approved by the imperial government.
1856. Van Diemen's Land receives the name of Tasmania. The **first parliament** under a responsible government assembles in **New South Wales,** and a like event occurs in Tasmania.
1857. Responsible government begins in **South Australia.**
1858. Gold is discovered in Queensland. Telegraphic communication is established connecting Sydney, Melbourne and Adelaide.
1860. John McDouall Stuart reaches the center of the continent. The great exploring expedition of **Burke** and **Wills** sets out from Melbourne.
1861. The leaders of the Burke and Wills expedition perish at Cooper's Creek, Queensland. The export of gold from Victoria for the decade reaches $500,000,000.
1865. The Kanakas of the Sandwich Islands are introduced to work on the sugar plantations of Queensland.
1868. The **transportation of convicts to Western Australia** and **to all Australasia finally ceases** by parliamentary enactment.
1869. Railway is opened from Melbourne to New South Wales.
1870. Representative institutions are established in **Western Australia.**
1871. The Australian census shows a population of 1,924,770.
1873. A system of **free education** is established in **Victoria.**
1875. State aid to religion is withdrawn in Victoria. A system of free secular education is established in Queensland.
1877. A **restriction** is laid on **Chinese immigration** in Queensland. A system of secular education is established in South Australia.
1879. Submarine cable is laid from Port Darwin, in North Australia, to Java.
1880. A system of **compulsory, secular education** is established in **New South Wales.** An international exposition is held at Melbourne.
1881. A new census shows a population of 2,742,550.
1883. New Guinea passes under the government of Queensland.
1884. A British protectorate is established over **New Guinea.**
Discoveries of silver are made in New South Wales.
1886. Boundary between British and German New Guinea defined by treaty.
1888. The **centennial of Australia** is celebrated at Sydney. The federal council begins a second session at Hobart. An international exhibition is held at Melbourne. New Guinea becomes a British province.
1889. The project of an Australian convention to consider the political interests of the continent is advocated by Sir Henry Parkes.
1890. The project of a federal convention is agitated in Melbourne, which is selected as the site of the proposed assembly. **Responsible government** is proclaimed in **Western Australia.** University of Tasmania established.
1891. The **national convention** sits at Sydney, March 2–April 9
1892. Free public education begins in **South Australia.**
1893. The federal council begins its fifth session at Hobart.
1894. An amendment to the constitution is adopted in **South Australia,** extending the **right of franchise to women.**
1895. Prime ministers of colonial governments of Australia hold a conference at Hobart. The population of Australia increases to 4,238,369. The **sheep industry** becomes one fourth of that of the whole world.
1896. The parliaments of New South Wales, Victoria, South Australia, Western Australia, and **Tasmania,** pass acts authorizing those colonies to take part in the forming of a **Federal Constitution** for Australia and Tasmania as a commonwealth.
1897. Under the above acts, each of the five colonies having chosen ten representatives to a **convention,** that body frames a trial constitution to be submitted to the five parliaments for suggestions.
1898. After prolonged sessions at Adelaide, Sydney, and Melbourne, the convention completes its work March 16, and submits a Federal Constitution to the popular vote of the five colonies. If three or more colonies accept, their parliaments may adopt addresses to the Queen, asking that the imperial parliament may sanction the new constitution.
1899. All the colonies except Western Australia accept, by plebiscite, the **Federal Constitution,** and their parliaments address the Queen asking the sanction of the British parliament to federation.
1900. British parliament approves the **Federal Constitution.** This constitution unites New South Wales, Queensland, South Australia, Tasmania, Victoria, and Western Australia into the **Commonwealth of Australia.** It goes into effect January 1, 1901.
1901. On January 1 the Earl of **Hopetoun** is inaugurated **governor-general of the new Commonwealth,** at Sydney, with splendid ceremonies; Edmund Barton becomes premier. The elections for the first federal parliament result in a secure majority for the government. The first federal parliament is opened May 9, by the Duke and Duchess of Cornwall and York (heir to the English throne) at Melbourne.
1902. Serious dissatisfaction is manifested with the relations between the Commonwealth and the individual states, because of tariff difficulties, increased expenditures incident to the new régime, etc. Earl of Hopetoun resigns as governor-general and is succeeded by Lord Tennyson, November 20. Hard times due to **an unprecedented drought** during seven years add to the difficulties. Since 1899 the loss in live stock has been $75,000,000.
1903. Lord Northcote becomes **governor-general,** succeeding Lord Tennyson, August 26. September 24, Sir Edmund Barton resigns the premiership of the Commonwealth, and is succeeded by Alfred Deakin.
1904. Parliament opens March 2, the governor-general declaring that the colony favors a preferential tariff. April 21, the government is defeated in the House on a labor bill. On April 26 Mr. Watson, leader of the labor party, becomes premier. He is defeated August 12, and is succeeded by Mr. Reid. In August **Dalgety,** New South Wales, is chosen as the federal capital.
1905. Parliament opens June 28. June 29, the government is defeated, and on July 5 a new cabinet is formed, with **Alfred Deakin as premier.** During the year much attention is given to formulating measures to further immigration and the taking over of state debts by the Commonwealth.
1908. February 21, the government of the Commonwealth invites the American battleship fleet to visit Australia.
April 28, a conference is held at Melbourne of all the State Premiers.
September 29, a military bill is introduced into parliament, providing for compulsory service or conscription.
1909. February 1, British steamship *Clan Ranald* is wrecked near Edithbury with loss of 47 lives.
June 2, new cabinet formed by Premier Deakin.
August 15–20, floods do great damage in Victoria.

PAPUA.

Papua, by act of the Australian parliament in 1905, was declared henceforth the name of the territory, formerly called British New Guinea. Situated on the other side of the island-studded Torres Strait at so short a distance from Australia, the political destiny of New Guinea vitally affected the inhabitants of Queensland and of all the Australian States. It is probably due to their energy and loyalty that any part of New Guinea is British to-day. Climate and soil present favorable conditions, but the productions are few. The government is that of a crown colony. The area, inclusive of some dependent groups of islands, is about 90,540 square miles; population about 350,000.

NEW ZEALAND.

The Dominion of New Zealand is the largest insular possession of Great Britain. It includes North Island, South Island, Stewart Island, and some dependent groups, with a total area of 104,751 square miles. In the interior mountain ranges rise to considerable heights. Some among them are still active volcanoes, many are extinct.

Tasman discovered New Zealand in 1642 and anchored in a bay of South Island near where the town of Nelson now stands. Captain Cook in North Island in 1769 proclaimed the sovereignty of Great Britain. He introduced swine and European vegetables. Settlements were made by Englishmen, and American whaling ships visited the islands. Friendly relations were cultivated with the natives, the Maoris, who were a brave and vigorous race, physically of fine form and mentally well endowed. In 1820 Honga Hika, the Maori king, visited England and was honored by George IV. Thirteen years later a British resident was appointed, and in 1838 Captain Hobson was made lieutenant governor. The New Zealand Company was chartered in 1839. Beginning with 1844 there were a number of fierce wars with the Maoris, who were subdued with difficulty. Constitutional government was established in 1852, the colony being divided into provinces, each governed by an elected superintendent and provincial council. This was succeeded by the parliamentary system in 1876.

Government. The legislative function is exercised by a governor and a general assembly, consisting of two Houses, namely, the Legislative Council and the House of Representatives. The former consists of 48 members, chosen for 7 years except that those appointed before September 17, 1891, hold office for life; the latter, of 80 members, 4 of them Maoris, elected by popular vote for three years. Women are entitled to the suffrage, but cannot be members of either house. In 1905 a little more than half of the population were voters. In no other country have experiments in state socialism and governmental participation in affairs of labor and capital been carried so far. New Zealand is solving problems for the world.

Industry and Labor. New Zealand is rich in agricultural, grazing and forest capacity. The lumber cut in 1905 was 336,470,930 feet. The wool clip in 1906 was 158,757,040 pounds. In 1906 the value of wool exported was £6,765,655; of frozen meat, £2,877,031; of gold, £2,270,904; of butter and cheese, £1,901,237; of hides and skins, £919,337.

Religion. The leading Christian communions are the Church of England, Presbyterian, Methodist, Roman Catholic, Baptist and Congregational.

Education holds a high place and is thoroughly systematized. Elementary, secondary, technical and special schools, both governmental and private, are numerous. Instruction is secular and free. All children between 7 and 14 must attend school. There were in 1907 four endowed colleges with 71 professors and 1,325 students. Over all is the University of New Zealand.

Defense. Batteries, torpedo boats and submarine mines protect the approaches to the principal ports. In 1907 the Volunteer Force was 18,237 men. There were also the permanent militia and the Royal New Zealand Engineers. The number of men liable to service was 160,000.

The entire area of the Dominion is 104,751 square miles. The population in 1906 was 888,578.

1814. New Zealand is proclaimed a dependency of New South Wales.
1822. During a native war Totara Point is captured from the Maoris by invading islanders.
1826. A formal attempt is made to colonize the island.
1841. First Legislative Council meets. Auckland becomes the capital.
1844. Fierce wars begin with Maoris; resistance continues till 1875.
1856. Gold is discovered at Otago.
1864. Wellington becomes the seat of government.
1889. An exhibition of industries is held.
1891. Graduated land tax imposed to cause subdivision of large estates.
1893. R. J. Seddon becomes prime minister. Elective franchise extended to women.
1894. Industrial arbitration act passed to do away with labor conflicts. Act passed authorizing compulsory expropriation of private estates, price to be determined by arbitration.
1898. Old age pension act passed.
1904. Preferential trade act passed to transfer trade to Great Britain.
1906. Sir Joseph Ward becomes prime minister on death of R. J. Seddon, premier since 1893. Opening of international exhibition at Christchurch.
1907. September 9, by royal proclamation the Colony of New Zealand becomes the DOMINION OF NEW ZEALAND.
1909. March 22, New Zealand offers to defray cost of a first-class battleship for British navy, which offer Great Britain accepts March 24.

FIJI.

THE Fiji group lies between 177° E. and 178° W. long., being thus at the antipodes from Greenwich. The area is about 7,400 square miles, and the population in 1906 was 125,085. The principal island, as well as the surrounding cluster, is of coral and volcanic origin. The surface is broken and mountainous; some of the peaks rise to the level of 5,000 feet above the sea. The climate is healthful; but several afflictions peculiar to the tropical regions are known, such as the disease called elephantiasis.

Until recently the native Fijians were the acknowledged type of the savagery of Oceania. Cannibalism flourished in the island to the middle of the nineteenth century. The people were organized into clans, each clan having its chief; the clans were aggregated into larger groups. The religion was a form of Shamanism. With the growing predominance of European institutions the Fijians yielded to foreign influence, and their religious usages and social customs have been greatly modified and improved.

Fiji was discovered by Tasman in 1642. For a long time the discovery was all; the island and the surrounding group remained under the domination of the natives. Western adventurers for a long time dreaded an approach to Fiji, fearing to be captured and devoured. Escaped convicts from Australia and fugitive sailors, however, — having nothing to lose and much to gain, — took the risk of settlement as early as 1804. During the first half of the century there was almost constant war among the natives; some of the tribes attacked others, and the inhabitants of the adjacent islands made descents on the coast. One expedition was made by the Tongans of the Friendly Islands, two hundred and fifty miles distant.

Under the lead of an able chieftain these assailants well-nigh secured control of Fiji. The king or overchief of the island was at this time pressed by the government of the United States, which presented a claim for $45,000 for injuries done to the American consul. In his distress the king Thakombeau became a Christian; but he found to his dismay that this ruse was of little avail. In 1858 he was induced to offer the sovereignty of the island to Great Britain. The latter country was asked to give the chieftain a large estate and to discharge the American claim. This measure was not for the time carried into effect. As Europeans became better acquainted with the character of the island new bodies of immigrants came. In 1874 the British government took possession, although the native king was retained in nominal authority.

Fiji is a crown colony of the British empire. The government extends over the more than 250 islands belonging to the group. The governor, who is appointed by the crown, is assisted in his duties by an executive council of five members. The laws are enacted by the legislative council, consisting of eighteen members. Christianity has been introduced by both Protestants and Catholics. Some progress has been made in public education. The instruction of native children is intrusted to Protestant and Catholic missionaries.

OTHER ISLANDS IN THE PACIFIC.

THERE is hardly a reef or atoll in the Pacific or Indian Ocean, over which some European power does not assert authority. A majority of the groups, comprising an indefinite number of islands and islets, mostly of coral formation and scattered over the face of the ocean, are under the government of Great Britain. Space is lacking to mention even their names.

The most familiar of these groups are the **Tonga** or **Friendly Islands** and **Pitcairn Island.** Germany, Great Britain and the United States had conflicting interests in the Tongas, but finally the other powers consented and a British protectorate was proclaimed in 1899. The native king was left on the throne but a British commissioner conducts the administration. The inhabitants numbered 22,011 in 1906. All are Christians, the great majority Wesleyan Methodists. A good deal of enterprise is shown, and exports and imports are rapidly increasing. The area is about 390 square miles. They were discovered by Tasman in 1642. **Pitcairn Island,** 25 degrees south of the equator and at the extreme east of Polynesia, by its isolation, attracted the nine mutineers of the *Bounty* in 1790. It was visited by no others until 1808, and then again in 1825. Its area is 2 square miles. The inhabitants in 1904 numbered 169, all descendants of the original settlers. They are an orderly and industrious community.

BRITISH COLONIES AND POSSESSIONS IN AMERICA.

CANADA.

THE DOMINION OF CANADA furnishes the finest example of the colonizing success and governing ability of Great Britain. In one respect at least the difficulty encountered by the home government in organizing the provinces of Canada and combining them into a federative system, under the crown as to central authority but free as to local affairs, was greater than in the case of Australia; for in the latter there was an open continent and no intrusion or confusion of other races. But Canada was preoccupied. The whole region reaching from Nova Scotia far into the interior was possessed and colonized by the French before Great Britain obtained a footing.

Upon this Gallic foundation the English system of government was laid. The strength of that system is shown in the fact that English institutions have fixed themselves with uniformity and assimilative power alike in old French Canada and in those parts colonized later by Great Britain herself.

Old Canada included the country between the Gulf of St. Lawrence and the lakes Superior and Huron; also the provinces of Nova Scotia, New Brunswick, and Newfoundland. The modern dominion of Canada embraces also the great region of the Northwest — Manitoba, Kewatin, Saskatchewan, Alberta, British Columbia, and the Northwest Territory. The total area, excluding the water surfaces, is 3,619,818 square miles, which is greater than that of the United States inclusive of Alaska and Hawaii. Nearly one half of this vast domain was, in 1869, regained by Great Britain from the Hudson's Bay Company by the payment of £300,000.

The French Jesuits and adventurers who first penetrated the valley of the St. Lawrence attempted to establish feudalism, as was done also in New Amsterdam and in Virginia. The experiment everywhere was unsuccessful. In no part of the New World did feudal institutions flourish or even take permanent root. Before the middle of the seventeenth century an order of nobility was planted on the St. Lawrence; and the shadow of this reminiscence did not pass away until 1854, when the feudal tenure was finally abolished by the legislature of Lower Canada.

In the latter half of the seventeenth century Quebec gained the ascendency over the two governments of Montreal and Three Rivers. The city of Quebec became the seat of administration for all three districts. The governing body at that period was composed of the governor, the bishop of Quebec, five associate judges, and the king's attorney. In 1690, the country was invaded by Sir William Phips, who, as sheriff of New England, led a force of English and Americans against the Canadians; but the attempted conquest was unsuccessful.

To this period also belong the discoveries and explorations of Robert de la Salle. By him the wooded and watery solitudes of Canada were traversed, and by him the problem of the Mississippi was solved. He formed great and rational plans of colonization and drew the attention of France to the possibilities of an empire in the New World.

Next came the readjustment of European conditions by the Treaty of Utrecht, in 1713. By this compact Hudson Bay, Newfoundland, and Nova Scotia were relinquished to Great Britain. The American possessions of France were restricted henceforth to the undefined valleys of the St. Lawrence and the Mississippi. The imperfect geographical knowledge of the parties to the treaty entailed on after times the boundary disputes out of which, forty-two years later, the intercolonial war of France and Great Britain took its rise. After a seven years' conflict, England was victorious. New France was conquered. Canada was transferred to Great Britain. The character of the population was not greatly changed, but the British flag was raised over the whole valley of the St. Lawrence.

At the time of the Treaty of Paris, by which France lost and Great Britain gained the colonial possessions in the St. Lawrence valley, the total population of the country was scarcely more than 65,000. The primitive manner of life still prevailed. The one supreme interest of the people was the fur trade. Hunters and trappers, most hardy and adventurous, still traversed the unbroken forests far into the interior. The great lakes furnished waterways to the unknown West, and also the suggestion of an easy commerce. Only a few vessels, however, had been built in Canadian shipyards. At that time the total export trade amounted annually to less than $600,000. The agricultural interest was overlooked as of no importance. But the transfer to England soon brought great changes in the social and industrial, as well as in the political, condition of the country. Within ten years of the Treaty of Paris the exports rose to $1,775,000, and an import trade amounting to $1,367,000 had been gained — almost wholly from the mother country.

At the outbreak of the American Revolution the authorities of the thirteen colonies solicited the Canadians to make common cause against the mother country; but the latter refused to break their allegiance. A disastrous campaign of invasion was conducted by Montgomery and Arnold in the winter of 1775; they were routed and the former was killed in the streets of Quebec. Henceforth during the great conflict with Great Britain, Canada was a refuge for the American loyalists, all of whom were welcomed and many of whom were given lands in Upper Canada.

Great Britain, after the treaty of 1783, excluded the ships of the United States from the Canadian ports. At the same time the colony was given the exclusive privilege of supplying the British West Indies with her principal exports. When the Jamaican planters complained of the restriction the law was at length reconsidered, and in 1822 the importation of wheat and lumber from the United States was conceded. From the beginning of her history the question of trade and of the economic laws by which trade is governed has been with Canada one of the leading elements of her public life.

When the independence of the Old Thirteen Colonies was secured, Canada remained for a brief period a royal government. In 1791, however, a constitution was granted conceding to the Canadians the right to establish a government of their own with an elective legislature. The old French colony was designated henceforth as Lower Canada. Upper Canada, on a purely British foundation, was constituted a separate province. A guarantee had been given to the French population of Quebec that their rights, both civil and religious, should be regarded. The French Canadians became so well satisfied with their political relations that the Revolution in France produced no rebellious agitation among the people on the lower St. Lawrence.

In the second war of the United States with England, the Canadian frontier became the scene of the principal hostilities. Severe battles were fought on the line of the Niagara, but the Americans did not succeed in deeply penetrating the country. In the period following the war there was great jealousy between Quebec and Ontario, growing out of a conflict of commercial and financial interests. The effort was made in 1822 to secure a union between Upper and Lower Canada; but this was not effected until 1841. The year 1850 may be noted as an important epoch in Canadian history. In that year the free-trade policy of Great Britain was extended to the colonies and the old restrictive navigation laws were finally abrogated. At the same time the coal beds of Vancouver and the gold deposits of British Columbia were discovered. The political organization of the first British province on the Pacific followed. The spirit of religious reform asserted itself in a well-conceived effort to do away with ecclesiastical endowments and other special interests with which the growing nation was hampered. In 1854 the reserved privileges of the Established clergy and the seignioral tenures in property were annulled, not only in Upper but also in Lower Canada. In the same year the Great Western Railway was undertaken — a work of the greatest importance in promoting the international relations and interests of Canada and the United States.

The advantages arising from the union of Upper and Lower Canada were such as to suggest a still further extension of the federation; and accordingly, in 1867, the British North American act was passed, by which all of the British continental provinces were brought into a single confederation under the name

of the Dominion of Canada. On this foundation Upper and Lower Canada, known in recent geography as Quebec and Ontario, were constituted one in imperial matters, and with these were joined in course of time Nova Scotia, New Brunswick, Prince Edward Island, Manitoba, and British Columbia. The laws and constitutional usages of Great Britain were declared to be the foundation principles of the state.

In 1869, the possessions of the Hudson Bay Company were purchased by Great Britain, and in 1870, what was then the vast territory of Manitoba became an independent province of the Dominion. In 1871, British Columbia was admitted as a member of the federation. In 1873, Prince Edward Island was admitted. Then, in 1882, came in rapid succession the organization of Assiniboia, Saskatchewan, Alberta, and Athabasca. The territorial organization was completed by an Order in Council, October 2, 1895. By this decree the remaining portions of the Northwest Territories were divided into four districts, to which were given the names Ungava, Franklin, Mackenzie, and Yukon. In 1905, Assiniboia, Saskatchewan, Alberta, and Athabasca were reorganized as the Provinces of Saskatchewan and Alberta and admitted to the Union, which now consists of nine provinces.

Out of the imperfect results of the census of 1901–02 may be gathered the evidences of the material development of the rising nation. At the time named, the lines of water navigation (canal, river, and lake) had increased to over 2,700 miles. The railways had extended to 21,518 miles. The summary includes the Canadian Pacific Railway, extending from Montreal to Vancouver, a distance of 2,906 miles. This great line of travel, skirting, as it were, the territory of the United States, may be regarded as international, since it is sought by Americans with little distinction as to their nationality. By this railway and by a Pacific steamship line, subsidized by the British and Dominion governments, one may go from Montreal to Yokohama in fourteen days. The Canadian canals are under government ownership. They comprise the Welland, the St. Lawrence, the Chamblay, the Ottawa, the Rideau, the St. Peter's, the Trent Valley, the Murray and a few other connections. The construction of these important waterways has cost about $60,000,000.

Of the 5,371,315 inhabitants of Canada, as given by the census of 1901–02, all but 13 per cent are native born. Of the remainder, 495,883 were British born; 127,899 were born in the United States; 31,231 in Russia; 27,300 in Germany; 17,043 in China; 7,944 in France. French is the vernacular of 1,649,371, and English of 3,721,944.

Government. The executive authority in the Dominion is vested in a Governor-General appointed by the crown. The Privy Council is composed of fourteen members, namely, a Premier, who is President of the Council; a Secretary of State; Minister of Trade and Commerce; Minister of Justice and Attorney-General; Minister of Marine and Fisheries; Minister of Railways and Canals; Minister of Militia and Defense; Minister of Finance; Postmaster-General and Minister of Labor; Minister of Agriculture; Minister of Public Works; Minister of Interior; Minister of Customs; Minister of Inland Revenue.

The legislative authority is vested in a parliament consisting of two branches, a Senate and a House of Commons. The 87 senators are nominated for life by the Governor-General. The 214 members of the House of Commons are elected by the people for five years. The principles and methods of legislation are virtually identical with those of the home government of Great Britain.

Each of the nine provinces of the Dominion has its own parliament and administration. The executive authority in each is vested in a lieutenant governor appointed by the Governor-General. In all local matters the autonomy of the provinces is complete.

Industry and Labor. Canada is, first of all, a country of agricultural industries. The farming pursuit is predominant. The industrial prosperity of the people turns especially on the fact of the free ownership of land and the disposition to occupy and till the soil. There are about half a million landowners in the Dominion, and the opportunity to have a holding and a home is open to all. In Quebec, the holdings are small, averaging less than ten acres each. In this province, however, the number of the old feudal properties is considerable, and these are generally more than 200 acres in extent.

The mineral resources of Canada are being rapidly developed, the value of the mineral output having increased fourfold in ten years. In all the maritime parts of the country the fisheries form a leading pursuit. On the product of the fisheries much of the trade of Canada is based. For two hundred years the fur trade has called forth the adventure of a large part of the frontier population. With the oncoming of the commercial age, the Canadian forest, with its limitless supply of timber, has contributed powerfully to the industrial prosperity of the Dominion. More recently the discovery of gold in large quantities in the Klondike region of Yukon has drawn the attention of all nations to that field of adventure and promise.

Education. In all the provinces there is provision for free instruction by public funds, of which 30 per cent are from the general government and 70 per cent from local taxation. The school attendance considerably exceeds 1,000,000 in a population of about 5,000,000. For the higher education there is ample provision by public and private institutions. Thirteen universities with 424 professors afford instruction to over 7,000 students.

Religion. All religions are tolerated in Canada, and none is preferred by the state. More than two fifths of the people are Roman Catholics. Then come Methodists, Presbyterians, Anglicans, Baptists, Lutherans and Congregationalists in the order stated. The Catholic Church has one cardinal, 7 archbishops, 23 bishops and about 1,500 priests; the Methodist Church has 1,950 ministers; the Presbyterians about 1,400; the Anglicans 2 archbishops, 19 bishops and about 1,000 clergy; and the Baptists about 500 ministers.

Defense. There are few fortifications along the Canadian frontier. The principal barrier on the side of the United States is afforded by the Great Lakes. Halifax in Nova Scotia and Esquimalt on Vancouver Island are very strongly fortified and garrisoned by Dominion troops. Halifax is the chief naval station of British North America and Esquimalt the naval station of the British Pacific squadron. Each possesses a deep harbor of great extent and is provided with all naval requirements including an immense dry dock The permanent military force of about 3,000 men performs garrison duty but especially furnishes military instruction for the Active Militia, a body of about 52,000 men. All males from 18 to 60 years of age are liable for service. There are numerous rifle clubs and cadet corps. There are no British troops in the Dominion, the Canadian Government having assumed responsibility for all measures of defense, both defraying the cost and furnishing all equipment except in heavy ordnance.

1534. **Jacques Cartier** ascends the **St. Lawrence**, and claims the country for the king of France.

1629. The countries of the St. Lawrence are secured for a brief period by **England**.

1632. In accordance with the treaty of St.-Germain-en-Laye, Canada **is receded to France.**

1641. Charles Raymbault traverses the country of the St. Lawrence and enters Lake Superior.

1663. The valley of the St. Lawrence is visited, February 5, with a disastrous earthquake, changing the character of the country, causing the disappearance of streams and entailing much loss of life.

1673. **Joliet and Marquette** cross the watershed between the lakes and the Mississippi and descend that river.

1678–1680. **Robert de la Salle** passes from Fort Frontenac to Lake Erie, Lake Huron, and Lake Michigan, and into the country of the Illinois. **Father Hennepin** (1680) explores the upper Mississippi.

1688. France occupies the country of the St. Lawrence by establishing military posts at Frontenac, Niagara, and Mackinaw.

1690. **Sir William Phips,** with an Anglo-American army, conducts **an expedition against Quebec;** but he is repelled by the French.

1713. In accordance with the Treaty of Utrecht, Hudson Bay, Newfoundland, and Nova Scotia, together with the country of the Five Nations, are relinquished by France to Great Britain The possessions of the former are limited to the valleys of the St. Lawrence and the Mississippi.

1755. The **French and Indian war** begins; the English colonists in America contend with the French colonists of Canada, assisted by the Indians, for the possession of the Ohio and St. Lawrence valleys.

1759. Quebec is captured by the English under General **James Wolfe.** The war results in the triumph of the combined forces of Great Britain and the American colonies over the French and Indians.

1763. According to the Treaty of Paris, in February, the **entire colonial possessions of France** in North America east of the Mississippi, except a small section on the Gulf of Mexico, are surrendered to **Great Britain.**

1775. The Canadians resist the solicitations of the Americans to join them in their rebellion against Great Britain. In December, the province of **Quebec is invaded** by a small force of Americans under **Montgomery and Arnold;** the city of Quebec is attacked, but the Americans are routed and Montgomery is killed.

1777. The **expedition of Burgoyne** against the American colonies is begun from Canada as a base of operations.

1791. An act is passed by which Lower Canada and Upper Canada are constituted the two divisions of the country. **A constitution is granted** by which popular government is established.

1812–1814. The Canadian frontier becomes the scene of hostilities in the war between the United States and Great Britain.

1815. Amicable relations are established between the two countries by the Treaty of Ghent.

1837. **A general rebellion** occurs in Canada, threatening the overthrow of the British authorities. A body of American insurgents take possession of Navy Island; but they are expelled, and their ship is sent over the Falls.

1838. The **Earl of Durham** is sent to Canada as governor-general with extraordinary powers. He attempts unsuccessfully to restore order, and is recalled in December, 1839. A mob in Montreal destroys the parliament house. The legislature retires to Toronto and afterwards to Quebec.

1840. An act is passed by Parliament **reuniting Upper and Lower Canada** under one government. The progressive development of the country begins from this event.

1841. **A peaceful revolution** is effected in the administration by which the Council becomes subordinate to the popular legislature.

1846. The Earl of Elgin becomes governor-general of the province.

1849. An act of **general amnesty** is passed by the assembly covering all previous political offenses.

1858. **Ottawa** is finally selected by the Queen as the **capital of Canada.**

1860. The Prince of Wales visits Canada and is enthusiastically received.

1865. The first session of the Canadian Parliament is opened in Ottawa. The union of the provinces proves to be a successful political experiment. **Canada assumes the national character.**

1866. The conquest of Canada is undertaken by the **Fenian societies** of the United States. On May 31 the invading forces reach Fort Erie, where they hold their ground for a single day, and then recede and are scattered.

1867. An act is passed for the union of Ontario, Quebec, Nova Scotia, and New Brunswick in a confederative government under the title of the **Dominion of Canada.**

1868. A second raid on Canada is undertaken by the Fenians of the United States, but is easily repelled.

1869. **Louis Riel,** a half-blood French Canadian, heads an insurrection in Manitoba; he is banished from the province for five years.

1870. The province of **Manitoba** is organized. A long series of disputes concerning the fisheries and the fishing rights of the Canadians and those of the United States begins.

1872. The **Earl of Dufferin** becomes governor-general of Canada.

1873. Prince Edward Island is admitted into the confederation.

1878. The **Marquis of Lorne** becomes governor-general of Canada.

1879. The Marquis of Lorne opens an industrial exhibition at Ottawa.

1882. The whole of the **Northwest Territories** comes under the control of British Canada; Assiniboia is organized; also Manitoba; also Saskatchewan; also Alberta; also Athabasca.

1885. A serious rebellion in Alberta and Saskatchewan is fomented by Louis Riel, who, after sixteen years, renews his hostilities. The insurrection is suppressed, and Riel is captured and hanged.

1886. The **controversy** relative to the **fisheries** becomes serious. The permits granted to American fishing vessels are refused at Canadian ports.

1887. An interprovincial conference, at which five provinces are represented, is held at Quebec to consider propositions for the amendment of the British North American Act of 1867. Resolutions are passed demanding that the act in question be revised in many important particulars.

1888. Lord Lansdowne, at the expiration of his term, retires from the office of governor-general, and is succeeded by **Lord Stanley** of Preston.

1889. Sir John Macdonald succeeds John Henry Pope as Minister of Railways and Canals. An act is passed by Parliament for the surrender of fugitive criminals to foreign states with or without treaty stipulations to that effect. The Senate of the United States having discarded the existing treaty stipulations, a continuation of the *modus vivendi* is proposed by the Liberals in Parliament, but is rejected by the Government.

1890. An act is passed by Parliament granting to the fishing vessels of the United States for the current year the privilege of entering any Canadian port on the Atlantic coast for the purpose of purchasing supplies and for the transshipment of fish or crews.

1891. **Sir John Macdonald,** Premier of the Canadian Government, dies June 6. A new ministry is formed under the leadership of **Senator J. J. C. Abbot.** The annual session of Parliament is greatly prolonged on account of the investigation of alleged frauds on the part of certain public officials, particularly those connected with the Department of Public Works.

1892. A general census, ordered the previous year, is completed; but owing to the incapacity of the officials the results of the statistical tables are exceedingly unsatisfactory.

1893. Sir John J. C. Abbot retires from the office of prime minister and is succeeded by **Sir John S. D. Thompson.** Lord Stanley of Preston, governor-general of the Dominion, having succeeded to the title of Earl of Derby, resigns from the office of governor-general, and is succeeded by the Right Honorable John C. H. Gordon, seventh **Earl of Aberdeen,** who assumes his duties in the Chamber of the provincial Parliament of Quebec, on September 18. Hon. **Wilfrid Laurier** continues as leader of the opposition.

1894. **A Colonial Trade Conference,** at which are present delegates from all the provinces of the Dominion and also from Australia and Cape Colony, is opened at Ottawa, June 28 — the purpose of the conference being to secure arrangements between Great Britain and her colonies for placing all trade within the empire on a more favorable basis. The system of government expenditures is severely criticized in Parliament by the leaders of the opposition. The premier, Sir John S. D. Thompson, dies December 12. He is succeeded in office by Hon. Mackenzie Bowell, transferred from the Department of Customs.

1895. The social and religious controversy relative to the public schools in Manitoba becomes more acute. By an Act of the Legislature in 1890 public support is withdrawn from all schools not free and unsectarian. The French Canadian party in the provincial government, and also in the Dominion Parliament, raises an outcry of injustice. The secular party, particularly in Ontario, begins a counter agitation. The controversy leads to a crisis which threatens the disruption of the Cabinet. Gains are made by the Liberal party in the elections of the year.

1896. Another Cabinet crisis results in the resignation of seven members and a reorganization of the whole under the premiership of **Sir Charles Tupper.** Failing to conduct the government successfully, Sir Charles appeals from Parliament to the country and is defeated by a majority of thirty. Hereupon the Liberal party comes into power, and the **Hon. Wilfrid Laurier** is made prime minister.

1897. The **educational controversy in Manitoba is settled** at a conference of the prime minister, Laurier, and the Protestant representative of Manitoba, who agree to an article of compromise. A petition is sent to the Pope, who dispatches Monseigneur Merry del Val as his delegate to report on the conditions in the troubled province.

A change in the policy of the Liberal party leads to **important tariff legislation** on the principle of **reciprocity;** an act is passed lowering the customs duties (after July 1, 1898) one fourth in favor of any nation making similar trade concessions to Canada.

1898. An agreement is made with the government of the United States that a joint commission shall be appointed for the consideration and settlement of all questions in dispute between the two countries.

The **Earl of Minto** becomes governor-general of Canada.

December 13, the new Victoria bridge is opened at Montreal.

1899. One thousand men sail to join British army in South Africa, Oct. 30.

1900. April 26, great fire in Hull and Ottawa. Loss, $15,000,000.

General elections, November 7. Existing administration is indorsed.

1901. The Duke of Cornwall and York lands at Quebec, September 16. He is welcomed throughout Canada with devoted loyalty. The Privy Council of England decides, November 22, that the Manitoba prohibition liquor law is constitutional. **A conspiracy** to overthrow the local government in the Northwest Territory and establish a republic with Dawson as its capital is discovered and frustrated.

1902. The **prohibition question,** in active discussion since 1892, is again prominent in Manitoba. A plebiscite, taken April 2, to determine the question of enforcing the strict prohibition law of 1900, results in a large adverse majority. Similar movements occur in Ontario. The general agitation, however, has resulted in a restricted liquor traffic. October 6, a submarine telegraph cable, 3,455 miles long, is completed from Vancouver to Fanning Island. It completes the Vancouver-Brisbane cable, 7,755 miles long.

1903. On April 16 a surtax of one third of the existing duty is ordered on goods from countries discriminating against Canada. It is aimed at Germany.

May 10, a great fire in Ottawa destroys hundreds of houses.

August 17–21, 500 delegates from chambers of commerce throughout the British empire meet at Montreal to discuss Imperial trade questions. They adopt a resolution recognizing the desirability of an Imperial commercial policy based on mutual benefits.

1904. $12,000,000 damage is done by a fire at Toronto on April 19.

In elections, November 3, the chief issues are the government backing of the **new transcontinental railroad** and a higher preferential tariff. The Liberals secure a majority of 70 in lower house. Election frauds are charged in Ontario. On Dec. 10 Earl Grey succeeds Lord Minto as governor-general.

1905. In Canada, a bill is passed, July 5, after much discussion, to admit on September 1 two new provinces, **Alberta and Saskatchewan,** from the Northwest Territories. The claims of conflicting religious parties are met by granting the privilege of limited religious instruction by sectarian teachers.

1906. January 16, the defenses of Halifax are taken over from the Imperial government.

March 8, Tenth Parliament of the Dominion of Canada is opened.

November 23, Canada notifies the United States that the existing postal convention will on May 7, 1907, be abrogated so far as it relates to second-class matter (periodicals, etc.).

1907. March 3, stringent laws against work, trade, and amusements on Sunday become in force in Canada.

October 17, the Marconi wireless telegraph station at Port Morien, Nova Scotia, is opened to commercial business.

September 7, serious rioting occurs at Vancouver, B. C., against Japanese and other Asiatics. Reparation is made to victims by Canada.

1908. January 1, Manitoba purchases the provincial telephone system for $3,300,000.

January 21, in Parliament the agreement is made public, regarding the exclusion of Asiatic contract laborers.

February 13, a shipload of Japanese and Indian laborers, imported on contract, is detained at Victoria.

April 1, the province of Alberta purchases the provincial telephone system for $675,000.

April 7, understanding is reached between the British government, Canada and India, restricting Indian immigration.

1908. July 23, celebration of the tercentenary of Quebec is opened. Informally beginning on the 19th, it continues for a week, the Prince of Wales, Vice President Fairbanks, Lord Roberts and other notables being present.

August 3, strike of eight thousand mechanics on Canadian Pacific Railroad.

In August furious forest fires, continuing several days, in British Columbia, destroy scores of people, and consume more than $5,000,000 of property.

October 26, Premier Laurier and the Liberals win decisively in elections.

1909. June 19, the Sault Ste. Marie canal locks are wrecked through the ramming of the lower gates by a steamer.

NEWFOUNDLAND.

NEWFOUNDLAND is nearer Europe than is any other land in America. It was discovered by John Cabot in 1497, though it may have been visited by the Northmen 500 years earlier. In 1583 Sir Humphrey Gilbert declared it a possession of Queen Elizabeth, and, though claimed by France, it has been held by England ever since. In 1869 the people of Newfoundland voted against union with Canada, preferring to continue as a distinct colony.

Responsible government has existed since 1885. The governor, appointed by the crown, is assisted by an Executive Council of not more than 9 members. Parliament consists of a Legislative Council of not more than 11 members and of an Assembly of 36 members. The Cabinet comprises a Premier and Colonial Secretary, and Ministers of Justice, Finance, Marine and Fisheries, and Agriculture and Mines. The fisheries furnish the chief industry. The forests are extensive and valuable. The mineral deposits include iron, coal, copper, silver, lead and gold. Religiously the population is divided almost equally between Roman Catholics, Anglicans and Methodists, while a few adhere to other communions. Schools and colleges are maintained by the leading religious bodies.

The area is 42,734 square miles. The population in 1906 was 228,755.

Labrador, lying farther east than any other part of the continent, is a dependency of Newfoundland. Its area is about 120,000 square miles, and population about 4,000.

1901. July 19, an arrangement is concluded with R. G. Reid, by which the government secures the railroads, telegraph lines, and lands acquired by him under the preceding administration.

1904. October 31, in elections Premier Bond and colleagues win decisively.

1905. February 3, the Reid Company is awarded $15,000,000 for loss of telegraph rights.

April 17, a bill passes, enforcing the bait act against American fishermen.

1906. October 8, a *modus vivendi* is signed by Great Britain and the United States as to the Newfoundland fisheries. Much dissatisfaction is manifested in Newfoundland.

1908. November 9, the general legislative election results in the choice of seventeen supporters of the Premier, Sir Robert Bond, and of eighteen supporters of Sir Edward Morris, leader of the opposition.

THE BERMUDAS.

THE BERMUDAS are a group of over 300 islands, area about 20 square miles, population about 20,000, in the Atlantic, 580 miles southeast of Cape Hatteras. They constitute a crown colony, and are exceedingly important, both as a strongly fortified station of the British fleet and because of their commanding strategic position. The permanent military force comprises an average of 3,000 men of all branches.

BRITISH HONDURAS.

BRITISH HONDURAS is the result of the endeavor of British logwood cutters to get the rich dyewood. By the treaty of 1763 it was agreed that Great Britain should remove her fortifications from the Bay of Honduras and that the Spaniards should allow the cutters to follow their craft. British settlements began to flourish. These the Spaniards attacked in 1779 and carried the inhabitants prisoners to Havana, where great numbers perished miserably. The survivors three years afterward were sent to Jamaica. This part of Central America was called His Majesty's Settlement in the Bay of Honduras. British sovereignty was established by defeat of the Spaniards in 1796. This occupancy was unacknowledged by the United States until 1850, when British Honduras was recognized as a British possession. It yields large quantities of mahogany and logwood. It is now a crown colony, with an area of 7,562 square miles and a population in 1906 of 41,007.

THE BRITISH WEST INDIES.

COLUMBUS on reaching Guanahani supposed he had found the Indies. History accepted the delusion, but defined the great archipelago, curving from Florida and Yucatan to South America, as the West Indies, in distinction from the East. The situation of the great group is geographically within the circuit of the Americas. But historically considered, the dependency of the West Indian islands until the end of the nineteenth century was wholly European. Viewed as a whole, the West Indies include thirty major islands and groups of islands. The chain, extending first northward, then westward, and then northwestward from Venezuela to Yucatan and Florida, is almost continental in its character and attractiveness. If the upheaval of this part of the Atlantic bed had been somewhat greater, the Caribbean Sea and the Gulf of Mexico would have been inclosed like the Caspian, and both the geography and the history of the New World would have presented a different aspect.

Among these islands the Spaniards coasted and colonized until no other part of the New World was so well known or so fully occupied by the white race. The easy conditions of the climate, the gentleness of the aborigines, the richness of the islands in mine and forest, and the ease with which the whole might be wrested from the native races, provoked the cupidity of the Spaniards and subsequently inflamed the covetousness of other nations, until with the vicissitudes of affairs in Europe, the West Indies settled into that form of political dependency which we find at the present day. Shortly after their discovery these islands were occupied almost exclusively by Spain. Then, as the Spanish monarchy declined, they gradually were detached from her empire. Cuba and Porto Rico were lost, last of all, as the result of war with the United States. Hardly a rock or islet now remains to Spain of her former imperial domain in the New World. Two of the West Indies, Cuba and Haiti, are become independent republics. Others are held by Denmark, France, Holland and the

United States. But by far the greater number have passed, some of them after many vicissitudes, into the possession of Great Britain.

The Bahamas are a group of about 30 inhabited and over 600 uninhabited islands southeast of Cuba. Guanahani, one of the Bahamas, was the first land discovered by Columbus in his first voyage, 1492. It was named by him San Salvador. The natives were exterminated by the Spaniards in less than a generation. The islands were without inhabitants for one hundred and fifty years until the arrival of English colonists in 1629. Then they were fought over until their final cession to Great Britain in 1783. Nassau, the capital on New Providence Island, has a fine harbor and was the headquarters of blockade runners during the civil war. The area of the group is 5,450 square miles. There were 59,142 inhabitants in 1907. Fruits and vegetables are exported, also shells, pearls and ambergris. There are sponge and turtle fisheries.

Jamaica, from its history, size, and relative situation, is the most important of the British West India Islands. It is one of the Greater Antilles, lying south of Cuba and west of Haiti. It was discovered by Columbus in May, 1494. Fifteen years later the first colony was planted by the Spaniards. Columbus called the island Santiago, but the name was soon replaced by the native "Jamaica," signifying the country of springs. The Spanish colony did not flourish and in the time of Cromwell Admiral Penn at the head of an English fleet wrested Jamaica from the Spaniards. The conquerors foolishly devastated the island and came near being victims of their own severity, but they were reinforced and the subsequent efforts of Spain to reconquer Jamaica proved abortive.

The possibilities of the island in the production of sugar soon became known. In 1673 the first pot of sugar was sent to England by the governor of the island. The slave trade furnished the means of developing the sugar industry. The slaves multiplied and became dangerous. Some escaped to the Blue Mountains, from which they could not easily be recaptured. At length they found a leader in their chieftain Cudjoe. The so-called "maroons" made a descent upon the plantations in 1715 and the horrors of a servile war ensued. Hostilities continued for twenty-three years, and at the end of that time, the authorities were glad to make peace with the insurgents by many concessions. The sugar industry increased in importance. During the first three quarters of the eighteenth century more than five hundred thousand slaves were imported. In 1795 the slaves revolted, but they were suppressed and their leaders sent to Sierra Leone. The slave trade was abolished in 1807. The island industries had reached a high state of prosperity. Nearly all the tropical productions abounded, and the trade between Jamaica and Great Britain was exceedingly lucrative.

The efforts of Wilberforce and other British reformers, for the abolition of slavery in all the British colonies, were crowned with success in 1834. At that time there were 322,000 slaves in the island. These were first raised to apprenticeship for four years, and then to freedom. The masters were indemnified with a payment of $28,362,000 by the British Parliament. The victory for humanity had been won, but the effect upon Jamaica and the other sugar-producing British West India Islands was disastrous.

In 1692 Port Royal, the old capital, was destroyed by earthquake and Kingston became the seat of government. Another earthquake destroyed the town of Savanna-la-mar in 1740. Dreadful hurricanes swept and almost denuded the island in 1712 and 1722. Cholera ravaged Jamaica in 1846 and some of the principal settlements lost the greater part of their inhabitants. A formidable negro insurrection in 1865 was put down by Governor Eyre with a strong hand. Well-meaning people in England criticized his severity. Others defended him vigorously, and he was officially exonerated. In 1907 an earthquake destroyed a great part of the town of Kingston and killed nearly 1,000 persons.

The island is ruled by a governor, assisted by a Privy Council and a Legislative Council of 29 members, 14 of whom are elected. Jamaica is divided into 15 parishes, in each of which an elected board administers local affairs. The government maintains elementary, secondary and industrial schools as well as colleges for training teachers. There is no state church. Anglicans, Baptists, Methodists, Presbyterians, Roman Catholics, Moravians, Congregationalists, are, as to numbers, in the order named. Sugar raising has become of inferior importance. A large amount of land is devoted to pasture and less to tillage. Kingston, the capital, has a very fine harbor and is strongly fortified. The area is 4,200 square miles. The population in 1907 was 830,261.

Dependent upon Jamaica are **Turks** and **Caicos Islands**, area 165 square miles, population 5,287, two southern groups of the Bahamas. Their chief industry is salt raking, 1,800,000 bushels being annually exported. The **Cayman Islands** also are attached to Jamaica. They export coconuts, rope, turtle shell and cattle.

Leeward Islands, so called from their supposed situation relative to the trade winds, are the northern half of the prolonged group known as the Lesser Antilles. The principal British islands are Dominica, Antigua, St. Kitts, Nevis, Anguilla, Montserrat, Barbuda and Redonda. The Virgin Islands are a part of the Leewards. They have one governor, appointed by the crown, and one Federal Legislative Council of 16 members, one half appointed and the other half elected. The entire area is about 700 square miles and the population, which tends to decrease, about 125,000. Less than 5 per cent are whites. Most of the schools are maintained by the various churches. Sugar, molasses, lime juice, cocoa and onions are articles of export.

The Windward Islands, so called from their supposed situation relative to the trade winds, are the southern half of the prolonged group known as the Lesser Antilles. The principal British islands are Grenada, St. Vincent and St. Lucia. In connection are the group of the Grenadines. All are under a governor, but otherwise each island conducts its own affairs. The entire area is about 520 square miles and the population about 160,000. In St. Lucia most of the schools are under Roman Catholic control, aided by government grant; in the other islands they are maintained by the government. Cocoa, nutmegs, spices, and cotton are the chief products.

Barbados, area 166 square miles, in 1906 population 196,287, is the most eastern of the West India Islands. Though geographically one of the Windwards, it is administratively a colony by itself, having its own governor assisted by a legislative council of 9 members, all appointed by the crown, and its own assembly of 24 members annually elected by the people. Most of the inhabitants belong to the Church of England. Sugar and cotton are the chief products. Also manjak, a kind of asphalt, is exported. Coral reefs almost surround the island. Violent hurricanes are frequent and destructive.

Trinidad, area 1,754 square miles, population 255,148, lies directly opposite the northern mouth of the Orinoco. Discovered by Columbus in 1498, it was held by Spain until its capture by Great Britain in 1797. Most of the inhabitants are of mixed race, descendants of Europeans and Africans. Three-fourths of the people are Christians, nearly one half of whom are Anglicans and the other half Roman Catholics. From the large asphalt lake, 115,875 tons of asphalt were exported in 1906. Dependent upon Trinidad is Tobago, area 114 square miles, population 18,750, a popular resort of American and British pleasure seekers. Trinidad is ruled by a governor, who is aided by an executive and a legislative council.

BRITISH GUIANA.

British Guiana is situated between Dutch Guiana, Brazil and Venezuela. It was taken from the Dutch in 1803. Dispute with Venezuela as to the boundary threatened complications with the United States in 1895. The matter was afterward settled by arbitration. Gold and diamond mining are carried on. Authority is in the hands of a British governor, who is assisted by an executive council and a Court of Policy.

The area is 90,277 square miles. There are about 290,000 inhabitants.

THE FALKLAND ISLANDS.

The Falkland Islands, area between 6,000 and 7,000 square miles, are a group of about 200 islands, situated in the south Atlantic, 250 miles northeast of Terra del Fuego, and constituting a crown colony. They were discovered in 1592 and have been claimed by the French, Spaniards and British. They have been held by the latter since 1833. Cattle and sheep raising furnish the chief occupation. The fox and mouse are native, but the other mammals have been introduced. Wild horses abound. Fish, seals, and sea elephants are numerous.

GREECE.

The country which we think of as Greece had no existence as a state during the Middle Ages. The Eastern Roman or Byzantine Empire included the territory of ancient Greece, which was divided up into provinces of various names. But that Empire was so Grecianized that it is commonly spoken of as the Greek Empire, and the real Greek center was Constantinople.

Constantinople was captured by the Ottoman Turks in 1453 and in a few years they had conquered all the provinces. For hundreds of years the subjected Greeks were the victims of an arbitrary, Asiatic despotism. By giving up their religion, they could have secured the favor of their masters and been admitted by them to full equality. Instead they clung to their ancient church with devotion and entire disregard of worldly advantage. The antipathy between the governors and the governed was profound. Nevertheless, because of their recognized ability and enterprise, many leading Greeks were called into service by the Sultan in time of need and were employed in political, educational and commercial functions. Greek merchants and sailors showed the same qualities as their ancestors. In the Levant and in some of the great cities of western Europe, they established commercial houses through which trade between the East and West was maintained. A taste for Greek learning and Greek art had revived in western Christendom and, though the Greeks were suffering all manner of oppression, they retained a measure of their old independent purpose and spirit.

In the latter half of the eighteenth century, signs of reviving nationality were seen everywhere among them. The intellectuality of the race began to assert itself with new vigor. Secret societies called Hetæriæ were founded, which aimed at political liberty. Though membership if discovered would mean death, these societies became numerous. Through such literary vehicles as the Greeks possessed, the spirit of independence found expression. What few writers there were inflamed the people by appealing to glorious memories and by reciting in popular songs the exploits of the Klepts. These Klepts were Greeks who led a wild, lawless life in the mountains, and were often brigands, but fired the popular imagination because they preferred any hardship to being slaves of the Turks. Insurrections broke out here and there in desultory fashion and without connection. Ali Pasha of Janina, Markos Bozzaris and his Suliotes, the insurgents in Crete, were all giving trouble to the Turks. In March, 1821, in the Danubian provinces Alexander Ypsilanti at the head of the Hetærists proclaimed the independence of the Greeks, but he and his little army were either captured or slain at the battle of Dragatzana.

The Greek Revolution really dates from Annunciation Sunday, April 6, 1821, when all Peloponnesus burst into flame, and Germanos, Archbishop of Patras, blessed the insurrection. Then followed six horrible years. The Turks, themselves unable to put down the revolution, called in the Egyptians. The atrocities committed by the latter aroused Europe. Russia, France and Great Britain ordered an immediate armistice. Then followed the battle of Navarino, in which the allied British, French and Russian squadrons destroyed the Turkish and Egyptian fleets. Russia declared war against Turkey. Nine years after the war for independence began, Turkey acknowledged Greece as an independent state. But the reconstituted state did not include more than half the territory over which the patriots had fought for freedom. By decision of the European powers most of the islands and all northern Greece were handed back to the Sultan. The powers also allowed the Greeks no voice in choice of ruler or of form of government, but decided all matters for them and appointed Prince Otho of Bavaria, a youth of seventeen, to be their king. For some years the government was administered from Nauplia, but eventually Athens was made the capital.

Otho ruled in an arbitrary manner and without constitutional restrictions for eleven years. Then the people by a peaceful revolution extorted from him assent to a constitution. A national assembly was called and in 1844 Greece entered upon her career as a self-governing, constitutional monarchy. But society was in a disturbed condition. Politics kept Athens and the country in constant ferment. The representatives of the foreign powers continually interfered in even local affairs greatly to the detriment of the public welfare. In the Crimean war the Greek government wished to take sides with Russia as against the allies, but it was soon forced to recede from this position.

In the meantime popular discontent with the king and his administration so increased that another revolution broke out and the sovereign was formally deposed by the national assembly. Otho embarked on an English ship for Germany. After an interregnum of some months the powers selected Prince Christian Wilhelm, whose father was afterward king of Denmark, as Christian IX. He ascended the throne in 1862 as George I. and is still reigning.

During the last half century Greece has enjoyed good government, and has made progress in every respect. It has been a period of tranquillity save as the intense sympathy of the Greeks for their brethren still under the Turkish yoke

has brought them into complications and especially into the disastrous Greco-Turkish war of 1897. Panhellenism is still the dream of the nation.

Government. The government of Greece is designated as the Kingdom of the Hellenes. It is a limited constitutional monarchy. The present constitution dates from 1864. The executive authority is vested in the king, whose selection by the powers was ratified by the National Assembly at Athens on March 18, 1863. The legislative authority differs from that in most other European states in being vested in a single chamber, called the Boule. This consists of two hundred and thirty-five representatives elected by the people for a term of four years. The legislative body is carefully guarded in its constitution. The members must be at least thirty years of age, and it requires a preliminary vote of at least one thirtieth of the electors to put a candidate in nomination for the Boule. The Boule convenes annually, and must remain in session for at least three months. The power of revising the constitution in certain of its provisions is conceded to the legislative assembly in decennial periods. The executive branch, that is, the king, is assisted by a ministry of seven members, as follows: President of the Council and Minister of Finance; Minister of the Interior; Foreign Affairs; Justice; Marine; War; Worship and Instruction.

Industry and Labor. Modern Greece has essentially the same climatic, industrial, and commercial conditions as had the great Greece of antiquity. The country is fundamentally an agricultural and commercial state. More than one half of the area has a productive soil. The natural fertility is greatly enhanced by the genial climate, which has been immemorially famous as one of the most temperate, pleasant and healthful in the world. The mild climatic condition is combined with a bracing and invigorating atmospheric influence which contributes to the cheerful and active disposition of the people.

Three things are most strongly suggested by the Hellenic environment: cultivation of the soil, commerce and art. The most important productions are olives and currants. A large part of the world's currant supply is from the gardens of Greece. The olive and fig orchards are known from antiquity. The leading productions are: tobacco, figs, lemons, and all the citrous fruits The wine product has been affected by disease in the vines. The cereals of the north temperate zone are produced to perfection; but the territory is too narrow for abundance. The raising of live stock, such as sheep and goats, is one of the leading pursuits. The cultivation of silkworms has been an important industry since the introduction of the insect into Europe. The native woods are still important. The oak, particularly the Dodonian oak of the western coast, has been famous as one of the strongest and heaviest timbers known to commerce. Fishing and mining are also important features of the industrial life. The lead mines of Attica still yield abundantly. The production of salt is more than fifty million pounds annually.

The broken character of the surface of Greece tends to the segregation of the industrial communities; but modern methods of intercourse have overcome to a great extent this drawback, and the commerce of the Greeks shows a large import and export trade.

The general condition of labor in Greece is more prosperous than that of the surrounding regions. The variety of industry gives life to the different communities, and the promotion of education by the government has diffused intelligence. The situation of Greece as a commercial country brings a large portion of the people into contact with the sea, and the commercial reaction upon public intelligence is favorable to national development. Industry is at a lower stage in the interior.

Religion. The great majority of the people belong to the Greek Orthodox Church. This fact makes the pressure of the Ottoman power so odious to the people. The head of the Greek church is the Patriarch of Constantinople. This relation, however, is nominal. The actual ecclesiastical administration within the kingdom is vested in a council called the Holy Synod, which consists of the Metropolitan of Athens and four archbishops and bishops. The other high officers of the church are twenty-one archbishops and twenty-nine bishops distributed in four sections of the country; namely, Northern Greece, the Peloponnesus, the Archipelago, and the Ionian Islands. The other Christians chiefly Roman Catholics, number about 15,000. The Mohammedans are estimated at 24,000 and the Jews at nearly 6,000. Though the Greek Orthodox faith is recognized as the religion of the state, complete toleration is guaranteed by the constitution.

Education. The system of instruction provides for the free and compulsory education of all children between the ages of five and twelve years; but, as in many countries, the compulsory provision is not well enforced. The educational system is well organized, having the University of Athens at the head, 348 secondary schools related thereto, and 3,263 primary schools related to the secondary. There are also a considerable number of agricultural, commercial, and special institutions of learning. The University of Athens with 105 instructors and 2,574 students holds a reputable rank among the European institutions of the higher learning.

Defense. The military system is in a state of transition. Service is obligatory and universal and lasts no less than 30 years. The soldier serves two years in the active army, ten years in the active reserve, eight years in the territorial army and ten years in the reserve. There are numerous exemptions. On a peace footing the force is about 29,000 men of all ranks. The navy consists of three small battleships. Eight fast destroyers were ordered in 1906. There are some obsolete torpedo boats and other craft.

The area is 25,014 square miles. The population according to the last census was 2,631,952.

1821. A revolution against the Ottoman rule begins in Greece. In March the insurrection is headed by Alexander Ypsilanti at Jassy in Moldavia. In June he is overwhelmed by the forces of the Sultan. The forces of Georgakis are destroyed and the rebellion in the North is quelled. In March the revolution begins in the Morea, where the patriots are successful under Germanos, Colocotrones, Demetrius, Ypsilanti, Mavromichalis, Bozzaris, Odysseus, and Mavrocordatos. A rising in the Archipelago is successful, and Tripolitza is stormed by the insurgents, in October.

1822. A national assembly is convened by the patriots, and in January the independence of Greece is proclaimed at Epidaurus. The Turks massacre the inhabitants of Scio. In June the Greek revolutionists storm the Acropolis at Athens, but they are routed at Peta in the following month. The Turks are vanquished in the Morea.

1823. In August, **Markos Bozzaris,** the Suliote leader, makes an attack on the Turkish camp at Karpenisi, but is slain.

1824. Lord Byron, who has embraced the cause of the Greeks, dies at Missolonghi, April 19. An Egyptian force sails to the aid of the Sultan, under **Ibrahim Pasha,** but Miaulis thwarts the movement.

1825. Ibrahim Pasha makes a victorious campaign in the Morea.

1826. In spite of a valiant resistance by the Greeks, Missolonghi falls, in April, and the Turks, after occupying Athens, besiege the Acropolis, in August. The patriot government thereupon withdraws to Ægina.

1827. In June the Greek defenders of the Acropolis capitulate. On July 6, England, France, and Russia make a treaty at London for the pacification of Greece. On October 20, the **fleets of the powers** destroy the Turkish and Egyptian ships at **Navarino.** Capo d' Istria is elected president of the provisional government of the revolutionists.

1828. Capo d' Istria assumes the administration of the Greek government. French troops enter the Morea and Ibrahim Pasha retires. Russia begins a war against Turkey. (See RUSSIA.)

1829. The revolution in Greece ends with the success of the patriots.

1830. In February, the London protocol of the powers declares Greece **an independent kingdom.** The decree is accepted by Turkey.

1832. The powers unite in electing **Otho,** a son of Louis I. of **Bavaria,** to the throne of Greece; in the following year he reaches the country.

1835. King Otho attains his majority, and the regency is dissolved.

1843. The people of Athens rise, and Otho promises to promulgate a **constitution.** This promise is fulfilled in the following year.

1850. The government of Greece agrees to pay indemnity for losses sustained by subjects of Great Britain, known as the **Don Pacifico claims,** but the promise is made only after the appearance of English warships before Athens.

1862. In October, a revolution occurs in Greece, and **King Otho is deposed** from the throne. In March, the crown is offered to Christian William, son of Prince Christian of Sonderburg-Glücksburg. He accepts the sovereignty and ascends the throne as **George I.**

1864. A treaty is concluded with Great Britain, on October 31, by which the **Ionian Islands** are annexed to the kingdom of Greece.

1866. The relations with Turkey are strained to the point of rupture on account of the assistance given by the Greeks to the **Cretans,** in revolt against the Ottoman authority.

1877. The outbreak of the **Turco-Russian War** creates intense excitement throughout Greece. The populace of Athens rises and demands a declaration of hostilities. The government maintains its neutral attitude and denies the reported alliance with Russia.

1878. The proposition of the Congress of Berlin to rectify the frontier line of Greece excites great hopes among the people. These hopes, however, are disappointed by the subsequent action of the Congress, and the Sultan's circular denying the reported project of rectifying the Greek boundary produces a feeling of anger and depression.

1879. The Turco-Grecian Commission, appointed by the Congress of Berlin to **rectify the boundary** between Turkey and Greece, assembles in January. The sittings continue until November.

1881. In May, Turkey formally consents to the annexation of a large tract in **Epirus and Thessaly** to Greece.

1883. The financial condition of the government becomes so much involved that the Chamber of Deputies orders a loan of $38,000,000.

1885. The Roumelian revolution disturbs the financial scheme of the Greek government and leads to the mobilization of the army and navy.

1886. The difficulties between Turkey and Greece become acute; Greece threatens to declare war; the powers mediate to prevent a conflict.

1888. The Macedonian disturbances, threatening a rebellion in Bulgaria, lead to strained relations between Greece and Turkey. The Turkish Minister is recalled from Athens, and only the interference of Great Britain prevents hostilities.

1889. The revolution in Crete drives an army of Christian fugitives into Greece, where their presence by calling forth the sympathies of the people influences the government almost to the point of war.

1890. The Cretan rebellion leads to a political crisis; the ministry of **Tricoupis** is overthrown, and that of **Delyannis** substituted therefor.

1891. Anti-Semitic riots of the character of those in Russia occur in Corfu. A mob assails the Jewish quarter, demolishing the shops, and threatening to burn alive the inhabitants, some of whom are beaten and stoned to death.

1892. Another outbreak of religious fanaticism, but now directed against the Protestants, occurs in the Piræus. The Delyannis ministry is overthrown and Tricoupis again becomes premier.

1893. The canal across the Isthmus of Corinth, begun in 1882, is completed and opened, August 6.

1895. The elections of this year result in the triumph of the party of Delyannis, who is called by the king to form a new cabinet.

1896. The anniversary of Greek Independence is celebrated on April 6, by the reinstitution of the Olympic games; one hundred athletes from foreign countries, including twenty-one American competitors, participate in the contests in the manner of antiquity.

1897. The Cretan insurrection of the preceding year leads the powers to interfere in behalf of Turkey. The Greeks, however, espouse the cause of the **Cretans against Turkey** and become involved in a **brief war** with that power in which they are disastrously defeated.

1898. Prince George of Greece is appointed high commissioner of the powers in Crete, November 26.

1905. A proposal from Greece to annex Crete is refused by European nations in February. June 13, Theodore **Delyannis,** the premier, is **assassinated** by a gambler whose house has been closed by the government.

1906. April 27, **Olympic games** begin at Athens. The American team wins large plurality of events, Great Britain being second, Greece and Sweden third.

1908. May 12, France, Great Britain, Italy and Russia agree to withdraw their troops from Crete.

August 18, **Greece and Persia resume diplomatic relations** after an intermission of 2,399 years, the last envoys from Persia having been sent by King Darius to Athens and Sparta 491 B. C.

October 7, the union of Crete to Greece is proclaimed by popular assemblies. The Cretan Chamber or Boule officially ratifies this action on October 14.

1909. July 17, the cabinet resigns and a new cabinet is formed with **Rhallis as premier.**

During the summer the powers in concert compel Crete to lower the Greek flag and resume its former status.

HAITI.

THIS is a Republic, occupying the eastern third of a West Indian island, sometimes called by the Spanish name Santo Domingo but more often by its native name of Haiti.

The island was discovered by Columbus in January, 1493, and was named

by him Hispaniola or Little Spain. Colonization began three years afterward. Haiti preceded in development all the other possessions of Spain in the West. For about half a century there were more amicable relations with the natives than on the other islands. But as the discoveries were extended, some of the aborigines were carried away as slaves. The rich soil and the gold mines inflamed the lust of the conquerors, and in mining and agriculture the Indian population was consumed under the lash. Negro slaves were substituted, who increased in numbers and became the more numerous element in the population.

By the early part of the seventeenth century, the West Indies had become a resort for pirates and buccaneers. The piratical settlement, made at Saint Christopher, was broken up by the Spaniards in 1630. The pirates escaped first to Tortuga, and later took possession of a considerable territory in Haiti. This colony was ceded to France in 1697 at the Treaty of Ryswick.

As the settlements expanded and became populous, they grew rebellious. When the French Revolution broke out, the negroes and mulattoes in the island were ten times as many as the whites. They rose against their masters in a terrible insurrection. In 1793 the allied British and Spaniards sent a force to Haiti. In 1795, as a counter measure, the French Assembly issued a decree of emancipation for all the slaves. Toussaint l'Ouverture then appeared as the leader of the blacks. Their assaults were so fierce that the British were expelled. After the decree of emancipation Toussaint, as dictator, organized a government, placing himself at the head, first in nominal submission to France, but in 1801 demanding independence. During the following year a French army under Leclerc overthrew the negroes, captured Toussaint and sent him to France, where he died in captivity. But Dessalines, who succeeded Toussaint, defeated the French, whom in 1803 he was able to expel from the country.

An Empire was then proclaimed with Dessalines for Emperor. On his assassination in 1806, Christophe, a full-blooded negro, proclaimed himself king and successor to Dessalines. He was strongest in the northwest of the island, while Pétion, another leader, started a republic in the southwest. This republic was soon crushed by the Spaniards, who were gaining ascendency in the east, when in 1821 they too were expelled by a sudden insurrection. Pétion was succeeded by Boyer, who was able to organize all the people of the island into the republic of Haiti. After ruling for twenty years, he was at last overthrown and driven away. In 1844 the eastern and Spanish speaking districts, comprising about two thirds of the island, separated from the western part and set up the Dominican Republic. In the western portion, or Haiti proper, anarchy prevailed. Two years later a republican constitution was proclaimed under President Riché. He was deposed in 1847 by Soulouque, another negro, who was deposed in 1858 by General Geffrard, a mulatto, who was deposed in 1867 by General Salnave, who was deposed and shot in 1870 by Nissage Saget. The story of the last thirty-nine years is similar, the last episode being the overthrow in 1908 of President Alexis Nord by General Antoine Simon.

Government. A Republic under the Constitution of 1889, with a Chamber of the Communes of 95 members, elected for 3 years by popular vote, and a Senate of 39 members, elected by the Communes for 6 years. The two Chambers in joint session choose a president for 7 years.

Industry and Labor. There are large mineral resources undeveloped. The heavy export duty on coffee prevents the cultivation of the naturally most important product. Cocoa, cotton, hemp and tobacco are grown.

Religion. Most of the Haitians are Roman Catholics.

Education. There are supposed to be about 400 public schools and 5 lycées. The language is a corrupt French.

Defense. Nominally there are 6,828 men in the army. There is a fleet of six third-class cruisers.

The area is 10,294 square miles. The population by "ecclesiastical estimate" in 1906 numbered 1,500,000.

1846. **Republican constitution** proclaimed in **Haiti** under President Riché.
1847. Riché is deposed by **Soulouque** (a negro), who places himself at the head of the government in Haiti.
1849. The negro, Soulouque, proclaims himself emperor of Haiti.
1858. General Geffrard, a mulatto, leads a revolt in Haiti against Soulouque; and being successful, he is proclaimed president, December 22. Geffrard reëstablishes the constitution of 1846.
1867. President Geffrard of Haiti is deposed from office by General Salnave, who promulgates a new constitution, June 14.
1870. The administration of President Salnave of Haiti is overthrown, and he is shot, January 15. His successor, Nissage Saget, accedes to the presidency in May.
1879. October 22, **Salomon** is elected president of Haiti.
1888. President Salomon is deposed; civil war ensues between the factions of the rival candidates for the presidential position.
1889. October 6, **Hippolyte** is elected president of Haiti; his accession to office introduces a term of peace; the country becomes comparatively free from disorders.
1902. In May President Simon Sam resigns, and ex-President Boisrond Canal contends with General Firmin for control. In October General Firmin withdraws. During the contest the German gunboat *Panther* sinks the Haitian boat *Crête-à-Pierrot*.
1903. In December, 1902, **Alexis Nord becomes president.** In January he grants an amnesty to many former rebels. February 26, Port de Paix, the center of the logwood export trade, is destroyed by fire.
1904. January 6, an attempt is made at a revolt against the President. The attempt fails, and several of the leaders are killed.
January 13, France demands that the imprisoned officials of the National Bank of Haiti be provisionally released.
June 22, the soldiers of the palace guard attack the French and German ministers. The matter is settled amicably.
1908. July 5, fire destroys the business portion of Port au Prince.
December 2, a revolution overthrows President Alexis Nord, who flees from the capital.
December 17, the Congress unanimously elects General **Antoine Simon** president.

ITALY.

Of all the nations of Europe, Italy was most transformed by the passage from ancient to modern times. The transition from the Roman Empire, with its unmeasurable solidarity, to the disrupted Italy of the Middle Ages, is one of the most striking features of European annals.

As the first step, the Roman Empire was divided; then the Western, or Italian, division was extinguished; then the barbarian kingdoms supervened; then the free cities and petty republics rose, and in the midst of these stood the immense fabric of the Catholic Church. Contention, intrigue, despotism, war, and subjugation came afterward, until the unity of Italian society was completely destroyed.

Such was the condition as late as the middle of the seventeenth century. At that period there was not within the limits of Roman Italy a single considerable state. Of the powers that still existed, Venice was the most important. In Florence, Genoa, and Pisa, a certain residue of the old order survived. Rome was the center of the States of the Church which included a large part of middle Italy. All of the petty principalities which had survived were segregated, and most of them were hostile.

Political power, supported with armies and distinguished with crowns, had been long since transported beyond the Alps. The kingdoms of central Europe contended for the possession of the Italian principalities; bought them, sold them, made them an appanage. Italy viewed as a whole had little influence upon the course of events. But for the long and shadowy hand of Rome stretched out, the petty powers of the peninsula might almost be disregarded.

Such was the condition of affairs during the reign of Louis XIV. of France. Piedmont was ruled by the House of Savoy; but in 1675 was subdued and taken by the French. Venice, meanwhile, after the discovery of an all-water route to the Indies, had lost her commercial ascendency in the Mediterranean countries. Some of her possessions, such as the Island of Crete, were taken away. In 1696, Louis XIV. found it desirable to deliver Piedmont to its native rulers. Ten years afterwards, when he was hard pressed by Marlborough and Prince Eugene, he agreed that Milan, Mantua, and Montferrat should be added to Piedmont. By the Treaty of Utrecht, Sardinia and Naples went to Austria. But that power gave back Sardinia in exchange for Sicily.

In 1731, Parma and Piacenza were ceded to Charles of Spain (afterwards Charles III.), but when, in 1738, that prince was chosen for the throne of the Two Sicilies, the two principalities were given back to Austria. Meanwhile, Tuscany, long under the dominion of the Medici, passed, in 1637, to Francis of Lorraine, who, by his marriage with Maria Theresa, was already in reach of the scepter of the Holy Roman Empire. In 1748 Parma and Piacenza were conceded to Philip of Spain.

It thus came to pass that within one hundred years after the Treaty of Westphalia nearly the whole of Italy had lost its independence. The republics of Venice and Genoa were nearly all that remained, and these were scarcely more than political names. The remainder of the peninsula was distributed, part to the House of Hapsburg-Lorraine, part to the House of Bourbon, and part to the House of Savoy.

This political condition, involving the loss of national spirit, was accompanied by the degradation of the Italian peoples in almost all particulars of the civilized life. The moral condition, the literary aspiration, the artistic impulse, and the brave spirit of adventure which had hitherto prevailed, went out on the receding tide of nationality.

It was in this condition of miserable dependency that Bonaparte, at the head of the French republican armies, found Italy at the close of the eighteenth century. The first general result of his campaigns was the creation of the Cisalpine republic out of Milan, Mantua, Modena, and a part of Parma. The Ligurian republic also was instituted, having Genoa for its center, and the Roman republic was proclaimed, having the ancient capital for its seat. The Neapolitan state was invaded, conquered, and made into the Parthenopean republic. From this time forth to the downfall of Napoleon, the Italian states were at once the wage and the premium of battle to France and Austria. The French emperor had in the meantime instituted the kingdom of Italy and conferred it upon his brother-in-law, Murat. By the Congress of Vienna the kingdom of Sardinia was restored to Ferdinand IV., and to this Genoa was added. Lombardy and Venice were given to Austria, and the other states were parceled out without any attempt to reinstitute Italian nationality.

The history of Italy during the first half of the nineteenth century is little more than a recital of the struggle for national existence. Within five years after the Treaty of Vienna, popular uprisings began to occur, and these in several instances expanded to revolutionary proportions. Such was the case in 1831, and still more conspicuously in 1848, when Sicily declared independence of Naples. In the same year the patriots of northern Italy rose against the Austrian domination. Charles Albert of Sardinia became the leader of the national party against the foreign usurpations. The Austrians under Radetzky, however, were too powerful for the nationals; the revolted duchies were restored to their rulers beyond the Alps, Sardinia was humbled, and the patriotic Charles Albert yielded his throne to his no less patriotic son, Victor Emmanuel.

Nothing in history is more dramatic than the successive steps by which Italy won her independence and unity during the next quarter century. The statesmanship of Cavour, the popular leadership of Garibaldi, and the steadfastness of King Victor, were directly aided by the whole course of European affairs. The solid foundation was laid by Cavour, whose wise administration gave such prosperity to the little kingdom of Sardinia (or Piedmont) that it came to be accepted by patriotic Italians as the herald and nucleus of a free Italy. The brilliant theoretic republicanism of Mazzini could not hold its ground against the practical success of constitutional monarchy under the House of Savoy. Cavour's statesmanship passed from prudence to audacity when he threw his little force into the Crimean War as the ally of France and England, and so won prominence in Europe and the substantial friendship of France. That friendship was quickened into action by the personal impression which Cavour made upon Louis Napoleon. The emperor in 1858 openly espoused the cause of Italy, and in conjunction with Sardinia attacked Austria on the plains of Lombardy.

The great victories of Magenta and Solferino seemed to promise a complete triumph, but Louis Napoleon was obliged to stop halfway in the Treaty of Villafranca, and Venetia was left subject to the hated foreigner. In the next year Garibaldi won the emancipation of southern Italy, by leadership so brilliant that the more conservative powers would not or could not check it. But his assaults on Rome failed, for Louis Napoleon supported the Pope, and Italy dared not break with France. The war between Prussia and Austria threw Venice into the arms of Italy. Then came the chance to win Rome, when France was distracted by her struggle with Germany; and after many centuries Italy stood forth again, whole, independent, a power among the powers of the world, and with her internal fortunes in her own hands to make or mar. In recent years she has been joined with Germany and Austria in the *Dreibund*, or Triple Alliance, against the combination of France with Russia. The military burden has made her domestic problems enormously difficult; she has found that unity and independence are but the beginning of national salvation.

Government. The government of Italy is a constitutional monarchy. The executive power is vested in the sovereign, and the legislative authority rests in him conjointly with the parliament. The present constitution dates from the year 1848. At that time Charles Albert, of Sardinia, gave to his subjects a Fundamental Constitution of the Kingdom. This instrument has been expanded and modified for the kingdom of United Italy. The Italian parliament consists of two chambers, — a senate, and a chamber of deputies. The senate includes the princes of the royal house, whatever may be their number, and senators nominated by the king on the basis of their achievements, wealth or rank. Whatever distinguished work for the benefit of the nation may have been done is regarded as a qualification for the senatorial office. The number of members is unlimited; but the senate is usually composed of about four hundred members. The chamber of deputies is composed of 508 representatives of the people, chosen by ballot by the people, with educational and property qualifications. The enrolled electors of the kingdom in 1904 numbered 2,541,327. The kingdom is divided into electoral districts, each district having its representative in the lower house.

The king as chief executive is assisted in the exercise of his authority by a ministry of eleven members, as follows: President of the Council and Minister of the Interior; Minister of Foreign Affairs; Treasury; Finance; Justice and Ecclesiastical Affairs; War; Marine; Commerce, Industry, and Agriculture; Public Instruction; Public Works; Posts and Telegraphs.

Industry and Labor. From time immemorial Italy has been regarded as one of the most fertile regions of the earth. Relatively to the geographical area, a larger proportion of the lands is arable and highly productive than in any other country. On this account the peninsula was selected by the Italian branch of the West Aryan races as a seat of primitive civilization long before the beginnings of authentic history.

With the exception of a few barren mountain peaks and other unfavored spots, the whole of Italy is cultivable. All of the productions of the north temperate zone and of the subtropical countries flourish and abound. The conditions of climate and season are highly favorable to the out-of-door life. The old Romans were farmers, and their descendants are farmers and vine keepers and gardeners, cattle raisers and shepherds to this day. Since the establishment of the kingdom of Italy in 1861, the government has given much attention to the restoration of the old agricultural industries. The principal productions of Italy are the cereal grains, the citrous fruits, the fig, date, pomegranate, grape. The native products of the woods also abound, such as the mulberry, chestnut, almond, and all manner of nuts. Italy produces, in a word, every variety of natural gift essential to the development and perfection of civilized life.

In the midst of this natural abundance the laboring population of Italy has, through the whole historical period, been of an abject and half-servile character. Under the later Roman republic and the Empire, the laborers sank into servitude. During the despotisms of the Middle Ages, this condition, except in the City republics, was not improved. In modern Italy, bad government and social degradation have been the concomitants of a servile type of industrial life.

The workingmen of the Italian cities are poor and ignorant. Their manner of life and spiritless conformity to the existing order are the most pitiable aspects of Italian society. The national debt of Italy, the conditions of military service, and the inadequate wages paid for labor have resulted in the penury of the masses, and their reduction to a state only a stage removed from slavery.

Religion. The state religion of Italy is the Roman Catholic. The tendency, however, since the establishment of the present kingdom of Italy, has been in the direction of toleration and liberalism. Many acts of the Italian parliament and of the executive have looked to the establishment of religious liberty. The body of the people are Catholics. Other religions are no longer persecuted. The Catholic hierarchy, headed by the Pope, is the greatest ecclesiastical establishment in the world.

The relations of church and state in Italy are unique. The two powers are at odds on a question of prime importance — the validity of the tenure by which the secular government holds as its own the city of Rome and the adjacent territories which, until 1870, constituted the States of the Church. This appropriation by the kingdom of Italy the Pope treats as robbery and usurpation, and perilous to the free exercise of his spiritual functions. It is this question which determines the chronic antagonism between Pope and King. In other respects and in the main the secular government maintains a respectful attitude towards the church and its head, though it has shorn some of the great ecclesiastical corporations of much of their power and possessions. The ideal of Cavour, the real founder of modern Italy, was "a free church in a free state," and a considerable approximation has been made to this. Protestantism has never gained a wide hold in Italy; the population mainly divides, in a way too subtle for any census to reach, between Catholicism and some shade of rationalism or unbelief.

Education. The educational system of Italy is supported partly by the nation and partly by the communes and provinces. This principle applies to schools of every kind. The state regulates the qualifications of all instructors, and to a certain extent determines the character of all educational institutions. A private school, strictly so defined, cannot exist in Italy except under authorization of the state.

Elementary education is free and compulsory for all children between the ages of six and nine years. The law of compulsion, however, was never strictly enforced. So a more stringent law was passed in 1904, attaching disabilities to illiterates born after 1890, and further disabilities to future illiterates born after 1900. Under the law of 1906 five thousand schools are provided for illiterate adults. The schools of Italy are classified under four heads: Elementary Schools; Schools of Secondary Instruction, including Classical Institutions; Schools of Secondary Instruction, including Technical Schools; and Schools of the Higher Learning. The primary schools are supported by the communes, assisted with occasional subsidies from the state. The normal schools are under state patronage. The elementary and technical schools are generally supported by the communes, though a portion of the funds for the support of these is contributed by the state. Italy has twenty-one universities supported partly by endowments and partly by the state. Some of these are of high order. The oldest are the University of Bologna, founded in 1200; Padua, 1222; Naples, 1224; Genoa, 1243; Perugia, 1276; Macerata, 1290; Pavia, 1300. They have about 25,000 students of whom more than a fifth are in the University of Naples.

Defense. Italy, being a peninsula, has an extensive sea line. This measures 3,383 kilometers, — exclusive of the coast lines of the Italian Islands. The land frontier bordering on France is 495 kilometers in extent; on Switzerland, 655; on Austria-Hungary, 750; and on San Marino, 38.5. On the north the passages into Italy from central Europe are easily and well defended. The Alps are a sufficient barrier except the few passes which they afford. The valley of the Po is protected with many fortifications, some of which have existed since the Middle Ages. The Italian seaboard at all accessible points is well fortified, as are also the islands and the straits of Messina. The capital is surrounded by a circle of fortifications, the better parts of which have been produced since 1861.

The Italian military system, though less exacting and less efficient, is modeled upon that of Germany. Service, either in the army or navy, is compulsory and universal. It is the effort at the least cost of time and money to produce an army as large as possible in the highest degree of efficiency. Service begins at the age of twenty and continues for nineteen years. Recruits are divided into three classes. The first class is assigned to the permanent army; the second to the permanent army but having "unlimited leave"; the third class consists of exempts from active service, who are enrolled in the territorial militia and receive training thirty days. The men of the first class spend, according to individual proficiency, two to three years in the ranks and are then for seven or six years on "unlimited leave." They are next in the mobile militia three or four years and in the territorial militia for seven years. On a peace footing the army comprises 284,000 men of all ranks. It is asserted that Italy can put 3,000,000 men into the field in time of war.

The Italian Navy ranks seventh among the great powers. It consists of 6 modern and 6 old battleships, 6 armored cruisers, 14 protected cruisers, 3 torpedo gunboats, 13 destroyers, 73 first-class modern torpedo boats, 6 submarines and 85 various craft, some obsolete. In addition 2 battleships, 4 armored cruisers, 4 destroyers, and 7 submarines were in advanced course of construction at the close of 1907, and 27 other vessels were then building or projected.

The area of Italy is 110,646 square miles. In 1907 the inhabitants numbered 33,640,000.

1669. **Venice,** after prolonged warfare with the Turks, is obliged to **abandon Candia.**

1676. A revolt in Naples, beginning in 1647 under the leadership of Masaniello, leads to the **transfer of Sicily** to Louis XIV. of France.

1684. The Venetians, under the lead of Francesco Morosini, conduct a campaign in the Morea, and wrest the Peloponnesus from the Turks. The Venetian ascendency in the Ionian islands is maintained.

1707. The **armies of Louis XIV.,** frequently defeated by Prince Eugene of Savoy, are **driven out of Italy.**

1713. By the Treaty of Utrecht, Sicily, with Montferrat and Alessandria, is assigned to Victor Amadeus with the title of king.

1714. Elizabeth Farnese, heiress to the last Duke of Parma, is married to Philip V. of Spain. This marriage gives excuse to Philip for breaking the peace of Europe by invading Sardinia. The king of Sicily is obliged to exchange his kingdom for Sardinia.

1720. The **House of Savoy,** destined to become the dynasty of United Italy, assumes the royal rank.

1730. Victor Amadeus abdicates the throne in favor of his son, Charles Emmanuel III.

1731. Antonio Farnese, Duke of Tuscany, dies, leaving his duchy to be assigned to **Francis of Lorraine.**

1732. Victor Amadeus, having renounced his abdication and making an unsuccessful attempt to recover his authority in Turin, being overthrown and imprisoned, dies in the Castle of Rivoli.

1737. Gian Gaston, last of the grand dukes of the Medici, dies, and his rights also pass to Francis of Lorraine.

1740. **Lombardy** becomes the seat of a war in which the claims of **Maria Theresa** are met with the counterclaims of **France;** the king of Sardinia as arbiter decides in favor of the House of **Hapsburg-Lorraine.**

1745. Charles Emmanuel and his army of Sardinians are defeated by the combined forces of France and Spain.

1746. The army of Francis of Lorraine (Francis I. of Germany) gains a victory over the French in the battle of **Piacenza.**

1748. By the Treaty of Aix-la-Chapelle, **Italy is redivided among Austria, France, and Savoy;** Austria retains Milan and Tuscany, Parma and Piacenza are assigned as a duchy to Don Philip, brother of Charles III. The latter is confirmed in the kingdom of the Two Sicilies. Modena passes under the protection of the French; the Italian powers enjoy a **period of repose.**

1765. Francis I. dies and transmits Tuscany to his third son, Peter Leopold, who reigns as an independent sovereign.

1790. Peter Leopold becomes the **Emperor Leopold of Austria,** and transmits the kingdom of Tuscany to his son Ferdinand. The contemporary reign of Charles Emmanuel of Sardinia is oppressive in a political sense, but otherwise enlightened. The two kings by their policy furnish the motive for the **revival of the independent spirit** among the Italians. A number of Italian writers, in sympathy with the encyclopedists of France, promote the spirit of liberty.

1797. The status of Italy is determined by the Treaty of Campoformio, in which **Napoleon** decrees the existence of **four republics,** having their capitals at Milan, Genoa, Bologna, and Rome; Venice is assigned to the Austrian Empire.

1798. The Parthenopean republic is created in southern Italy, having Naples for its capital. Charles Emmanuel III. resigns, and Pope Pius VI. flees from Rome into France, where he dies soon afterward.

1799. The Italians rise against the French domination and expel their rulers.

1800. Napoleon, returning from Egypt, is victorious over the Austrians in the great **battle of Marengo.**

1804. **Napoleon,** having become Emperor of the French, decrees a **new settlement** of Italian affairs. He crowns himself with the iron crown of the Lombard kings. He restores Rome to the Pope, and Naples to Ferdinand. Tuscany becomes the kingdom of Etruria. The Ligurian and Cisalpine republics are combined as a viceroyalty under Prince Eugène Beauharnais. Venice is added to the Italian kingdom.

1806. The French Emperor transfers the kingdom of Naples to his brother **Joseph,** and afterwards to his brother-in-law, **Murat.**

1809. Pius VII. is deposed and Rome becomes a part of the French Empire. The kingdom of Etruria is assigned to Napoleon's sister, Eliza, as duchess of Tuscany.

1815. By the Treaty of Vienna, the **Napoleonic conditions** in Italy are **swept away,** and the preceding political arrangements are, as nearly as practicable, restored. The returning sovereigns of the old order regard the restoration as a warrant for tyranny and oppression.

1820. **Revolutions** in several of the Italian states break out. The royal army mutinies in Naples. An Austrian army 80,000 strong is sent into

Lombardy to suppress the insurrections. The fleets of Great Britain and France lend their assistance.

1821. A congress of the powers is held at Laybach; **Austria** is authorized by the body to **crush the revolution.** On March 13, Ferdinand abdicates, and his cousin Charles Albert becomes regent. Charles Felix, brother of the abdicating king, returns and takes the scepter; **absolutism is restored.**

1830. A popular insurrection begins in Modena; the revolution spreads to Parma, Bologna, and Romagna. Austrian troops bear down on the insurgents and the rebellion is quelled.

1832. Louis Philippe of France occupies Ancona with a French army.

1843. The question of **Italian nationality** is agitated by **Mazzini** and Gioberti.

1846. On the death of **Pope Gregory XVI.**, he is succeeded by Cardinal Mastai Ferretti as **Pope Pius IX.** He undertakes many reforms and is regarded with hope by the moderate liberals as a leader of the national cause.

1848. **Italy,** in sympathy with revolutionary France, **breaks into revolt** against her sovereigns. Sicily declares independence. A radical administration is established in Naples. Lombardy rises, and Milan expels the Austrian governor. Venice also expels the Austrians. The duchies free themselves. Pope Pius IX. escapes from Rome in disguise. Charles Albert of Piedmont declares war against Austria. Radetzky, at the head of an Austrian army, marches into Italy.

1849. A **republic** is established in **Rome,** with **Garibaldi** and **Mazzini** as leaders, but after a resolute defense the city is taken by the French in July. Rome, Venice, and Milan are taken by the Austrians, and in the battle of **Novara,** March 23, 1849, the power of Piedmont is seemingly destroyed. Charles Albert abdicates, and is succeeded by his son, **Victor Emmanuel II.** By him the spirit of nationality is encouraged. Piedmont becomes the basis of Italian unity.

1850. Legislative reforms are instituted in Piedmont (Sardinia), culminating, in 1854, in an ecclesiastical reform decree. **Count Cavour** joins the government and becomes Minister of Commerce.

1853. **Cavour is made Prime Minister,** and the fortunes of Italy revive under his skillful diplomacy. Sardinia becomes a participant with the allies against Russia in the **Crimean War.**

1856. Cavour represents the kingdom of Sardinia at the Congress of **Paris.** He secures the sympathy of the **Emperor Louis Napoleon.**

1859. Victor Emmanuel, on January 1, declares that the government is not insensible to the "cry of dolor" arising from Italy. The **Franco-Italian war** with Austria ensues. The allies triumph at **Magenta** on June 4, and at **Solferino** on June 24, and the **Treaty of Villafranca** is concluded, by which the Mincio is made the boundary between Sardinia and Austria.

1860. **Garibaldi** leads a successful insurrection in **Sicily and Naples.** The Sardinian government allies itself actively with the insurgents, and the king takes the field with Garibaldi, who, on the completion of the victorious campaign, resigns his position as dictator. Sicily and Naples are by popular vote **annexed to Sardinia.**

1861. The **first Italian parliament** meets, and **Victor Emmanuel** is made **king of Italy.** Count Cavour dies, June 5.

1862. **Garibaldi** leads a force against Rome; he is **wounded and captured** in a skirmish at Aspromonte. He and his followers are given amnesty, and he remains the popular hero; but the government, out of deference to France, leaves Rome under the power of the Pope.

1864. The capital of the kingdom is fixed at **Florence.**

1866. **Italy joins Prussia in war against Austria.** Her army is beaten at Custozza and her navy near Lissa; but victorious Prussia secures the **liberation of Venetia,** which is united with Italy. Except Rome, the whole of Italy becomes united and independent.

1867. **Garibaldi** heads repeated attacks upon Rome, but he is finally **defeated** at Mentana, and **sent into retirement** at Caprera.

1869. An **ecumenical council** meets at Rome, and in July, 1870, affirms the dogma of the **infallibility of the Pope.**

1870. **France,** absorbed in the war with Germany, **withdraws her troops from Rome;** the Italian troops enter almost without opposition; union with Italy is accepted by a popular vote, and Victor Emmanuel makes Rome his **capital;** Pope Pius IX. (though calling himself a prisoner) is permitted to retain the Vatican and its dependencies.

1878. **Victor Emmanuel dies,** January 9, and is succeeded by his son **Umberto** (Humbert I.). **Pope Pius IX. dies,** February 7, and Cardinal Pecci is elected his successor as **Pope Leo XIII.** The new Pope, while strongly maintaining the papal claims to temporal dominion, is regarded as a liberal, and more disposed than Pius IX. to harmonize the ecclesiastical force with the popular and democratic spirit.

1880. The movement of France for the annexation of Tunis arouses the jealousy of the Italians, and in April a vote of confidence in the government fails. Signor Cairoli appeals to the country, and a majority is secured for the ministry. Garibaldi and his son resign from the Chamber on account of the alleged misconduct of the government.

1881. **The right of suffrage is extended and reformed.**

1882. The celebration of the anniversary of the Sicilian Vespers is made the occasion of a patriotic outbreak in which the republican and radical factions make violent demonstration against the government.
Giuseppe Garibaldi, the popular hero and liberator of Italy, **dies.**

1884. The Asiatic cholera appears in the Italian ports, and spreads with great rapidity into the provinces. Several cities are desolated; Naples suffers most from the plague, which continues to November.
An International Exposition of Arts is held in Turin.

1886. The **antagonism of Church and State** becomes acute. Pope Leo issues an allocution filled with invective against the government. The Clerical party is accused of conspiracy to overthrow the existing order. The Pope's letter in praise and support of the Jesuits arouses the Liberal party, and a commission is appointed to investigate the monastic institutions.

1888. The conflict between the Vatican and the Italian government becomes more serious. Pope Leo puts forth positive assertions of temporal sovereignty, denounces the government of King Humbert as a usurpation, and calls upon the Clergy and the Clerical party to repeat and maintain his protest. The Senate replies with the enactment of stringent laws to prevent the clergy from demonstrations in favor of restoring the Pope to temporal power. The celebration of the Pope's jubilee intensifies the animosity. The foreign relations of Italy are strained. Count Corti, the Italian ambassador at London, is dismissed. Italy assumes a determined attitude in resisting the ambition of France to extend the frontier line of that republic in Africa. In July, Italy takes possession of Zulla in the Egyptian Sudan.

1889. **Crispi,** by the reaction following an attempt to assassinate him, **strengthens his government** and confirms his ascendency.
Negotiations are carried on with Great Britain respecting an alliance with that power to maintain the freedom of the Mediterranean.

1890. In the elections of this year, the government under direction of Signor Crispi is indorsed by an overwhelming majority.
The financial embarrassment of the kingdom becomes so grave as greatly to disturb the administration and to portend national bankruptcy. This leads to a sudden and popular reaction against the Crispi ministry.

1891. **The Crispi government is overthrown,** to be succeeded by that of the **Marquis di Rudini.** The new government pursues the same policy as its predecessor, particularly in respect to the maintenance of the Triple Alliance, or Dreibund.
The labor troubles, general throughout Europe, become acute in Italy; at the May Day festivals serious riots occur in many places.
The distress of the people is intensified by the closing of the French ports against Italian commerce.
In the autumn of this year, devastating floods occur in the low countries along the rivers, causing great loss of life and property.

1892. The popular discontent arising from the burden of debt upon the people leads to the **overthrow of the Rudini ministry;** Signor **Giolitti** becomes Prime Minister.
A proposition to extend the banking laws for a period of six years leads to the exposure of astounding corruption and frauds among the government officials. The Prime Minister becomes involved in the scandal, and is deposed from the government; Signor **Zanardelli** succeeds him. The great Trust Company called the Credito Mobiliare suspends, and the government is shaken to its foundations; Signor **Crispi** is recalled from Sicily to **assume control** and restore political order.

1893. In March of this year is celebrated the **Jubilee of the Pope,** this being the fiftieth anniversary of Leo's consecration as Archbishop of Damietta. The ceremonies attract multitudes of distinguished strangers to Rome, among them Emperor William II. of Germany; St. Peter's is filled by a crowd of 60,000 persons, and gifts to the value of more than $1,000,000 are presented to Leo XIII.
On December 3, Italian troops rout the enemy in a **campaign against the Dervishes,** near Massaua in Africa. A severe battle occurs near Kassala in Arabia, on December 31.

1894. The government under Signor Crispi is unable to cope with the difficulties of the nation, and the parliament is dissolved, June 5.

1895. The government, notwithstanding the financial scandals in which it is involved, obtains a majority in the elections, chiefly by the action of the Pope in forbidding Catholics to go to the polls.
An anarchistic bomb explodes in the French consulate in Ancona.

1896. The Italians are victorious at Massaua in Abyssinia on April 12, but on March 1 at Adowa suffer great defeat.
The final overthrow of the Crispi ministry follows further exposure of government fraud in the bank scandals and the defeat of the army in Abyssinia; the **Marquis di Rudini** becomes **premier.**

1898. In May, **formidable riots** in Milan are suppressed only with much bloodshed; similar disturbances occur in other large cities; a special occasion is the high price of bread, but a more general cause is suffering under heavy taxation and alleged republican conspiracies.

1899. June 23, the king promulgates law against socialistic and republican activity. Great popular opposition.

1900. **King Humbert** is assassinated, July 29, and is succeeded by his son **Victor Emmanuel III.**

1901. Owing to the increasing importance of the annual Catholic congresses, gatherings in churches, except for worship, are prohibited.
The census shows a population of 32,475,000, with a ratio of increase the greatest in Europe.

1902. February 20, Pope Leo XIII. enters on the 25th year of his pontificate.
In February a serious Socialist plot is suppressed.
June 14, the **Campanile of St. Mark's, Venice, falls.** It was 323 feet high, and was begun in the year 888.
September 26, a cyclone in Sicily destroys 500 persons and much property.
For *Dreibund*, see GERMANY.

1903. **Pope Leo XIII.** celebrates the **25th anniversary** of his election on February 20, and of his coronation on March 3. On July 20 Pope Leo XIII. dies, after an illness of three weeks. He is buried, July 25, in St. Peter's. On August 4 **Giuseppe Sarto,** Patriarch of Venice, is elected Pope on the seventh ballot. He is crowned as **Pius X.** on August 9, at St. Peter's, in the presence of 70,000 persons.

1904. March 27, conference between the King and Kaiser William.
In May the Vatican protests against the visit of President Loubet of France to King Victor Emmanuel. This arouses bitter resentment in the Italian Chamber of Deputies, and also in France.
September 15, a son is born to King Victor Emmanuel.
In elections of November 6 and 13 the Extremists are defeated.

1905. February 24, the **Simplon tunnel** between Italy and Switzerland is **completed.** It is officially opened April 2. July 1, the state assumes control and management of nearly all railway lines.
September 8, an earthquake in Calabria destroys 18 villages and 400 lives.
December 17, the cabinet resigns.

1906. February 2, ministry resigns. On February 8 Sidney Sonnino as premier forms new ministry.
February 11, an earthquake in Calabria does much damage.
April 4–15, the most severe eruption of Vesuvius since destruction of Pompeii, A. D. 79, occurs. Several small villages and towns on or at base of mountain practically destroyed. Falling ashes cause great damage at Naples and nearer points. Several hundred lives lost.
In May the Sonnino cabinet resigns, and new cabinet is formed with Giolitti as premier.
August 3, fire at International Exposition at Milan. Loss $2,000,000.

1907. May 15, the Minister of Foreign Affairs, Signor Tittoni, in the Chamber of Deputies formally details the Italian program in regard to foreign relations.

1908. April 2, **strike riots** at Rome.
April 23, first Women's Congress ever held in Italy opens in Rome.
December 28, an **earthquake** in Calabria and Sicily **destroys Messina, Reggio** and several villages. The loss of life is estimated at from 125,000 to more than 200,000. The property loss is incalculable. The catastrophe is the most appalling in the history of the more civilized peoples. The King and Queen go at once to assist in the rescue and relief work, and the entire civilized world contributes largely in money and supplies.

1909. April 18, most elaborate ceremonies are held at St. Peter's, Rome, at the beatification of Joan of Arc.
December 2, the **Giolitti** ministry **resigns, and on December 10 a new ministry** is formed under **Sonnino.**

ITALIAN POSSESSIONS.

Eritrea is a territory of about 88,500 square miles on the strait of Bab el Mandeb. The coast line is 670 miles long. Pasture is abundant, but scantiness of water prevents the raising of crops. A chief industry is pearl fishing and cultivation of mother-of-pearl. There are gold mines in the vicinity. Population is supposed to be 450,000.

Italian Somaliland is a territory of about 100,000 square miles and 400,000 inhabitants, lying east of Abyssinia and of British East Africa. In accordance with agreement of January 13, 1905, Italy acquired the sovereignty of this territory by payment of $700,000.

Tientsin is a concession to Italy by agreement made with China on June 7, 1902. It is situated on the left bank of the Peiho. The area is 18 square miles and the population about 17,000. Salt pits are near the village.

JAPAN.

THE credible history of Japan is assumed by native historians to begin with the emperor posthumously called Jimmu Tenno, 660 B. C. It is difficult, however, to consider fully authentic any recorded event before the fifth century of our era. At that time writing was introduced and elements of Chinese culture were obtained through Korea. Buddhist missionaries began the conversion of the people during the last half of the sixth century. In a few generations national institutions and ideas were supplanted by those imported from the continent. By the middle of the seventh century, a noble family, the Fujiwara, deprived the emperor of his actual control of the government, themselves ruling the country through feudal fiefs and keeping the nominal sovereign in luxurious impotence. About 1050 the Fujiwara were overthrown and nearly a century and a half of civil war ensued. At last arose the shogunate, a most original political creation. The shogun, while acknowledging the titular supremacy of the mikado and maintaining for him an idle and useless court, allowed him no share in the administration of the realm. His own headquarters were far removed from the debilitating influence of the capital, and to him the feudal lords were bidden to look for governance.

This curious dualism in administration continued until the year 1868, but with notable breaks when some vigorous family arose and replaced a house that had become too feeble to maintain its position. The most violent convulsion in Japanese history occurred in the latter half of the sixteenth century. The power of the shoguns had waned, each noble took the law into his own hands and general disorder was the result. Prolonged anarchy leads to absolutism and Japan was ready for anything that promised to restore order. Then three men arose in succession: Ota Nobunaga, who humbled the nobles; Hideyoshi, who crushed opposition and conquered Korea; and Iyeyasu, shogun in 1603, who centralized the government in the new capital, Yeddo, and so curbed the turbulent daimios as to ensure his own dynasty permanent control. He found a powerful aid in the firearms which were then first brought from Europe and which enabled him to reach the feudal lords in their strongest fastnesses. At the same time came Christianity which, after the conversion of certain districts, became associated with the rebellious element and about 1640 was exterminated after a merciless persecution.

The Tokugawa dynasty of shoguns, founded by Iyeyasu, ruled Japan with an iron hand for two hundred and sixty-five years. The founder's astute system of military and police control, of espionage, of sumptuary laws, and of society carefully divided into castes, maintained the authority of his less able successors. It is probable that the policy of shutting all foreigners out and all natives in was the device of his successors and not his. For two centuries and a half Japan experienced the doubtful advantages of complete isolation, of perfect freedom from strife, and of intellectual stagnation. During this time the Dutch only of Europeans were allowed to carry on a severely restricted trade at their factory in Nagasaki, where they remained practically as prisoners.

The United States was the first power to break through the political barrier set up against the outside world. In 1854 Commodore Matthew Calbraith Perry, backed by an impressive squadron but without actual employment of force, succeeded in concluding a treaty with the shogun at Kanagawa, admitting Americans to two Japanese ports and securing humane treatment for whalers wrecked on the coast. Other western nations demanded treaties. The Japanese ruling caste were in consternation. Unable to prevent the coming of foreigners, they fomented rebellions, assassinated Europeans, and rallied round the long-discredited mikado as the ancient head of the state. Events of the utmost importance to Japan followed one another with startling rapidity. In 1868 the last shogun was forced to resign and the shogunate was suppressed. A year later feudalism was abolished, the mikado became an actual and active sovereign, the capital was removed from Kyoto to Yeddo, now rechristened Tokyo, or the "Eastern Capital."

The awakening of Japan is without a parallel in Oriental history. A foreign fever possessed the nation, making it eager to secure any material and political advantage afforded by western civilization. Since 1867 the ruler of Japan has been the Emperor Mutsuhito, remarkable as a man and as a sovereign in this or in any age. In 1889 he promulgated a constitution, under which his people have made their notable record of progress and development. The privileges, granted by that constitution, he has tended to enlarge rather than curtail. Moreover, he has shown the prime characteristic of greatness in a ruler by his ability to choose for the highest responsibilities the best qualified in the land. The defeat of China in 1895 and of Russia in 1904–05 are the spectacular achievements of his reign.

Government. By traditional Japanese theory the whole duty of the subject is to obey and in practice personal loyalty to the head of the state is developed into a religion. This head is the emperor, commonly designated among Europeans by the poetical title of mikado. In the emperor are combined the rights of sovereignty and in him is vested all political power. The cabinet which he appoints is responsible to him only. It consists of a Prime Minister; a Minister of Foreign Affairs; Interior; Finance; War; Marine; Justice; Communications. The Imperial Diet is composed of a House of Peers and a House of Representatives, which must meet annually. The House of Peers contains usually about 360 members, but the number is variable. The peers hold office for life or for seven years, according to class. The 379 members of the House of Representatives are elected by secret ballot, one deputy for every 127,000 inhabitants. There is a property qualification for voter and for representative. For local government the country is almost endlessly divided and subdivided.

Industry and Labor. The climate, tropical in the south and temperate in the north, results in marked variety of products, — tea, sugar, rice, barley, and rye, the orange, and the persimmon. The manufactures of Japan are famous, including silk and cotton fabrics, porcelain, paper, Japanned and lacquered wares, bronzes and all sorts of metallic goods.

Religion. The virtues of loyalty and respect for parents and age are nowhere carried farther, yet the Japanese are not in the western sense a religious people. The constitution guarantees absolute freedom of faith and practice, provided it does not disturb general order. Shinto, the original Japanese religion, has neither dogma nor moral code. It combines mythology and a politico-religious ritual, and its supreme tenet is the inculcation of implicit obedience to the heaven-descended Mikado. Buddhism was introduced from Korea in the sixth century. Confucianism, accepted by the educated classes, became the basis of the educational system and molded the intellect of the country. The Greek, Protestant, and Roman Catholic missions have had large influence. There are now over 1,200 Christian churches of the various communions.

Education. In 1907 there were 7,939,498 persons attending school. The educational system is carefully graded. Elementary education is obligatory. There are about 28,000 primary schools. Above all are the Tokyo Imperial University and Kyoto Imperial University, both supported by the government. Both are equipped with the usual university departments. In 1907 Tokyo University had 305 professors and 5,321 students; Kyoto University, 170 professors and 1,520 students.

Defense. The modern organization of the army was begun in 1872 under French officers, who were succeeded in 1885 by Germans. The German military system has been largely followed. No country has devoted more care and attention to every military detail. Because of its almost perfect organization and administration and because of its remarkable courage and discipline, the Japanese army is probably unsurpassed by any army in the world. Actual service is, as in Germany, universal and obligatory, from the age of 20 to 40, with exemptions. One serves seven years and four months in the first line, then ten years in the Kobi, or Landwehr, and lastly two years and eight months in the Kokumin or Landsturm. On a peace footing in 1908 the army contained 225,000 men. In addition were 35,000 troops still in Korea and a permanent force in Formosa. After the Russo-Japanese war the peace strength was increased from 13 to 21 divisions. The navy is hardly inferior to the army. In 1908 it comprised 16 battleships, 3 building; 11 armored cruisers, 2 building; 17 cruisers, 2 building; 1 torpedo boat, 2 building; 22 destroyers, 26 building; and 47 modern torpedo boats. During the Russo-Japanese war, 8 Russian battleships and 3 Russian cruisers were captured.

The area of the five great islands which compose the Empire is 147,655 square miles. The population in 1904 was 46,732,138. The census discriminated as follows: imperial family not reckoned in the total, 66; nobles, 5,055; knights, 2,167,389; common people, 44,551,830.

1603. **Iyeyasu,** founder of the **Tokugawa dynasty,** accedes to the office of shogun; the dynasty remains in the ascendant until the revolution of 1868.
1605. Iyeyasu is succeeded by his son Hidetada.
1611. The **Dutch** begin a **trade with Japan** which is maintained during the period before the country is opened by treaty in 1856.
1614. Violent **persecution of the Christians** under an edict of Iyeyasu.
1622. A terrible massacre of the Christians occurs in Nagasaki.
1623. Hidetada is succeeded by his son Iyemitsu, who completes the **dual system of administration** instituted by his grandfather. It continues in force to the downfall of the Tokugawa dynasty, in 1868.
1639. The Portuguese are expelled from Japan; the Dutch are restricted in trade and residence to Nagasaki.
1650. Iyemitsu dies after having completed the **extermination of the Christians,** 31,000 of whom are massacred. For about two centuries Japan remains under the double government of the **shogun** and the **mikado;** the latter, the "Divine Emperor," living in Kyoto, is surrounded by a retinue of daimios, or nobles, and is regarded as the fountain of all honor and power, the source of titles and the representative of civil and religious authority. The shogun is the military ruler, being at the head of both the army and navy.
1707. The last eruption of Fujiyama occurs.
1853. Commodore **Matthew C. Perry** commands an expedition sent by the **United States** to Japan, and on March 31 of the following year concludes **a treaty of commerce** between the two nations. Like treaties with Great Britain and Russia are signed soon afterward.
1860. The **first Japanese embassy** is sent to the United States.
1863. The four treaty powers of France, Great Britain, Holland, and the United States join in punishing the daimio of Choshi for firing upon their vessels by bombarding his batteries at Shimonoseki. In addition they demand damages from the Shogun, though the government disavows the actions of its subordinate.
1867–68. The **great civil revolution** occurs, by which the Japanese shogunate is abolished and the supreme authority is vested in the Mikado only. The Mikado promises a new Imperial Constitution. A civil war ensues between the Imperialists and the partisans of the Shogun, which ends in the complete supremacy of the former.
1868. The new *meiji,* or year period of the emperor, begins, January 1.
1869. The Mikado removes his capital to Yeddo, the name of which is changed to Tokyo; he takes before his nobles the "charter oath." By a decree of the emperor the old *daimio* and *kugē* nobilities are abolished and their revenues restored to the imperial treasury.
1871. The feudal divisions of old Japan are abolished, and administrative prefectures take the place of daimiates. An imperial commission is sent to the United States, and is presented to the President; a **permanent Japanese embassy** is established at Washington. A mint is opened at Osaka.
1872. The Mikado, accompanied by a fleet of war steamers, visits Kyoto. He dresses in foreign style and informs himself of conditions by personal inspection. The Tokyo-Yokohama Railroad, the first railway in Japan, is opened. A system of military conscription is introduced and the army remodeled. In July an imperial proclamation is issued abolishing the old *Ji-Gisho* or Board of Religion, and declaring the **new religious code** of the empire to be founded simply on honor to the gods, love of country, reverence to the emperor, and obedience to duty. A law against nudity in cities is promulgated.
1873. **A general post office** is established and other **reformatory measures** for the improvement of the civil and social administration are introduced. The Gregorian calendar is accepted and the prohibition of Christianity is formally withdrawn by an edict of the Emperor. In July, a serious

rebellion occurs in Fukuoka, arising from the oppression of the farmers by the *Kusho*, or government officiary.

1874. An **expedition** is made into the interior of **Formosa** with a view to suppressing the native savages in the island who have put the authorities at defiance. The barbarians are put down, and in December the Japanese troops are withdrawn from Formosa. A **convention** is concluded with **China,** by which the terms of peace are defined and the Formosans obliged to pay $700,000 as "consolation money" for injuries to Japanese subjects.

1875. The Mitsubishi Steamship Company is established. Orders of knighthood are introduced. In July, a new treaty is concluded with Russia; the island of Sakhalin is ceded to Russia in exchange for a portion of the Kuril Islands. A proclamation is issued by the emperor declaring the final **extinction of feudalism** in Japan.

1876. The reorganization of the Japanese army is completed; the wearing of swords is interdicted. A treaty negotiated with Korea in February secures satisfaction for outrages on Japanese subjects there and recognizes Korea as an autonomous nation.

1877. The old conservatism in Japan produces a **temporary reaction** against the progressive policy of the imperial administration; in some provinces alarming symptoms of revolt are witnessed, and a few dangerous risings occur. In the island of Kiushu the Satsuma clan led by Saigo Takamori threaten to become revolutionary, but the insurgents are defeated and the rebellion is ended in September, though not until 12,000 lives have been sacrificed and $40,000,000 expended. A national exhibition of Arts and Industries is held in Tokyo.

1878. The censorship of the Japanese press is relaxed. On May 14, Okubo Toshimichi, minister of the interior, is assassinated in Tokyo. A serious mutiny of the soldiers occurs on the 23d of August, followed by a second on the 30th of the same month. The mutineers are taken; 53 are condemned to death and 66 to imprisonment. Many are visited with lesser punishments. As a preparation for the anticipated parliamentary government of the nation, local assemblies are authorized in the country for the discussion of minor administrative matters belonging to each *ken*.

1879. The king of Riu Kiu is brought a captive to Tokyo, and his kingdom is annexed.

1880. A serious **difficulty with China** respecting Japanese rights in the Riu Kiu or Liukiu islands is terminated with a peaceable settlement under which China resigns her claims to the group. A new ministry is constituted as a concession to the conservative reaction. The **first legal code** is published.

1881. A department of agriculture is added to the administrative offices. The postal and telegraph service is developed in accordance with European and American methods.

1882. Steps are taken by the imperial government for the holding at Bern, Switzerland, of an international conference with a view to revising the harsh and unjust treaty stipulations that have hitherto been imposed on Japan by the Western powers. The *Kaishinto* and *Jiyuto*, the liberal and radical parties of Japan, are organized.

1883. A commercial treaty with Korea is concluded.

1884. Orders of nobility on the European pattern are instituted. English is introduced into the common school curriculum. Consequent upon the rivalry between the conservative and liberal parties, political riots break out in the prefecture of Saitama, in which many persons are killed or wounded. Owing to the extension of Japanese influence in **Korea,** two political parties in that kingdom spring up, a pro-Japanese and an anti-Japanese party; and these break into open hostility at Seoul. Many lives are lost; the Koreans agree to pay $500,000 indemnity for the destruction of the buildings of the Japanese Legation.

1885. A **treaty with China** is ratified, May 7. An international money order agreement is made with the United States. German influence begins to predominate in Japanese reform measures.

1887. The **building of a war fleet** and the work of constructing coast defenses continues with great activity. The peace establishment of the army is increased to 59,086 officers and men. Count Inoué's negotiations for revision of treaties with European powers fail.

1889. The **new Imperial constitution,** promised under oath by the Mikado, April 6, 1868, is formally promulgated on February 11, in the midst of civic demonstrations and national jubilee. The constitution, consisting of 76 articles, revolutionizes and modernizes the ancient system, but preserves the empire under constitutional forms, establishing an Imperial Diet on the representative plan, and securing to the people the rights of citizenship. Viscount Mori Arinori, the progressive minister, is assassinated by a fanatic.

1890. The first great national election under the new constitution occurs on July 1. The Japanese pass the ordeal in quiet and decorum. The new government goes into operation under the direction of a responsible ministry.

1891. On October 28, the most destructive **earthquake** known since 1854 occurs, ruining towns and villages and killing in a few minutes about 8,000 people. Forty thousand square miles of territory are severely shaken.

1894. On June 20 the Japanese begin an **invasion of Korea;** ten days later the king of Korea declares himself independent of China and calls on Japan for aid. On July 23, however, the Japanese make the king a prisoner and on July 27 **war with China** is declared. The Chinese are defeated in a **naval battle** at Song-Hwan, July 30. The Japanese, after a signal naval victory off Haiyang Island, September 17, capture Port Arthur on Liaotung Promontory, November 21. During the winter they advance in two columns from this point and from the Yalu River upon Manchuria. (See CHINA.)
